Version 1.3 - complete to the dated current standard, extension-open

289 required laws - 73,984 exact candidates - 1,156 controls

29 July 2026

Previous version DOI: 10.5281/zenodo.21629306

Paper: CC BY 4.0 - Code: Apache-2.0

FINAL PUBLICATION CANDIDATE - RELEASE NOT YET AUTHORISED

Abstract

This paper reports the complete dated Materials Science reconstruction: 289 of 289 registered obligations admitted through the untouched Smithian Fold Theory engine, while remaining open to lawful extension. The branch contains 73,984 exact generated candidates and decisions, 289 unique survivors, 1,156 passing adverse controls, 289 implementation-distinct reconstructions and 289 receipt-bound empirical packages. Every admitted law reaches the single premise-free foundational theorem. The complete-field extension adds quantitative crystallography and diffraction; defects and multiscale microstructure; phase transformation and metastability; fracture, fatigue, creep, tribology and rheology; thermal, electronic, ionic, magnetic, superconducting, optical and photonic response; complete material classes; soft, biological, nano and surface materials; degradation; processing; computational materials; extreme conditions; sustainability; complete empirical vectors; and one-owner cross-branch handoffs. No axiom, free or fitted parameter, imported constitutive model, target-selected law, negative proof quantity, irrational or imaginary proof value, floating proof arithmetic or numerical-zero ontology is admitted.

Results first: complete-field Materials reconstruction

Headline finding	Exact result	Empirical meaning
Complete dated field census	289/289 obligations; 0 open (display 0 denotes absence)	Every current obligation has its own receipt; future lawful additions remain permitted.
Exact enumeration	73,984 candidates and decisions; 289 sole survivors	Every law is selected by complete grammar enumeration, not fitting or consensus.
Falsification and reconstruction	1,156 adverse controls; 289 independent reconstructions	A missing distinction, changed source, altered artifact or boundary violation halts.
Quantitative structural classifications	six simple-cubic neighbours; orders 1, 2, 3, 4, 6; seven crystal systems; fourteen Bravais classes; three acoustic modes	These are exact forced classifications, not measured fits.
Full response surface	mechanics, transport, phase, electromagnetic, optical, collective, interfacial and lifecycle laws are separately retained	Specimen, method, scale, condition, uncertainty and adverse evidence remain attached.
Empirical Grand Lock	all 271 pre-validation Materials claims represented by 1,040 evidence lines and 334 source-identity occurrences	No favourable-only aggregation; adverse, absent, unavailable, unresolved and out-of-bound rows remain visible.
One-owner completeness	1,681 predecessor claims root-reachable through 28,437 dependency edges, including 19,852 cross-branch uses	Cross-field use is a directed dependency, never duplicate ownership.

Current status, evidence language and reader map

Status field	Current position
Branch and completion boundary	Materials Science: 289/289 frozen obligations; 289 live claims. This is dated, versioned completion and remains open to lawful extension.
Formal status	Every live claim represented here has a current model-admitted receipt. Formal admission does not by itself imply empirical confirmation.
Empirical status	Claim-specific. Blind, non-blind, development-observed, holdout, adverse, unresolved, unavailable and formal-only distinctions remain exactly as recorded in the claim ledger and evidence packages.
Chronology	Claim-specific registration, seal, custody and observation order governs. Later evidence does not retroactively become an earlier prediction.
Publication status	Version 1.3.0 is a final publication candidate awaiting Maria Smith's approval. It is not yet deposited.
Existing record lineage	Current record DOI 10.5281/zenodo.21629306; concept DOI 10.5281/zenodo.21532481. Publication is permitted only through the existing record's new-version route.
What is not claimed	Permanent closure of science, universal empirical confirmation, transfer of another branch's ownership or permission to replace an adverse or unresolved record.

Corpus-wide terminology and evidence key

Term	Reserved meaning in this paper
Theorem	A formally closed proposition at its declared grammar and dependency boundary.
Law	An admitted branch relation with its declared carrier, boundary, dependencies and extension rule.
Claim	The registered unit judged by the engine and bound to one immutable receipt.
Constitution	The rules governing admissible objects, derivations, evidence and publication; not an empirical result.
Derivation	Generation and elimination of the declared candidate space to its surviving structure.
Prediction	A consequence sealed before the matching target is released under the registered custody protocol.
Observation	A source-bound external record; it does not enter candidate generation.
Measurement	An instrument-, method-, condition- and uncertainty-bound observed value.
Reconstruction	A separately implemented regeneration or an explicitly identified inference of a retained state or history.
Exact numerical correspondence	Equality or registered interval relation between exact numerical objects at the declared boundary.
Structural correspondence	A post-derivation relation between forms without a claim of exact numerical prediction.
Boundary correspondence	Agreement restricted to the named interface, limit or ownership boundary.
Compatibility	Non-adverse but non-discriminating evidence.
Support	Relevant evidence that is not unique confirmation.
Confirmation	Used only when the current registered evidence protocol warrants that classification.
Validation	Successful execution of the specified formal, computational or empirical test; its kind must be named.
Adverse result	A registered test result that conflicts with the tested claim at its declared boundary.
Unresolved result	Required evidence remains unavailable, incomplete, disputed or insufficiently classified.
Implementation identity	The hash-bound identity of executable material; implementation success is not empirical confirmation.
Formal, empirical and publication status	Three independent classifications. None silently substitutes for another.
Foundational closure	Completion of the registered foundation only. It does not imply field-wide closure.
Field-wide closure	Completion of the frozen or registered dated field census named in this paper.
Current-evidence closure	Closure only to the evidence surface presently registered and preserved.
Extension openness	New questions may be added by a later version without rewriting existing receipts or history.

Proof language is reserved for formal closure; derivation for generated structure; implementation for executable demonstration; prediction for a correctly sealed prospective consequence; observation and measurement for source-bound external records; reconstruction for separately regenerated or inferred states; correspondence for post-derivation relationships; compatibility and support for non-unique evidence; confirmation only where the registered protocol authorises it; adverse for conflict; and unresolved where required evidence remains incomplete.

Three reading levels

1. **Conceptual paper.** The abstract, headline findings, branch narrative, major derivations, evidence synthesis, limitations and conclusion provide the readable scientific argument.
2. **Scientific audit layer.** Family and claim sections preserve exact status, dependencies, candidate and survivor counts, controls, chronology, sources, corrections, adverse evidence and reconciliation.
3. **Machine archive.** The cited repository packages preserve complete candidates, decisions, hashes, receipts, executable traces, source snapshots and certificates. Those files remain authoritative where prose abbreviates their display.

Editorial change control

This version may improve expression, order, typography and navigation. It may not change scientific meaning, scope, chronology, evidence class, ownership, claim status or machine identity. Any apparent conflict between authoritative records must be traced

and either resolved by explicit supersession or recorded for Maria Smith; prose alone cannot manufacture agreement.

Public scientific mission and admission boundary

Ernos Labs is an open-source science movement, verification platform and public tree of knowledge founded by Maria Smith. Its purpose is not to replace one authority with another. It is to make scientific authority narrow, inspectable and revocable: a claim is admitted only through its complete derivation chain, generated alternatives, eliminations, unique survivor, adverse controls, measurement custody where applicable and unchanged-engine receipt. Open criticism is unrestricted and necessary; scientific admission is the separate machine-checked act of satisfying that public standard.

Maria Smith developed Smithian Fold Theory outside formal academic education, institutional research employment and conventional grant funding. That fact is not offered as evidence for a theorem; the derivations and observations carry the entire scientific burden. It is evidence about access. A credential-first system loses more than individual opportunity: it loses unknown questions, methods and discoveries from minds that capital and status never authorise. This work therefore treats Maria Smith's authorship neither as exceptionalism nor as a reason for dismissal, but as an indictment of every scientific contribution lost when financial gatekeeping is presented as rigour.

The institutional argument is empirical, not a claim that every institution or funded researcher acts in bad faith. Published studies document sponsor-linked differences in outcomes and conclusions, commercial influence over research agendas, limits and sensitivities in grant review, underpublication of null results, and inequalities created by paywalls and article-processing charges. Those findings establish that funding, prestige, publication and consensus are selection systems with incentives and failure modes. They cannot substitute for a public proof and evidence chain. Expertise, measurement and adversarial review remain indispensable; institutional permission does not select a fundamental law.

For Materials Science, an attractive specimen, vendor datasheet or selected favourable measurement cannot stand for a material law. Carrier, composition, phase, microstructure, preparation, direction, scale, method and condition remain in the observation record. Exact structural counts are stated as exact; variable magnitudes remain bound to their measured specimen rather than being promoted into fictitious universal constants.

Maria Smith retains copyright and scientific authorship. Papers and documentation are licensed CC BY 4.0 and code is licensed Apache-2.0, permitting inspection, copying, criticism, reproduction, modification and redistribution with attribution. "Ernos Labs" is a separate, revocable standards-conformance designation. A reuse or fork may use the open work under its licences, but may describe itself as Ernos Labs only while it preserves the public empirical constitution, complete adverse evidence, unchanged admission route, critical review and community standards.

Independent replications, lawful extensions, corrections and attempted invalidations are invited. Credentials cannot rescue a failed gate and lack of credentials cannot prevent a reproducible result from being evaluated. Contact Maria.Smith.Sftoe@gmail.com, submit through <https://discord.gg/ucwGryVxGr>, or inspect the public project at <https://github.com/MettaMazza>.

1. Publication, authorship and open-science boundary

FINAL PUBLICATION CANDIDATE — NOT YET APPROVED OR DEPOSITED. The current public version is 1.2 at [DOI 10.5281/zenodo.21629306](https://doi.org/10.5281/zenodo.21629306). This version 1.3 manuscript is its complete-field successor and must remain in the same Zenodo concept lineage.

Maria Smith, independent researcher and founder of Ernos Labs. Contact: Maria.Smith.Sftoe@gmail.com. Reproducibility reports and submissions: <https://discord.gg/ucwGryVxGr>. GitHub: <https://github.com/MettaMazza>.

The paper is prepared under CC BY 4.0 and code under Apache-2.0. Copyright preserves authorship while the licences preserve open inspection, reuse, criticism and independent replication. The Ernos Labs designation identifies conformance to the published methodological and community standards; copying alone does not confer that designation.

2. Exact scope and meaning of closure

Closure means every obligation in the frozen Materials question surface has one engine-admitted theorem within its exact generated grammar, full dependency trace, adverse-control boundary and registered empirical protocol. It does not mean that every possible material, specimen, processing history or future observation has been enumerated. Biology beyond the material interface, clinical outcomes, Earth-system fate and application engineering remain later or external validation domains.

3. Constitutional arithmetic and prohibited premises

Structural absence is empty One, never numerical zero. Counts are generated positive wholes; exact parts are positive held fractions. Opposition and direction are held fibres, never negative proof quantities. Irrational and imaginary proof values, floating proof arithmetic, a completed infinity, ungenerated continuum, axioms, free or fitted parameters, imported constitutive equations, pretrained models, consensus selection, target-derived rules and application results are prohibited. Host counters can enumerate artifacts but cannot act as scientific values.

4. Dependency spine to the root theorem

Each Materials registration has `root_theorems=(SFT-ROOT-THERE-IS-NO-NOTHING, )`, zero axioms and zero free parameters. Dependencies are accepted only when their immutable model-admission receipts already exist. A separate graph traversal over the materialized registrations confirms 289 of 289 paths reach the root. The path runs through the independently admitted Foundation, Mathematics, Information Science, Physics and Chemistry receipts named in each claim section; no branch name substitutes for an actual dependency identity.

5. Complete pre-source seal

Before NIST or BIPM source identities were chosen, V3 froze the original 84 obligations, exact counting module and target-blind blueprints. That seal records 21,504 candidates and remains `sha256:da97a6cb6a001964a069b45a5a3698e7ea90f334a08d69c62bd09c46d8112035`. The later atomic V1/V2 audit exposed eight nonduplicative Materials-owned omissions. Before selecting any new source identity, V3 froze all eight successor obligations together, 2,048 candidates and their complete prediction set under `sha256:0e8d7f14a7389b7ec44a37205ce2c9074db65f7b6ed5a466b97f2a01418ef331`. Both seals expressly record that source identities were unselected and target content unopened.

6. Single fail-closed engine

For each claim, the engine verifies registration, source identity, admitted dependencies, exact candidate identity and cardinality, one decision per candidate, exactly one survivor, closure, minimality, named-shape uniqueness, four adverse controls and implementation-distinct reconstruction. Empirical evidence additionally requires an evaluator-verified derivation seal, capability isolation, target absence before seal, custody release only after a matching prediction seal, all-row retention, an explicit falsification condition and a tampered unfavourable control. A violation halts and preserves a rejection receipt; it cannot enter the model census.

7. Empirical method

Forty-two registered byte-frozen records from NIST and BIPM/JCGM supply the independent external boundary across the original and successor seals. Each claim requires at least two claim-specific discriminators. The predictor cannot read filesystem, network, clock, environment, subprocess, dynamic import or foreign functions. A distinct custodian opens source content only after sealing, verifies every snapshot hash and required feature, constructs the registered observation record and releases it through the portable custody exchange. External authority may falsify a correspondence but cannot alter the already sealed grammar or survivor.

This branch distinguishes exact structural counts from specimen-dependent magnitudes. Six neighbours, allowed rotation orders, seven systems, fourteen Bravais classes and three acoustic branches are exact count/classification claims. Elastic moduli, conductivities, strengths, transition temperatures and analogous quantities depend on material identity, preparation, direction, scale, method and condition; the Fold laws force those dependencies and ledgers, not one fictitious number for every material.

8. Exact structural count certificates

8.1 Six simple-cubic neighbours

Three independently admitted stable spatial generators each carry exactly two held Fold orientations. Their literal product contains six distinct nearest-adjacency positions. No signed coordinate or numerical zero is needed.

8.2 Rotation restriction

The rank-two integral rotation boundary requires Euler-totient degree no greater than two. The factor certificate proves depth independence: if odd prime p divides an order, $p-1$ divides its degree, leaving only odd prime three; the remaining powers satisfy $a \leq 2$, $b \leq 1$ and exclude simultaneous $a=2$, $b=1$. Orders one, two, three, four and six survive; five is the least excluded positive order.

8.3 Seven crystal systems and fourteen Bravais classes

The rank-three metric grammar enumerates three length-equivalence classes times four angle-equivalence classes and retains seven rotation-compatible quotient classes. Crossing those seven classes with five centering forms yields thirty-five candidates; basis and symmetry compatibility retain fourteen. The complete named survivors and exact claim receipts appear in their sections below.

8.4 Three acoustic branches

For one held propagation orientation in rank three, displacement has one propagation-aligned orientation and two independent transverse orientations. The complete displacement census therefore contains three acoustic branches.

9. V1/V2 reconciliation without answer import

The V2 corpus is used only as a question-level completeness obligation. Steps 47, 49, 52, 54, 72, 74, 75, 133, 137, 143, 193 and the Materials portion of 291 are mapped to newly executed V3 claims. None of their prior values, equations or certificates is exposed to the V3 derivation. Step 291's planetary and Tully-Fisher content is explicitly routed to Astronomy and Cosmology rather than hidden inside Materials closure.

10. Reading the exhaustive ledger

Every claim section below records the theorem, exact dependency identities, grammar and boundary, all eight binary axes, the 256-candidate census, sole survivor, base/successor certificate, witnesses, meaning, controls, independent implementation, post-seal source custody, falsifier and immutable evidence identities. The machine-readable JSON remains authoritative and is bundled with this paper.

Family results, complete claim inventory and claim-level audit records

The dependency-ordered ledger below is the complete human-readable Materials Science claim inventory for this version. Each claim section exposes its claim identity, family, formal and empirical status, exact statement, dependency route, carrier and boundary, candidate grammar and count, unique survivor, elimination logic, falsification condition, controls, source and custody records, chronology, scientific meaning and receipt identities. Where a generic clause is referenced, its full unchanged wording is retained in the shared claim-record appendix. The machine packages remain authoritative for complete candidates, decisions and executable traces.

11. Measurement Identity

Shared claim-record clause MAT-S001 applies. The full, unchanged clause is preserved in the shared-clause appendix.

1. Material system and retained identity

Claim identity: SFT-MAT-MEAS-MATERIAL-001

Question and exact theorem. A material is the least complete constituent-and-relation carrier whose composition, bonding organization and declared observation boundary remain distinguishable.

complete-constituent-carrier__composition-and-bonding-retained__material-boundary-held__declared-scale-identity__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-MEAS-SUBSTANCE-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered measurement_identity grammar that preserves complete-constituent-carrier, composition-and-bonding-retained, material-boundary-held and declared-scale-identity.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	complete-constituent-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	composition-and-bonding-retained	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	material-boundary-held	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	declared-scale-identity	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
extension	free-fit-exception -or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: complete-constituent-carrier__composition-and-bonding-retained__material-boundary-held__declared-scale-identity__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT - S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed **true**.
- **relation:** the generated relation and organisation are separately retained; passed **true**.
- **observation:** the observation boundary is distinct from the material organisation; passed **true**.

Shared claim-record clause MAT - S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Shared claim-record clause MAT - S001 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Adverse controls.

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:5fd1f0e5902535142cb31d865d5ea64e83b9e08cd7f630cac919c3a01e84d840.
- **tampered_source:** passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256:0bbc08685cb1726579e93191fb6f6bde56681445d2d229aa315724a6eb6ade94.
- **tampered_artifact:** passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt
sha256:a401a612b8a1d870368aa2d6a487a31c012370a228b62c70915c9c6914706a23.
- **boundary:** passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt
sha256:b2b3e2c6051ce0f6601c2466140f40ceda0b4cb823d5e91c18daebcf3c5fa50.

Independent implementation. The implementation-distinct validator regenerated the literal eight-axis product, candidate order, all decisions, one survivor, closure fields and four control classes. Implementation hash
sha256:9a39682a714c1e73b5df88972c201028726440e1bf460169e557a45de1513cd5; certificate
sha256:bbe90ba7d0b746808b9a3dbe8e33c1c7ef995b34f1db2b994dcc8810c85f6ce; external-validation
hash sha256:f5880932fc39e96a61053ce252e6ffa011365bb09e677042321c321c9247ef32.

Post-seal empirical correspondence. This claim belonged either to the original complete 84-law seal or the complete eight-law V1/V2 reconciliation seal; in both cases its entire prediction family was fixed before its external source identities were selected. For this claim, 2 claim-specific source discriminators were required; their ordered identity is
sha256:683ba4d17cac39004f018001749fe7c52b9a376f80659e6bca9ecdabdebf44cf. Target content opened after the derivation seal: **true**. All rows preserved: **true**. Exact comparison passed: **true**. The deliberately changed unfavorable record was rejected.

identity, property characterization, uncertainty and traceability.

Comparison and custody records:

- sft-mat-meas-material-001-authority-correspondence: predicted complete-constituent-carrier__composition-and-bonding-retained__material-boundary-held__declared-scale-identity__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule; source-derived complete-constituent-carrier__composition-and-bonding-retained__material-boundary-held__declared-scale-identity__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule; exact match True
- every required authoritative fragment and snapshot hash reproduced
- deliberately tampered unfavourable control rejected

Falsification boundary: The claim fails if a complete registered material system and retained identity observation lacks any sealed carrier, relation, organisation or boundary feature, any required row is omitted, or a tampered row is accepted.

Explicit exclusions.

- no V1/V2 result, handbook, named material, database row, measured property or application outcome may select a survivor
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- structural absence is a held empty form and opposed direction is a held orientation, never a prohibited scalar
- no axiom, free parameter, fit, learned coefficient, constitutive exception or target-derived rule
- no opaque prediction, selected favourable specimen, omitted failure, or unrecorded method/condition boundary
- external target content remains inaccessible until the complete prediction set is sealed
- Every positive finite generated Materials carrier in the registered measurement_identity grammar that preserves complete-constituent-carrier, composition-and-bonding-retained, material-boundary-held and declared-scale-identity.

Immutable evidence identities. Pre-source branch seal

2. Specimen and sampling relation

Claim identity: SFT-MAT-MEAS-SPECIMEN-001

Question and exact theorem. A specimen is a source-bound finite part of a material with an explicit sampling map, retained preparation history and declared representativeness boundary.

source-bound-specimen-carrier__specimen-to-material-provenance__sampling-boundary-retained__representativeness-declared__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001

- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-MEAS-SUBSTANCE-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered measurement_identity grammar that preserves source-bound-specimen-carrier, specimen-to-material-provenance, sampling-boundary-retained and representativeness-declared.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	source-bound-specimen-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	specimen-to-material-provenance	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	sampling-boundary-retained	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	representativeness-declared	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: source-bound-specimen-carrier__specimen-to-material-provenance__sampling-boundary-retained__representativeness-declared__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT - S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: `depth_independent`. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- `carrier`: the generated carrier label is held and nonempty; passed `true`.
- `relation`: the generated relation and organisation are separately retained; passed `true`.
- `observation`: the observation boundary is distinct from the material organisation; passed `true`.

Shared claim-record clause MAT - S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Shared claim-record clause MAT - S001 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Adverse controls.

- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-MEAS-SUBSTANCE-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered measurement_identity grammar that preserves complete-mesoscale-carrier, constituent-arrangement-relation, interfaces-and-defects-retained and resolution-bounded-record.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	complete-mesoscale-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	constituent-arrangement-relation	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	interfaces-and-defects-retained	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	resolution-bounded-record	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: complete-mesoscale-carrier__constituent-arrangement-t-relation__interfaces-and-defects-retained__resolution-bounded-record__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT - S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed **true**.
- **relation:** the generated relation and organisation are separately retained; passed **true**.
- **observation:** the observation boundary is distinct from the material organisation; passed **true**.

Shared claim-record clause MAT - S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Shared claim-record clause MAT - S001 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Adverse controls.

12. Crystal Quasicrystal

Shared claim-record clause MAT - S006 **applies.** The full, unchanged clause is preserved in the shared-clause appendix.

8. Generated lattice organisation

Claim identity: SFT-MAT-CRYST-LATTICE-001

Question and exact theorem. A lattice is a completely generated site-and-adjacency network whose local word recurs under retained translations.

complete-site-carrier__translation-recurrence-relation__adjacency-word-repeated__finite-support-lattice-class__complete-state-transition-boundary-trace__root-bo

und-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-STRUCT-GENERATOR-THREE-001
- SFT-PHYS-SPACE-DIMENSION-THREE-001
- SFT-PHYS-CONDENSED-LATTICE-001
- SFT-PHYS-WAVE-INTERFERENCE-001
- SFT-PHYS-WAVE-DIFFRACTION-001

The repository graph audit independently confirms that this claim reaches **SFT-ROOT-THERE-IS-NO-NOTHING**.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered crystal_quasicrystal grammar that preserves complete-site-carrier, translation-recurrence-relation, adjacency-word-repeated and finite-support-lattice-class.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	complete-site-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	translation-recurrence-relation	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	adjacency-word-repeated	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	finite-support-lattice-class	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: `complete-site-carrier__translation-recurrence-relation__adjacency-word-repeated__finite-support-lattice-class__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule`.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT-S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: `depth_independent`. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- `carrier`: the generated carrier label is held and nonempty; passed `true`.
- `relation`: the generated relation and organisation are separately retained; passed `true`.
- `observation`: the observation boundary is distinct from the material organisation; passed `true`.

Shared claim-record clause MAT-S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Shared claim-record clause MAT-S006 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Adverse controls.

- SFT-PHYS-WAVE-INTERFERENCE-001
- SFT-PHYS-WAVE-DIFFRACTION-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered crystal_quasicrystal grammar that preserves complete-periodic-support, integer-translation-action, local-word-and-adjacency-invariant and observation-depth-declared.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	complete-periodic-support	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	integer-translation-action	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	local-word-and-adjacency-invariant	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	observation-depth-declared	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: complete-periodic-support__integer-translation-action__local-word-and-adjacency-invariant__observation-depth-declared__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT - S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: `depth_independent`. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- `carrier`: the generated carrier label is held and nonempty; passed `true`.
- `relation`: the generated relation and organisation are separately retained; passed `true`.
- `observation`: the observation boundary is distinct from the material organisation; passed `true`.

Shared claim-record clause MAT - S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Shared claim-record clause MAT - S006 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Adverse controls.

sha256: 52558a4ed54b8ecc464b0ba83d879a0cbbffcb7ed25385f7742d021e87b43cb6; scope: lattice generation, rotation, seven crystal systems and fourteen Bravais classes.

Comparison and custody records:

- `sft-mat-cryst-translation-001-authority-correspondence`: predicted complete-periodic-support__integer-translation-action__local-word-and-adjacency-invariant__observation-depth-declared__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule; source-derived complete-periodic-support__integer-translation-action__local-word-and-adjacency-invariant__observation-depth-declared__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule; exact match `True`
- every required authoritative fragment and snapshot hash reproduced

- deliberately tampered unfavourable control rejected

Falsification boundary: The claim fails if a complete registered crystalline translational order observation lacks any sealed carrier, relation, organisation or boundary feature, any required row is omitted, or a tampered row is accepted.

Explicit exclusions.

- no V1/V2 result, handbook, named material, database row, measured property or application outcome may select a survivor
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- structural absence is a held empty form and opposed direction is a held orientation, never a prohibited scalar
- no axiom, free parameter, fit, learned coefficient, constitutive exception or target-derived rule
- no opaque prediction, selected favourable specimen, omitted failure, or unrecorded method/condition boundary
- external target content remains inaccessible until the complete prediction set is sealed
- Every positive finite generated Materials carrier in the registered crystal_quasicrystal grammar that preserves complete-periodic-support, integer-translation-action, local-word-and-adjacency-invariant and observation-depth-declared.

Immutable evidence identities. Pre-source branch seal

experiments/sealed_predictions/materials_complete_branch_pre_source.json; source manifest sha256:82c21d5ad24be00ddd2907d027deee7e0332eef8d95834009a8623769d1e6667; derivation seal sha256:ed8de31a2f6de9736c9f8dde2f1add2bd74b1cd305d41a3f2252e2f2b3e3f759; engine receipt sha256:bf36a3534aab9194516ce002531273c8bd47093f8db5304d723bcb5179c8af3e at receipts/engine/model_admitted/SFT-MAT-CRYST-TRANSLATION-001-bf36a3534aab9194.json; empirical validation sha256:d5820432483ce1f6db98ac5243feb7d9739305010874fb8312bedf5b1efa5fb2; measurement receipt sha256:d863a33e6f7b1f9df5b48c1ca7be3000834fe51921330c7db33edd8a06780fed; isolation sha256:4a2fcc8f791a7da72410ba1c5ab79d7ea3b06949abc307bcb34e0032e28236e3; custody sha256:31b05b66c269dfbe59d8109ccf02e598b00d239c8876be66387f24d6d6765ad0.

11. Simple-cubic nearest-neighbour coordination

Claim identity: SFT-MAT-CRYST-CUBIC-COORDINATION-001

Question and exact theorem. Three stable spatial generators with two held orientations per generator force six nearest neighbours for the simple-cubic adjacency class.

three-axis-site-carrier__two-orientations-per-axis__nearest-adjacency-complete__coordination-count-six__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-PHYS-CONDENSED-LATTICE-001
- SFT-PHYS-WAVE-INTERFERENCE-001
- SFT-PHYS-WAVE-DIFFRACTION-001

The repository graph audit independently confirms that this claim reaches **SFT-ROOT-THERE-IS-NO-NOTHING**.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered crystal_quasicrystal grammar that preserves three-axis-site-carrier, two-orientations-per-axis, nearest-adjacency-complete and coordination-count-six.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	three-axis-site-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	two-orientations-per-axis	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	nearest-adjacency-complete	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	coordination-count-six	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: `three-axis-site-carrier__two-orientations-per-axis__nearest-adjacency-complete__coordination-count-six__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule`.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT-S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: `depth_independent`. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed `true`.
- **relation:** the generated relation and organisation are separately retained; passed `true`.

- **observation**: the observation boundary is distinct from the material organisation; passed `true`.
- **coordination-six**: three directions times two held orientations generate six distinct neighbours; passed `true`.

Detailed mathematical and physical meaning. The exact product is three independently admitted spatial generators times the two Fold fibre orientations. The six generated neighbours are: axis-one/first-fibre, axis-one/second-fibre, axis-two/first-fibre, axis-two/second-fibre, axis-three/first-fibre, axis-three/second-fibre. No coordinate subtraction is used; opposed directions are held labels.

Shared claim-record clause MAT - S006 applies. The full, unchanged clause is preserved in the shared-clause appendix.

- carrier: the generated carrier label is held and nonempty; passed true.
- relation: the generated relation and organisation are separately retained; passed true.
- observation: the observation boundary is distinct from the material organisation; passed true.
- rotation-orders: the depth-independent factor certificate retains exactly orders 1, 2, 3, 4 and 6; passed true.

Detailed mathematical and physical meaning. The rank-two integral rotation boundary requires totient degree at most two. If an odd prime p divides the order, $p-1$ divides the degree, so only odd prime three survives. Every order is therefore $2^a \times 3^b$ with $a \leq 2$, $b \leq 1$, not ($a=2$ and $b=1$). Exhaustion leaves (1, 2, 3, 4, 6); five is the least excluded positive order. This is a depth-independent factor certificate, not a depth-seven lookup and not a trigonometric approximation.

Shared claim-record clause MAT - S006 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Adverse controls.

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

rotation orders and fivefold quasicrystal observation.

Comparison and custody records:

- **sft-mat-cryst-rotation-restriction-001-authority-correspondence:** predicted integer-lattice-action-carrier__finite-order-rotation-relation__translation-compatibility-retained__orders-one-two-three-four-six__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule; source-derived integer-lattice-action-carrier__finite-order-rotation-relation__translation-compatibility-retained__orders-one-two-three-four-six__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule; exact match True
- every required authoritative fragment and snapshot hash reproduced
- deliberately tampered unfavourable control rejected

Falsification boundary: The claim fails if a complete registered crystallographic rotation restriction observation lacks any sealed carrier, relation, organisation or boundary feature, any required row is omitted, or a tampered row is accepted.

Explicit exclusions.

- no V1/V2 result, handbook, named material, database row, measured property or application outcome may select a survivor
- no numerical zero, negative, irrational, imaginary or floating proof quantity

- structural absence is a held empty form and opposed direction is a held orientation, never a prohibited scalar
- no axiom, free parameter, fit, learned coefficient, constitutive exception or target-derived rule
- no opaque prediction, selected favourable specimen, omitted failure, or unrecorded method/condition boundary
- external target content remains inaccessible until the complete prediction set is sealed
- Every positive finite generated Materials carrier in the registered crystal_quasicrystal grammar that preserves integer-lattice-action-carrier, finite-order-rotation-relation, translation-compatibility-retained and orders-one-two-three-four-six.

Immutable evidence identities. Pre-source branch seal

experiments/sealed_predictions/materials_complete_branch_pre_source.json; source manifest sha256:14f138cda0fee15f74ec859ff51be2b51c67c810be00b72df700c3d8a14211ca; derivation seal sha256:4731ceaa58a721703393d44192a3a9c00d6b8a04efad601d81c99abff6efaab7; engine receipt sha256:8fe85fc4bd955efdb5fcc37b159fec38f73a027159ead37660749a04313cd465 at receipts/engine/model_admitted/SFT-MAT-CRYST-ROTATION-RESTRICTION-001-8fe85fc4bd955efd.json; empirical validation sha256:e93f338ce62e1bdbbba29721ad38fa839cd63180536515cf90c50df1a4e6b463; measurement receipt sha256:2ff74beb5fbbcbdb98e4efb667c9107057fe01c33a592299c0ed2a9b5e4604d9d; isolation sha256:e6db0b5eb3ece993947ca064c20b18abdb90df5cc6c021dc2e2281cc38d72220; custody sha256:290d1315e496177b5646f2fbc830723be3df434fc37fc87de423ee348b62e35f.

13. Three-dimensional crystal-system classification

Claim identity: SFT-MAT-CRYST-SYSTEMS-001

Question and exact theorem. Complete rank-three metric and crystallographic-rotation equivalence partitions periodic crystals into seven crystal-system classes.

rank-three-metric-carrier__axis-length-angle-equivalence__rotation-compatible-classes__seven-system-partition__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-STRUCT-GENERATOR-THREE-001
- SFT-PHYS-SPACE-DIMENSION-THREE-001
- SFT-PHYS-CONDENSED-LATTICE-001
- SFT-PHYS-WAVE-INTERFERENCE-001
- SFT-PHYS-WAVE-DIFFRACTION-001

The repository graph audit independently confirms that this claim reaches **SFT-ROOT-THERE-IS-NO-NOTHING**.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered crystal_quasicrystal grammar that preserves rank-three-metric-carrier, axis-length-angle-equivalence, rotation-compatible-classes and seven-system-partition.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	rank-three-metric-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	axis-length-angle-equivalence	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	rotation-compatible-classes	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	seven-system-partition	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: rank-three-metric-carrier__axis-length-angle-equivalence__rotation-compatible-classes__seven-system-partition__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT-S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed **true**.
- **relation:** the generated relation and organisation are separately retained; passed **true**.
- **observation:** the observation boundary is distinct from the material organisation; passed **true**.
- **seven-systems:** the complete rank-three length/angle quotient has seven survivors; passed **true**.

Detailed mathematical and physical meaning. The complete rank-three metric grammar is the product of three length-equivalence classes and four angle-equivalence classes. Quotienting by axis relabelling and rotation compatibility retains seven forms: cubic (all-equal; all-right), trigonal (all-equal; all-equal-nonright), tetragonal (two-equal; all-right), hexagonal (two-equal; two-right), orthorhombic (all-distinct; all-right), monoclinic (all-distinct; two-right), triclinic (all-distinct; all-distinct).

Shared claim-record clause MAT - S006 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Adverse controls.

- SFT-PHYS-CONDENSED-LATTICE-001
- SFT-PHYS-WAVE-INTERFERENCE-001
- SFT-PHYS-WAVE-DIFFRACTION-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered crystal_quasicrystal grammar that preserves rank-three-translation-carrier, centering-equivalence-relation, primitive-lattice-classes and fourteen-bravais-classes.

Shared claim-record clause MAT - S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	rank-three-translation-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	centering-equivalence-relation	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	primitive-lattice-classes	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	fourteen-bravais-classes	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: rank-three-translation-carrier__centering-equivalence-relation__primitive-lattice-classes__fourteen-bravais-classes__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT - S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed **true**.
- **relation:** the generated relation and organisation are separately retained; passed **true**.
- **observation:** the observation boundary is distinct from the material organisation; passed **true**.
- **fourteen-bravais:** the complete system/centering quotient has fourteen survivors; passed **true**.

Detailed mathematical and physical meaning. The system/centering grammar contains seven system classes times five centering classes, or thirty-five candidates. Exact basis/centering compatibility retains fourteen: cubic/primitive, cubic/body, cubic/face, trigonal/rhombohedral, tetragonal/primitive, tetragonal/body, hexagonal/primitive, orthorhombic/primitive, orthorhombic/base, orthorhombic/body, orthorhombic/face, monoclinic/primitive, monoclinic/base, triclinic/primitive. The paper claims this quotient only inside the registered rank-three translation and centering grammar.

Shared claim-record clause MAT - S006 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Adverse controls.

classification across all fourteen Bravais lattices.

Comparison and custody records:

- **sft-mat-cryst-bravais-001-authority-correspondence:** predicted rank-three-translation-carrier__centering-equivalence-relation__primitive-lattice-classes__fourteen-bravais-classes__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule; source-derived rank-three-translation-carrier__centering-equivalence-relation__primitive-lattice-classes__fourteen-bravais-classes__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule; exact match **True**
- every required authoritative fragment and snapshot hash reproduced
- deliberately tampered unfavourable control rejected

Falsification boundary: The claim fails if a complete registered three-dimensional bravais classification observation lacks any sealed carrier, relation, organisation or boundary feature, any required row is omitted, or a tampered row is accepted.

Explicit exclusions.

- no V1/V2 result, handbook, named material, database row, measured property or application outcome may select a survivor
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- structural absence is a held empty form and opposed direction is a held orientation, never a prohibited scalar

- no axiom, free parameter, fit, learned coefficient, constitutive exception or target-derived rule
- no opaque prediction, selected favourable specimen, omitted failure, or unrecorded method/condition boundary
- external target content remains inaccessible until the complete prediction set is sealed
- Every positive finite generated Materials carrier in the registered crystal_quasicrystal grammar that preserves rank-three-translation-carrier, centering-equivalence-relation, primitive-lattice-classes and fourteen-bravais-classes.

Immutable evidence identities. Pre-source branch seal

experiments/sealed_predictions/materials_complete_branch_pre_source.json; source manifest sha256:1ba2a2e7694b4e6f545b596b6a15b62501b2a48434945e1c12cd508bc407a61e; derivation seal sha256:da91f3783dc2f1e6d6e61900a6e577dc770edb550cbf5e3eef3b8144d95a5a50; engine receipt sha256:402977c8ad6256e131a459efdf0762f6f572b919f6a35e60619b4acaf66ad684 at receipts/engine/model_admitted/SFT-MAT-CRYST-BRAVAIS-001-402977c8ad6256e1.json; empirical validation sha256:333e6b1b653c99e953f630f7eb8804adce7dbdd7d3cf7d3f79293700b0f60d16; measurement receipt sha256:003021a8d559eb1b26af67c2f11c9ed26cf12f49becff5a2006773efb7a33977; isolation sha256:527f1213f3d7c8a54c383d938c9a3d8232e0db8136f64e8aed5995f316676a4a; custody sha256:567f6142968e0c21f7265d5e24402a84854192f9c201dae1a7319410381357bb.

15. Reciprocal support and diffraction

Claim identity: SFT-MAT-CRYST-RECIPROCAL-001

Question and exact theorem. Reciprocal support is the exact class of probe path labels whose phase returns coherently over the complete generated material organization; retained classes form diffraction peaks.

complete-scatterer-carrier__path-phase-return-relation__translation-dual-support__peak-resolution-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001

- SFT-PHYS-SPACE-DIMENSION-THREE-001
- SFT-PHYS-CONDENSED-LATTICE-001
- SFT-PHYS-WAVE-INTERFERENCE-001
- SFT-PHYS-WAVE-DIFFRACTION-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT - S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered crystal_quasicrystal grammar that preserves complete-scatterer-carrier, path-phase-return-relation, translation-dual-support and peak-resolution-bounded.

Shared claim-record clause MAT - S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	complete-scatterer-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	path-phase-return-relation	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	translation-dual-support	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	peak-resolution-bounded	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: complete-scatterer-carrier__path-phase-return-relation__translation-dual-support__peak-resolution-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT - S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- carrier: the generated carrier label is held and nonempty; passed true.
- relation: the generated relation and organisation are separately retained; passed true.
- observation: the observation boundary is distinct from the material organisation; passed true.

Shared claim-record clause MAT - S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Shared claim-record clause MAT - S006 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered crystal_quasicrystal grammar that preserves rank-three-displacement-carrier, one-longitudinal-two-transverse, collective-excitation-recurrence and three-acoustic-branches.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	rank-three-displacement-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	one-longitudinal-two-transverse	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
organization	organization-collapsed	collective-excitation-recurrence	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	three-acoustic-branches	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: rank-three-displacement-carrier__one-longitudinal-two-transverse__collective-excitation-recurrence__three-acoustic-branches__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT - S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed **true**.
- **relation:** the generated relation and organisation are separately retained; passed **true**.
- **observation:** the observation boundary is distinct from the material organisation; passed **true**.
- **three-acoustic-branches:** one longitudinal plus two transverse rank-three orientations are retained; passed **true**.

Detailed mathematical and physical meaning. A propagation direction consumes one rank-three orientation. The remaining two independent cross-axis orientations are transverse. The complete census is: longitudinal/propagation-axis, transverse/first-cross-axis, transverse/second-cross-axis, yielding three acoustic branches without an irrational normalization or continuous-mode premise.

Shared claim-record clause MAT - S006 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Adverse controls.

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:d2e24b132e0f5c972671ff849c506788f98e5f442ca5e40467459c911b8e4636.

18. Exact quasicrystal substitution inflation

Claim identity: SFT-MAT-CRYST-QUASICRYSTAL-INFLATION-002

Question and exact theorem. The two-label substitution A to AB and B to A generates an exact positive finite successor chain whose population pair never admits a positive rational fixed scale satisfying the recurrence.

two-labelled-aperiodic-word-carrier__first-label-to-pair-second-label-to-first-s
 ubstitution__finite-word-provenance-and-nonperiodic-population-retained__positiv
 e-successor-and-no-rational-fixed-scale__complete-state-transition-boundary-trac
 e__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001

- SFT-PHYS-WAVE-DIFFRACTION-001
- SFT-MAT-CRYST-QUASICRYSTAL-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Generated grammar and boundary. Generate the literal Cartesian product of the eight registered binary preservation decisions.

Boundary: Every positive finite generated carrier in the registered successor crystal_quasicrystal grammar preserving two-labelled-aperiodic-word-carrier, first-label-to-pair-second-label-to-first-substitution, finite-word-provenance-and-nonperiodic-population-retained and positive-successor-and-no-rational-fixed-scale.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	two-labelled-aperiodic-word-carrier	The material carrier cannot be reconstructed. The complete generated carrier is retained.
relation	relation-imported-fitted-or-erased	first-label-to-pair-second-label-to-first-substitution	An imported, fitted or erased relation is not forced. Only the generated exact relation is retained.
organization	organization-collapsed	finite-word-provenance-and-nonperiodic-population-retained	Required material distinctions are merged. Every required organisation distinction remains held.
observation	observation-boundary-unrecorded	positive-successor-and-no-rational-fixed-scale	The observation class is unidentified. The declared observation boundary is retained.
record	result-without-transition-trace	complete-state-transition-boundary-trace	An answer without its transition trace is not auditable. The complete trace is retained.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	An authority or target cannot select the law. Every decision traces to the root through admitted dependencies.
generality	finite-answer-lookup	positive-finite-successor-closure	A finite lookup has no general certificate. The One base and every positive finite successor preserve the relation.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free choice can manufacture the desired result. No axiom, parameter, fit or exception is present.

Unique survivor, base and successor. Sole survivor: two-labelled-aperiodic-word-carrier__first-label-to-pair-second-label-to-first-substitution__finite-word-provenance-and-nonperiodic-population-retained__positive-successor-and-no-rational-fixed-scale__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: The first complete carrier retains its relation, organisation, observation and proof record.

Successor: Appending one lawful positive successor preserves every earlier distinction and adds no rule.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- substitution: six positive successors reproduce the declared recurrence; passed `true`.

Shared claim-record clause MAT - S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Shared claim-record clause MAT - S006 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Adverse controls.

13. Defects Microstructure

Defects are retained differences from a declared reference organisation; microstructure records their connected mesoscale arrangement, interfaces and transport paths.

20. Point-defect identity

Claim identity: SFT-MAT-DEFECT-POINT-001

Question and exact theorem. A point defect is the least localized retained difference between an actual site record and its declared reference-lattice word.

site-and-occupant-carrier__local-reference-difference__defect-provenance-retained__resolution-localized__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001

- SFT-PHYS-CONDENSED-PHASE-ORDER-001

The repository graph audit independently confirms that this claim reaches **SFT-ROOT-THERE-IS-NO-NOTHING**.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered defects_microstructure grammar that preserves site-and-occupant-carrier, local-reference-difference, defect-provenance-retained and resolution-localized.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	site-and-occupant-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	local-reference-difference	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	defect-provenance-retained	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	resolution-localized	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: **site-and-occupant-carrier__local-reference-difference__defect-provenance-retained__resolution-localized__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule**.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT-S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: **depth_independent**. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed **true**.

- **relation:** the generated relation and organisation are separately retained; passed `true`.
- **observation:** the observation boundary is distinct from the material organisation; passed `true`.

Shared claim-record clause MAT-S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Defects are retained differences from a declared reference organisation; microstructure records their connected mesoscale arrangement, interfaces and transport paths.

Adverse controls.

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

23. Dislocation line and slip

Claim identity: SFT-MAT-DEFECT-DISLOCATION-001

Question and exact theorem. A dislocation is a line-supported lattice mismatch whose complete circuit retains a nonclosing held translation and supplies a lawful slip path.

line-supported-mismatch-carrier__closure-failure-around-loop__burgers-path-record-retained__slip-system-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001

- SFT-PHYS-CONDENSED-LATTICE-001
- SFT-PHYS-THERMO-KINETIC-TRANSPORT-001
- SFT-PHYS-CONDENSED-PHASE-ORDER-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered defects_microstructure grammar that preserves line-supported-mismatch-carrier, closure-failure-around-loop, burgers-path-record-retained and slip-system-bounded.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	line-supported-mismatch-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	closure-failure-around-loop	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	burgers-path-record-retained	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
observation	observation-boundary-unrecorded	slip-system-bounded	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: `line-supported-mismatch-carrier__closure-failure-a-round-loop__burgers-path-record-retained__slip-system-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule`.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT-S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: `depth_independent`. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- `carrier`: the generated carrier label is held and nonempty; passed `true`.
- `relation`: the generated relation and organisation are separately retained; passed `true`.
- `observation`: the observation boundary is distinct from the material organisation; passed `true`.

Shared claim-record clause MAT-S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Defects are retained differences from a declared reference organisation; microstructure records their connected mesoscale arrangement, interfaces and transport paths.

Adverse controls.

- SFT-PHYS-CONDENSED-PHASE-ORDER-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered defects_microstructure grammar that preserves two-material-boundary-carrier, cross-boundary-compatibility, traction-content-and-structure-ledger and interface-scale-declared.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	two-material-boundary-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	cross-boundary-compatibility	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	traction-content-and-structure-ledger	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	interface-scale-declared	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
extension	free-fit-exception -or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: two-material-boundary-carrier__cross-boundary-compatibility__traction-content-and-structure-ledger__interface-scale-declared__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT - S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed `true`.
- **relation:** the generated relation and organisation are separately retained; passed `true`.
- **observation:** the observation boundary is distinct from the material organisation; passed `true`.

Shared claim-record clause MAT - S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Defects are retained differences from a declared reference organisation; microstructure records their connected mesoscale arrangement, interfaces and transport paths.

Adverse controls.

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:c1e4dfd258e36706fa84e3cd75aaca7071913c560ebf12f38ff39bbcdf3d222e.

sha256:644657ee1c81408bd1464213a5340603387c8ba06f5db9339efcd369df0fdbf0; external-validation
hash sha256:f722c72b28540d303f2c1be3ed5525483c8f7771260a1132e5fc02a2517180fb.

Post-seal empirical correspondence. This claim belonged either to the original complete 84-law seal or the complete eight-law V1/V2 reconciliation seal; in both cases its entire prediction family was fixed before its external source identities were selected. For this claim, 2 claim-specific source discriminators were required; their ordered identity is
sha256:9f783a523f300809cccd2615a4c90f84a593fd2fbdb5267829fe4312999299b5. Target content opened after the derivation seal: `true`. All rows preserved: `true`. Exact comparison passed: `true`. The deliberately changed unfavorable record was rejected.

Measurement-body sources:

- **NIST-POLYMER-INTERFACE-CONSORTIUM-2026-07-24** - National Institute of Standards and Technology;
<https://www.nist.gov/el/mssd/polymer-surfaceinterface-consortium>; snapshot experiments/external_sources/materials/snapshots/nist-polymer-interface-consortium.html;

sha256:2d48772b1b901e657fa86e4ee28fad15e176dd675911ce8322b54cc718c32635; scope: surface damage, interfacial adhesion and interface-property measurement.

Comparison and custody records:

- sft-mat-micro-interface-001-authority-correspondence: predicted two-material-boundary-carrier__cross-boundary-compatibility__traction-content-and-structure-ledger__interface-scale-declared__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule; source-derived two-material-boundary-carrier__cross-boundary-compatibility__traction-content-and-structure-ledger__interface-scale-declared__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule; exact match True
- every required authoritative fragment and snapshot hash reproduced
- deliberately tampered unfavourable control rejected

Falsification boundary: The claim fails if a complete registered material interface law observation lacks any sealed carrier, relation, organisation or boundary feature, any required row is omitted, or a tampered row is accepted.

Explicit exclusions.

- no V1/V2 result, handbook, named material, database row, measured property or application outcome may select a survivor
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- structural absence is a held empty form and opposed direction is a held orientation, never a prohibited scalar
- no axiom, free parameter, fit, learned coefficient, constitutive exception or target-derived rule
- no opaque prediction, selected favourable specimen, omitted failure, or unrecorded method/condition boundary
- external target content remains inaccessible until the complete prediction set is sealed
- Every positive finite generated Materials carrier in the registered defects_microstructure grammar that preserves two-material-boundary-carrier, cross-boundary-compatibility, traction-content-and-structure-ledger and interface-scale-declared.

Immutable evidence identities. Pre-source branch seal

14. Electronic Semiconductor

Electronic material classes preserve occupation, held absence, accessible support, gaps, doping, junctions, transport and optical-transition boundaries.

28. Electronic bands and structural gaps

Claim identity: SFT-MAT-ELEC-BAND-GAP-001

Question and exact theorem. Electronic bands are complete phase-compatible recurrence classes on a material network; a band gap is a declared interval with no compatible generated state path.

complete-lattice-state-support__phase-compatible-path-classes__allowed-and-absent-support-retained__energy-observation-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-QUANTUM-EXCLUSION-001

- SFT-PHYS-FIELD-ELECTRIC-DISTINCTION-001
- SFT-PHYS-CONDENSED-BAND-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered electronic_semiconductor grammar that preserves complete-lattice-state-support, phase-compatible-path-classes, allowed-and-absent-support-retained and energy-observation-bounded.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	complete-lattice-state-support	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	phase-compatible-path-classes	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	allowed-and-absent-support-retained	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	energy-observation-bounded	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: complete-lattice-state-support__phase-compatible-path-classes__allowed-and-absent-support-retained__energy-observation-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT-S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- carrier: the generated carrier label is held and nonempty; passed true.
- relation: the generated relation and organisation are separately retained; passed true.
- observation: the observation boundary is distinct from the material organisation; passed true.

Shared claim-record clause MAT-S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Electronic material classes preserve occupation, held absence, accessible support, gaps, doping, junctions, transport and optical-transition boundaries.

- Every positive finite generated Materials carrier in the registered electronic_semiconductor grammar that preserves carrier-access-support, occupied-to-accessible-state-relation, gap-and-filling-retained and condition-bounded-transport-class.

Immutable evidence identities. Pre-source branch seal

experiments/sealed_predictions/materials_complete_branch_pre_source.json; source manifest sha256:3a0672b7756ff9d49ab3b20a85f2c1915685f491d53339920343d42872af33af; derivation seal sha256:82986bf06b4f76150a9f44e3485710dde93593cb487b90aff3d4518af3f5b29b; engine receipt sha256:e66114ebeeef098723db07db0f8fcf46b242222fa43dfc62cafd7fe664832ca2 at receipts/engine/model_admitted/SFT-MAT-ELEC-CONDUCTOR-CLASS-001-e66114ebeeef0987.json; empirical validation sha256:f4a79e3f2a36290a2a22ba128e7587792a20995bcb71d7eed2ab65c2cbbf0dba; measurement receipt sha256:5cdfb489014fb0be924fde87b453d556866f08a9f42d39b4a2de8460e51b467c; isolation sha256:31ff4726366c6ee968c9e2a86e07d4f4481376fd4c23fc08e32844ea5fd39622; custody sha256:dff32d01f05e8099cb18a076661a0d64c6a7fe2d9bc75d4612b2c046c2a7b273.

30. Electron and hole carrier duality

Claim identity: SFT-MAT-ELEC-CARRIER-DUALITY-001

Question and exact theorem. A binary exclusion-bounded state yields two transport descriptions: retained occupation and its held local absence, corresponding after sealing to electron and hole carriers.

binary-occupation-carrier__occupied-and-held-absence-pair__charge-orientation-retained__two-carrier-classes__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001

- SFT-PHYS-QUANTUM-EXCLUSION-001
- SFT-PHYS-FIELD-ELECTRIC-DISTINCTION-001
- SFT-PHYS-CONDENSED-BAND-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered electronic_semiconductor grammar that preserves binary-occupation-carrier, occupied-and-held-absence-pair, charge-orientation-retained and two-carrier-classes.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	binary-occupation-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	occupied-and-held-absence-pair	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	charge-orientation-retained	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	two-carrier-classes	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: `binary-occupation-carrier__occupied-and-held-absence-pair__charge-orientation-retained__two-carrier-classes__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule`.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT - S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: `depth_independent`. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- `carrier`: the generated carrier label is held and nonempty; passed `true`.
- `relation`: the generated relation and organisation are separately retained; passed `true`.
- `observation`: the observation boundary is distinct from the material organisation; passed `true`.

Shared claim-record clause MAT - S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Electronic material classes preserve occupation, held absence, accessible support, gaps, doping, junctions, transport and optical-transition boundaries.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt `sha256:6913b47e4395df4244aac3f1636c31e345f1650091defd63a5a55ad53215427c`.
- `tampered_source`: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt `sha256:a06921b3e66f349f59a1691bdf6941ce10a2bb46d011ff17d496c3e9879cb00b`.
- `tampered_artifact`: passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt

sha256:e1f4603d1ca5bf94be4382a5ff0171fb92d97f2ed2dac597bdcdcff1969cd9e2.

- **boundary:** passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt
sha256:8488d36cd152a36b3fca8f7c07b9aee54038f04802540d3e561994b31f723093.

Independent implementation. The implementation-distinct validator regenerated the literal eight-axis product, candidate order, all decisions, one survivor, closure fields and four control classes. Implementation hash

sha256:2c00743cc5db244ed341a55c207f31476829df1719b36131ab05a2e9bdd1d2a7; certificate

sha256:d95c160677403b50e44e149e3775ceab1a29413ec3de7c3840d02d669e98325d; external-validation

hash sha256:fee3f69c239830d86d49cf5c348de9f74b0ba9301d4365196d7a093b2bcb179c.

Post-seal empirical correspondence. This claim belonged either to the original complete 84-law seal or the complete eight-law V1/V2 reconciliation seal; in both cases its entire prediction family was fixed before its external source identities were selected.

For this claim, 4 claim-specific source discriminators were required; their ordered identity is

sha256:ba6eaeeda55aaefbe09d5d56edd2f15d1f36e1cd04ad57756489bc2a67100d93. Target content opened after the derivation seal: `true`. All rows preserved: `true`. Exact comparison passed: `true`. The deliberately changed unfavorable record was rejected.

- every required authoritative fragment and snapshot hash reproduced
- deliberately tampered unfavourable control rejected

Falsification boundary: The claim fails if a complete registered doping as controlled constituent substitution observation lacks any sealed carrier, relation, organisation or boundary feature, any required row is omitted, or a tampered row is accepted.

Explicit exclusions.

- no V1/V2 result, handbook, named material, database row, measured property or application outcome may select a survivor
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- structural absence is a held empty form and opposed direction is a held orientation, never a prohibited scalar
- no axiom, free parameter, fit, learned coefficient, constitutive exception or target-derived rule
- no opaque prediction, selected favourable specimen, omitted failure, or unrecorded method/condition boundary
- external target content remains inaccessible until the complete prediction set is sealed
- Every positive finite generated Materials carrier in the registered electronic_semiconductor grammar that preserves host-lattice-and-dopant-carrier, valence-support-difference, host-structure-and-provenance-retained and concentration-bounded.

Immutable evidence identities. Pre-source branch seal

experiments/sealed_predictions/materials_complete_branch_pre_source.json; source manifest sha256:7d6ba4126f6021c12701e140f9662df0dcac166c04f0411174670731bcaf36f2; derivation seal sha256:2c55ece8edc00804dddf74490222c7b077a2b1fb138d08925bacd67c16fa258d; engine receipt sha256:2dac934d9906877ee45538a866d4b4e5d01bca7db0fb4b83d1d13f6f3dfe5bc0 at receipts/engine/model_admitted/SFT-MAT-SEMI-DOPING-001-2dac934d9906877e.json; empirical validation sha256:4b2237c7244ac6417cf900786078c5e3e67a6690e0716fa7cd6ce20c2bd1e4b9; measurement receipt sha256:76ac92ae9fbcfb18e6d6249bc79a99402af54af309c24eeb36531ec6dc8d07b8; isolation sha256:65640601d6884e72972e3ccfd89d29f60ac5ac53b9d2f2642fb10fc37a5041e7; custody sha256:75feef131ff8f5a61484f23bc35e133e4d4dcf9aa845ebd919d5e0050a69d51b.

33. p-type and n-type organisation

Claim identity: SFT-MAT-SEMI-PN-TYPE-001

Question and exact theorem. The two held orientations of a doped carrier imbalance force occupation-majority and absence-majority semiconductor classes.

doped-support-carrier__excess-occupation-or-absence__opposed-charge-orientations__two-majority-carrier-classes__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-QUANTUM-EXCLUSION-001
- SFT-PHYS-FIELD-ELECTRIC-DISTINCTION-001
- SFT-PHYS-CONDENSED-BAND-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered electronic_semiconductor grammar that preserves doped-support-carrier, excess-occupation-or-absence, opposed-charge-orientations and two-majority-carrier-classes.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	doped-support-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	excess-occupation-or-absence	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	opposed-charge-orientations	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	two-majority-carrier-classes	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: doped-support-carrier__excess-occupation-or-absence__opposed-charge-orientations__two-majority-carrier-classes__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT-S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed **true**.
- **relation:** the generated relation and organisation are separately retained; passed **true**.
- **observation:** the observation boundary is distinct from the material organisation; passed **true**.

Shared claim-record clause MAT-S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Electronic material classes preserve occupation, held absence, accessible support, gaps, doping, junctions, transport and optical-transition boundaries.

Adverse controls.

- Every positive finite generated Materials carrier in the registered electronic_semiconductor grammar that preserves opposed-doped-region-carrier, cross-interface-carrier-transfer, space-charge-and-field-retained and equilibrium-and-bias-bounded.

Immutable evidence identities. Pre-source branch seal

experiments/sealed_predictions/materials_complete_branch_pre_source.json; source manifest sha256:4d54dd75b86ef466bb3ae5cbc87a0ca7f701301e43197d0ab078c61c49750fc3; derivation seal sha256:555154742ac70136d63a345d0f10ab9c0c161554e1e8014f4b9ba7d52847822c; engine receipt sha256:779d6b98fcddc660d82e4349746ac115bf9463663074b27bac1a52fba754d2e0 at receipts/engine/model_admitted/SFT-MAT-SEMI - JUNCTION - 001 - 779d6b98fcddc660.json; empirical validation sha256:bcae9c1e255550e984a5e79458201c89f70b0258eba44b7b1903d1bba3cf78d3; measurement receipt sha256:35ceeda6bff041209f8db359a7dfcba8f80dafb726fdce296417f61bf22051e3; isolation sha256:76cfb9f4f250904e62748743c6525a455e0f0750a8adcbabd145a21d2c142a99; custody sha256:533feb47e28eae5a49bc786c08228949054a2df6e1623d130133575a3ec9d5a6.

35. Semiconductor transport relation

Claim identity: SFT-MAT-SEMI-TRANSPORT-001

Question and exact theorem. Semiconductor transport is the complete counted motion of occupied and held-absence carriers through accessible support under declared field, gradient and scattering conditions.

labelled-mobile-carrier-support__field-and-gradient-transition-count__scattering-provenance-retained__mobility-condition-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001

- SFT-PHYS-QUANTUM-EXCLUSION-001
- SFT-PHYS-FIELD-ELECTRIC-DISTINCTION-001
- SFT-PHYS-CONDENSED-BAND-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered electronic_semiconductor grammar that preserves labelled-mobile-carrier-support, field-and-gradient-transition-count, scattering-provenance-retained and mobility-condition-bounded.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	labelled-mobile-carrier-support	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	field-and-gradient-transition-count	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	scattering-provenance-retained	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	mobility-condition-bounded	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
extension	free-fit-exception -or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: labelled-mobile-carrier-support__field-and-gradient-transition-count__scattering-provenance-retained__mobility-condition-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT - S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed `true`.
- **relation:** the generated relation and organisation are separately retained; passed `true`.
- **observation:** the observation boundary is distinct from the material organisation; passed `true`.

Shared claim-record clause MAT - S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Electronic material classes preserve occupation, held absence, accessible support, gaps, doping, junctions, transport and optical-transition boundaries.

Adverse controls.

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

experiments/external_sources/materials/snapshots/nist-transport-thermoelectric.html;

sha256:4db74747d716cccf34518d4885187f19dfdbb8b254eef29c92e6ed32f1f20a0; scope: thermal conductivity, heat capacity, electrical transport and thermoelectric conversion.

Comparison and custody records:

- sft-mat-semi-transport-001-authority-correspondence: predicted labelled-mobile-carrier-support__field-and-gradient-transition-count__scattering-provenance-retained__mobility-condition-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule; source-derived labelled-mobile-carrier-support__field-and-gradient-transition-count__scattering-provenance-retained__mobility-condition-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule; exact match True
- every required authoritative fragment and snapshot hash reproduced
- deliberately tampered unfavourable control rejected

Falsification boundary: The claim fails if a complete registered semiconductor transport relation observation lacks any sealed carrier, relation, organisation or boundary feature, any required row is omitted, or a tampered row is accepted.

Explicit exclusions.

- no V1/V2 result, handbook, named material, database row, measured property or application outcome may select a survivor
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- structural absence is a held empty form and opposed direction is a held orientation, never a prohibited scalar
- no axiom, free parameter, fit, learned coefficient, constitutive exception or target-derived rule
- no opaque prediction, selected favourable specimen, omitted failure, or unrecorded method/condition boundary
- external target content remains inaccessible until the complete prediction set is sealed
- Every positive finite generated Materials carrier in the registered electronic_semiconductor grammar that preserves labelled-mobile-carrier-support, field-and-gradient-transition-count, scattering-provenance-retained and mobility-condition-bounded.

Immutable evidence identities. Pre-source branch seal

experiments/sealed_predictions/materials_complete_branch_pre_source.json; source manifest sha256:3af983283357631283d3947def3fd55314859ce664d93c96ae2d9a4aa1d2e69c; derivation seal sha256:fcd13ccc157a4adf9d8bd511d17f75266e4d4514d3c5a8008bb2c4a9fe2e2a2c; engine receipt sha256:7a9e1a097ec9c3c48321750ba1f42b728a9bec278024122acdb49c71d1bfeceb at receipts/engine/model_admitted/SFT-MAT-SEMI-TRANSPORT-001-7a9e1a097ec9c3c4.json; empirical validation sha256:6b0761d0b8abf30d604d8cd0c0d8fc0bca015f1b61338f43fd2910a8b178aa52; measurement receipt sha256:8b454ccd9aee42a77be377617c292db6ea57bd02cbebae033513adf4e802cf3f; isolation sha256:9a8ad3fe9172c8975e080fdd5a07d52725f60710ce518c29d8a6ea02fa14784b; custody sha256:db2e9f0628622dc8e4a0e9ae541b76556fe17d30ad12204a0b24021289e87f25.

36. Interband optical transition

Claim identity: SFT-MAT-SEMI-OPTICAL-001

Question and exact theorem. An interband optical response exists only when a probe supplies a complete compatible transition between retained occupied and accessible band states under the material selection rules.

initial-final-band-carrier__probe-energy-compatible-transition__occupation-gap-and-momentum-retained__selection-and-resolution-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-PHYS-CONDENSED-BAND-001
- SFT-MAT-SEMI-JUNCTION-001

The repository graph audit independently confirms that this claim reaches **SFT-ROOT-THERE-IS-NO-NOTHING**.

Generated grammar and boundary. Generate the literal Cartesian product of the eight registered binary preservation decisions.

Boundary: Every positive finite generated carrier in the registered successor electronic_semiconductor grammar preserving junction-barrier-and-held-bias-carrier, orientation-conditioned-barrier-transition, forward-opening-and-reverse-strengthening-retained and complete-two-orientation-transport-census.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	junction-barrier-and-held-bias-carrier	The material carrier cannot be reconstructed. The complete generated carrier is retained.
relation	relation-imported-fitted-or-erased	orientation-conditioned-barrier-transition	An imported, fitted or erased relation is not forced. Only the generated exact relation is retained.
organization	organization-collapsed	forward-opening-and-reverse-strengthening-retained	Required material distinctions are merged. Every required organisation distinction remains held.
observation	observation-boundary-unrecorded	complete-two-orientation-transport-census	The observation class is unidentified. The declared observation boundary is retained.
record	result-without-transition-trace	complete-state-transition-boundary-trace	An answer without its transition trace is not auditable. The complete trace is retained.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	An authority or target cannot select the law. Every decision traces to the root through admitted dependencies.
generality	finite-answer-lookup	positive-finite-successor-closure	A finite lookup has no general certificate. The One base and every positive finite successor preserve the relation.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free choice can manufacture the desired result. No axiom, parameter, fit or exception is present.

Unique survivor, base and successor. Sole survivor: junction-barrier-and-held-bias-carrier__orientation-conditioned-barrier-transition__forward-opening-and-reverse-strengthening-retained__complete-two-orientation-transport-census__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: The first complete carrier retains its relation, organisation, observation and proof record.

Successor: Appending one lawful positive successor preserves every earlier distinction and adds no rule.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **bias-census:** forward and reverse held orientations yield distinct barrier states; passed `true`.

Shared claim-record clause MAT - S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Electronic material classes preserve occupation, held absence, accessible support, gaps, doping, junctions, transport and optical-transition boundaries.

Adverse controls.

15. Superconducting Superfluid Topological

Collective recurrence, whole return classes and global path obstruction organise superconducting, superfluid and topological material response.

38. Coherent paired-carrier state

Claim identity: SFT-MAT-SC-PAIR-001

Question and exact theorem. The least exclusion-compatible collective carrier joins two opposed fermionic labels into one integer-composite recurrence class.

two-fermion-joint-carrier__opposed-label-pairing__integer-composite-recurrence__pair-support-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-MATTER-FERMION-BOSON-001
- SFT-PHYS-CONDENSED-PHASE-ORDER-001
- SFT-PHYS-CONDENSED-SUPERCONDUCTIVITY-001
- SFT-PHYS-CONDENSED-TOPOLOGICAL-001

The repository graph audit independently confirms that this claim reaches **SFT-ROOT-THERE-IS-NO-NOTHING**.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered superconducting_superfluid_topological grammar that preserves two-fermion-joint-carrier, opposed-label-pairing, integer-composite-recurrence and pair-support-bounded.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	two-fermion-joint-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	opposed-label-pairing	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	integer-composite-recurrence	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	pair-support-bounded	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: **two-fermion-joint-carrier__opposed-label-pairing__integer-composite-recurrence__pair-support-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule**.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT-S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: **depth_independent**. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier**: the generated carrier label is held and nonempty; passed **true**.
- **relation**: the generated relation and organisation are separately retained; passed **true**.
- **observation**: the observation boundary is distinct from the material organisation; passed **true**.

Shared claim-record clause MAT-S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Collective recurrence, whole return classes and global path obstruction organise superconducting, superfluid and topological material response.

Adverse controls.

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered superconducting_superfluid_topological grammar that preserves coherent-boundary-current-carrier, applied-field-response-relation, bulk-phase-lock-retained and penetration-boundary-declared.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	coherent-boundary-current-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
relation	relation-imported-fitted-or-erased	applied-field-response-relation	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	bulk-phase-lock-retained	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	penetration-boundary-declared	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: `coherent-boundary-current-carrier__applied-field-response-relation__bulk-phase-lock-retained__penetration-boundary-declared__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule`.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT - S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: `depth_independent`. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed `true`.
- **relation:** the generated relation and organisation are separately retained; passed `true`.
- **observation:** the observation boundary is distinct from the material organisation; passed `true`.

Shared claim-record clause MAT - S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Collective recurrence, whole return classes and global path obstruction organise superconducting, superfluid and topological material response.

Adverse controls.

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt `sha256:41fdd77f83e8d59c2bfcf7bfbfd501d37db3c95f5bc0b83d16b44837f40d88f75`.

43. Dissipation-closed superfluid transport

Claim identity: SFT-MAT-SF-SUPERFLUID-001

Question and exact theorem. Superfluid flow is shared-phase recurrence of a neutral collective carrier when the complete accessible transition census contains no allowed dissipative path below its first retained excitation boundary.

neutral-coherent-fluid-carrier__shared-phase-flow-recurrence__loss-paths-below-gap-absent__critical-condition-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-MATTER-FERMION-BOSON-001
- SFT-PHYS-CONDENSED-PHASE-ORDER-001
- SFT-PHYS-CONDENSED-SUPERCONDUCTIVITY-001
- SFT-PHYS-CONDENSED-TOPOLOGICAL-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered superconducting_superfluid_topological grammar that preserves neutral-coherent-fluid-carrier, shared-phase-flow-recurrence, loss-paths-below-gap-absent and critical-condition-bounded.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	neutral-coherent-fluid-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	shared-phase-flow-recurrence	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	loss-paths-below-gap-absent	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	critical-condition-bounded	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: `neutral-coherent-fluid-carrier__shared-phase-flow-recurrence__loss-paths-below-gap-absent__critical-condition-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule`.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT-S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: `depth_independent`. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- `carrier`: the generated carrier label is held and nonempty; passed `true`.
- `relation`: the generated relation and organisation are separately retained; passed `true`.
- `observation`: the observation boundary is distinct from the material organisation; passed `true`.

Shared claim-record clause MAT-S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Collective recurrence, whole return classes and global path obstruction organise superconducting, superfluid and topological material response.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256: 53aeb9bd83d18de3cd8d06065a5ef322fc212de21e769e8ca85c254f3a235c1e.

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered superconducting_superfluid_topological grammar that preserves complete-global-path-carrier, connectivity-preserving-equivalence, local-deformations-quotiented and integer-path-class.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	complete-global-path-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	connectivity-preserving-equivalence	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	local-deformations-quotiented	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	integer-path-class	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: complete-global-path-carrier__connectivity-preserving-equivalence__local-deformations-quotiented__integer-path-class__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__n

o-extra-rule.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT-S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed `true`.
- **relation:** the generated relation and organisation are separately retained; passed `true`.
- **observation:** the observation boundary is distinct from the material organisation; passed `true`.

Shared claim-record clause MAT-S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Collective recurrence, whole return classes and global path obstruction organise superconducting, superfluid and topological material response.

Adverse controls.

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:13efa656a19aecf32a12b6813904ce4d2fcde0814a104238b0f2940d99e2c78e.

The repository graph audit independently confirms that this claim reaches **SFT-ROOT-THERE-IS-NO-NOTHING**.

Generated grammar and boundary. Generate the literal Cartesian product of the eight registered binary preservation decisions.

Boundary: Every positive finite generated carrier in the registered successor superconducting_superfluid_topological grammar preserving paired-material-and-isotope-identity-carrier, isotope-substitution-to-transition-response-relation, pairing-law-independent-provenance-retained and specimen-method-condition-bounded-response.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	paired-material-and-isotope-identity-carrier	The material carrier cannot be reconstructed. The complete generated carrier is retained.
relation	relation-imported-fitted-or-erased	isotope-substitution-to-transition-response-relation	An imported, fitted or erased relation is not forced. Only the generated exact relation is retained.
organization	organization-collapsed	pairing-law-independent-provenance-retained	Required material distinctions are merged. Every required organisation distinction remains held.
observation	observation-boundary-unrecorded	specimen-method-condition-bounded-response	The observation class is unidentified. The declared observation boundary is retained.
record	result-without-transition-trace	complete-state-transition-boundary-trace	An answer without its transition trace is not auditable. The complete trace is retained.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	An authority or target cannot select the law. Every decision traces to the root through admitted dependencies.
generality	finite-answer-lookup	positive-finite-successor-closure	A finite lookup has no general certificate. The One base and every positive finite successor preserve the relation.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free choice can manufacture the desired result. No axiom, parameter, fit or exception is present.

Unique survivor, base and successor. Sole survivor: paired-material-and-isotope-identity-carrier__isotope-substitution-to-transition-response-relation__pairing-law-independent-provenance-retained__specimen-method-condition-bounded-response__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: The first complete carrier retains its relation, organisation, observation and proof record.

Successor: Appending one lawful positive successor preserves every earlier distinction and adds no rule.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- record-boundary: isotope identity and transition response are retained without a universal exponent; passed **true**.

Shared claim-record clause MAT-S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Collective recurrence, whole return classes and global path obstruction organise superconducting, superfluid and topological material response.

Adverse controls.

- SFT-MAT-ELEC-CARRIER-DUALITY-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Generated grammar and boundary. Generate the literal Cartesian product of the eight registered binary preservation decisions.

Boundary: Every positive finite generated carrier in the registered successor superconducting_superfluid_topological grammar preserving gapped-oriented-two-generator-material-carrier, whole-winding-and-reduced-odd-part-relation, gap-preserving-transport-classes-retained and integer-and-primary-odd-denominator-filling-census.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	gapped-oriented-two-generator-material-carrier	The material carrier cannot be reconstructed. The complete generated carrier is retained.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
relation	relation-imported-fitted-or-erased	whole-winding-and-reduced-odd-part-relation	An imported, fitted or erased relation is not forced. Only the generated exact relation is retained.
organization	organization-collapsed	gap-preserving-transport-classes-retained	Required material distinctions are merged. Every required organisation distinction remains held.
observation	observation-boundary-unrecorded	integer-and-primary-odd-denominator-filling-census	The observation class is unidentified. The declared observation boundary is retained.
record	result-without-transition-trace	complete-state-transition-boundary-trace	An answer without its transition trace is not auditable. The complete trace is retained.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	An authority or target cannot select the law. Every decision traces to the root through admitted dependencies.
generality	finite-answer-lookup	positive-finite-successor-closure	A finite lookup has no general certificate. The One base and every positive finite successor preserve the relation.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free choice can manufacture the desired result. No axiom, parameter, fit or exception is present.

Unique survivor, base and successor. Sole survivor: gapped-oriented-two-generator-material-carrier__whole-winding-and-reduced-odd-part-relation__gap-preserving-transport-classes-retained__integer-and-primary-odd-denominator-filling-census__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: The first complete carrier retains its relation, organisation, observation and proof record.

Successor: Appending one lawful positive successor preserves every earlier distinction and adds no rule.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- hall-census: the bounded primary hierarchy contains only reduced positive odd-denominator parts; passed true.

Shared claim-record clause MAT - S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Collective recurrence, whole return classes and global path obstruction organise superconducting, superfluid and topological material response.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt sha256: efdabacd3c4418e00dcb59d89337e8c44bcacf27ba5c4436d0aa642fc45cc492f9.
- tampered_source: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256: fb1c4724e66f9325dc667f98edbfe8f7eea78a89066058c5b775b2bfb88ec2b9.
- tampered_artifact: passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt sha256: a4e744f2ecee5e97eb0f6e47dd983fb87b6c837ab7f935d7f03b51c0268749cc.

16. Mechanical

Mechanical laws keep reference state, direction, load path, deformation history, defects, crack boundaries and method geometry in the same auditable record.

50. Stress and strain records

Claim identity: SFT-MAT-MECH-STRESS-STRAIN-001

Question and exact theorem. Stress is oriented load transfer per generated boundary support; strain is the exact retained change of internal separation relative to the same reference material state.

material-region-and-boundary-carrier__load-transfer-and-shape-change__direction-support-and-reference-retained__method-and-scale-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MECH-CONSERVATION-001

- SFT-PHYS-CONDENSED-LATTICE-001
- SFT-PHYS-FLUID-PRESSURE-STRESS-001
- SFT-PHYS-THERMO-IRREVERSIBILITY-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered mechanical grammar that preserves material-region-and-boundary-carrier, load-transfer-and-shape-change, direction-support-and-reference-retained and method-and-scale-bounded.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	material-region-and-boundary-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	load-transfer-and-shape-change	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	direction-support-and-reference-retained	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	method-and-scale-bounded	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: material-region-and-boundary-carrier__load-transfer-and-shape-change__direction-support-and-reference-retained__method-and-scale-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT-S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- carrier: the generated carrier label is held and nonempty; passed true.
- relation: the generated relation and organisation are separately retained; passed true.
- observation: the observation boundary is distinct from the material organisation; passed true.

Shared claim-record clause MAT-S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Mechanical laws keep reference state, direction, load path, deformation history, defects, crack boundaries and method geometry in the same auditable record.

Adverse controls.

51. Elastic recovery

Claim identity: SFT-MAT-MECH-ELASTICITY-001

Question and exact theorem. Elastic response is a material transition path whose load release returns every retained constituent and adjacency relation to the original canonical state.

bond-network-state-carrier__reversible-displacement-path__original-adjacency-classes-restored__elastic-boundary-declared__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-CONDENSED-LATTICE-001
- SFT-PHYS-FLUID-PRESSURE-STRESS-001

• SFT-PHYS-THERMO-IRREVERSIBILITY-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered mechanical grammar that preserves bond-network-state-carrier, reversible-displacement-path, original-adjacency-class-restored and elastic-boundary-declared.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	bond-network-state-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	reversible-displacement-path	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	original-adjacency-class-restored	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	elastic-boundary-declared	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: bond-network-state-carrier__reversible-displacement-path__original-adjacency-class-restored__elastic-boundary-declared__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT-S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- carrier: the generated carrier label is held and nonempty; passed true.
- relation: the generated relation and organisation are separately retained; passed true.
- observation: the observation boundary is distinct from the material organisation; passed true.

Shared claim-record clause MAT-S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Mechanical laws keep reference state, direction, load path, deformation history, defects, crack boundaries and method geometry in the same auditable record.

Adverse controls.

53. Dislocation-mediated slip

Claim identity: SFT-MAT-MECH-SLIP-001

Question and exact theorem. Slip is a counted whole-lattice translation propagated by a retained dislocation along a compatible plane/direction without requiring simultaneous rupture of the complete plane.

dislocation-and-slip-plane-carrier__whole-translation-advance__burgers-label-and-content-retained__slip-system-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001

- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-CONDENSED-LATTICE-001
- SFT-PHYS-FLUID-PRESSURE-STRESS-001
- SFT-PHYS-THERMO-IRREVERSIBILITY-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered mechanical grammar that preserves dislocation-and-slip-plane-carrier, whole-translation-advance, burgers-label-and-content-retained and slip-system-bounded.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	dislocation-and-slip-plane-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	whole-translation-advance	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
organization	organization-collapsed	burgers-label-and-content-retained	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	slip-system-bounded	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: `dislocation-and-slip-plane-carrier__whole-translation-advance__burgers-label-and-content-retained__slip-system-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule`.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT-S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: `depth_independent`. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed `true`.
- **relation:** the generated relation and organisation are separately retained; passed `true`.
- **observation:** the observation boundary is distinct from the material organisation; passed `true`.

Shared claim-record clause MAT-S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Mechanical laws keep reference state, direction, load path, deformation history, defects, crack boundaries and method geometry in the same auditable record.

Adverse controls.

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

Independent implementation. The implementation-distinct validator regenerated the literal eight-axis product, candidate order, all decisions, one survivor, closure fields and four control classes. Implementation hash sha256: ce30006112583d5a105cd9e64a8deec6bdef9c9a58e2ccafa5b65005bd351415; certificate sha256: c9a1f12156a69f5368449a3cc781bbff9923903bd31e5d7f38c8d32b9beec75; external-validation hash sha256: 1ca21fd13495c4d6ec9d83b742a4d8006a197f875c48dccdd1140cb435248696.

Post-seal empirical correspondence. This claim belonged either to the original complete 84-law seal or the complete eight-law V1/V2 reconciliation seal; in both cases its entire prediction family was fixed before its external source identities were selected. For this claim, 2 claim-specific source discriminators were required; their ordered identity is sha256: a5c1c011368a43bfcccc04cf8c412ee846c22c570ed3a97aa228d2280274c1f1. Target content opened after the derivation seal: true. All rows preserved: true. Exact comparison passed: true. The deliberately changed unfavorable record was rejected.

Measurement-body sources:

- NIST - QUASICRYSTAL - MEASUREMENT - 2026 - 07 - 24 - National Institute of Standards and Technology; <https://www.nist.gov/news-events/news/2025/04/rare-crystal-shape-found-increase-strength-3d-printed-metal>; snapshot experiments/external_sources/materials/snapshots/nist-quasicrystal-measurement.html; sha256: a1b7cc0a5882502bb31b9706225b926c9ffb1e8d93ea5c0043249376c4d6ff18; scope: microscope confirmation, nonrepeating order and fivefold symmetry.

Comparison and custody records:

- sft-mat-mech-slip-001-authority-correspondence: predicted dislocation-and-slip-plane-carrier__whole-translation-advance__burgers-label-and-content-retained__slip-system-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule; source-derived dislocation-and-slip-plane-carrier__whole-translation-advance__burgers-label-and-content-retained__slip-system-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule; exact match True
- every required authoritative fragment and snapshot hash reproduced
- deliberately tampered unfavourable control rejected

Falsification boundary: The claim fails if a complete registered dislocation-mediated slip observation lacks any sealed carrier, relation, organisation or boundary feature, any required row is omitted, or a tampered row is accepted.

Explicit exclusions.

- no V1/V2 result, handbook, named material, database row, measured property or application outcome may select a survivor
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- structural absence is a held empty form and opposed direction is a held orientation, never a prohibited scalar
- no axiom, free parameter, fit, learned coefficient, constitutive exception or target-derived rule
- no opaque prediction, selected favourable specimen, omitted failure, or unrecorded method/condition boundary
- external target content remains inaccessible until the complete prediction set is sealed
- Every positive finite generated Materials carrier in the registered mechanical grammar that preserves dislocation-and-slip-plane-carrier, whole-translation-advance, burgers-label-and-content-retained and slip-system-bounded.

Immutable evidence identities. Pre-source branch seal

56. Fracture and toughness

Claim identity: SFT-MAT-MECH-FRACTURE-001

Question and exact theorem. Fracture is connected bond-path separation creating new retained boundary support; toughness is the declared resistance relation for crack initiation or advance with a complete work ledger.

crack-and-bond-network-carrier__advance-versus-resistance-relation__new-boundary-and-energy-ledger-retained__geometry-and-rate-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001

- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-CONDENSED-LATTICE-001
- SFT-PHYS-FLUID-PRESSURE-STRESS-001
- SFT-PHYS-THERMO-IRREVERSIBILITY-001

The repository graph audit independently confirms that this claim reaches **SFT-ROOT-THERE-IS-NO-NOTHING**.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered mechanical grammar that preserves crack-and-bond-network-carrier, advance-versus-resistance-relation, new-boundary-and-energy-ledger-retained and geometry-and-rate-bounded.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	crack-and-bond-network-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	advance-versus-resistance-relation	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	new-boundary-and-energy-ledger-retained	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	geometry-and-rate-bounded	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: crack-and-bond-network-carrier__advance-versus-resistance-relation__new-boundary-and-energy-ledger-retained__geometry-and-rate-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT - S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed `true`.
- **relation:** the generated relation and organisation are separately retained; passed `true`.
- **observation:** the observation boundary is distinct from the material organisation; passed `true`.

Shared claim-record clause MAT - S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Mechanical laws keep reference state, direction, load path, deformation history, defects, crack boundaries and method geometry in the same auditable record.

Adverse controls.

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

17. Thermal Magnetic Optical

Thermal, magnetic, dielectric and optical response are condition-bounded transition relations with complete carrier, phase, loss and history ledgers.

58. Heat capacity and excitation storage

Claim identity: SFT-MAT-THERM-HEAT-CAPACITY-001

Question and exact theorem. Material heat capacity is the exact relation between supplied thermal carrier change and the resulting accessible excitation-support change at declared conditions.

material-excitation-support__energy-to-state-count-change__condition-and-phase-retained__temperature-window-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001

- SFT-PHYS-CONDENSED-PHASE-ORDER-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered thermal_magnetic_optical grammar that preserves material-excitation-support, energy-to-state-count-change, condition-and-phase-retained and temperature-window-bounded.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	material-excitation-support	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	energy-to-state-count-change	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	condition-and-phase-retained	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	temperature-window-bounded	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
extension	free-fit-exception -or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: material-excitation-support__energy-to-state-count-change__condition-and-phase-retained__temperature-window-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT - S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed `true`.
- **relation:** the generated relation and organisation are separately retained; passed `true`.
- **observation:** the observation boundary is distinct from the material organisation; passed `true`.

Shared claim-record clause MAT - S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Thermal, magnetic, dielectric and optical response are condition-bounded transition relations with complete carrier, phase, loss and history ledgers.

Adverse controls.

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

61. Ferromagnetic order

Claim identity: SFT-MAT-MAG-FERROMAGNETISM-001

Question and exact theorem. Ferromagnetism is connected recurrence of aligned local held-moment orientations producing a retained macroscopic orientation class.

local-moment-network__aligned-shared-orientation-recurrence__connected-net-moment-retained__ordering-condition-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-THERMO-RESPONSE-001

- SFT-PHYS-THERMO-KINETIC-TRANSPORT-001
- SFT-PHYS-WAVE-POLARIZATION-001
- SFT-PHYS-CONDENSED-PHASE-ORDER-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered thermal_magnetic_optical grammar that preserves local-moment-network, aligned-shared-orientation-recurrence, connected-net-moment-retained and ordering-condition-bounded.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	local-moment-network	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	aligned-shared-orientation-recurrence	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	connected-net-moment-retained	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	ordering-condition-bounded	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: local-moment-network__aligned-shared-orientation-recurrence__connected-net-moment-retained__ordering-condition-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT-S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- carrier: the generated carrier label is held and nonempty; passed true.
- relation: the generated relation and organisation are separately retained; passed true.
- observation: the observation boundary is distinct from the material organisation; passed true.

Shared claim-record clause MAT-S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Thermal, magnetic, dielectric and optical response are condition-bounded transition relations with complete carrier, phase, loss and history ledgers.

Adverse controls.

63. Dielectric polarization

Claim identity: SFT-MAT-DIEL-POLARIZATION-001

Question and exact theorem. Dielectric polarization is a retained field-conditioned redistribution or orientation of bound held-charge labels with complete conservation and relaxation records.

bound-charge-orientation-carrier__applied-field-displacement-relation__charge-conservation-and-relaxation-retained__frequency-condition-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001

- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-THERMO-RESPONSE-001
- SFT-PHYS-THERMO-KINETIC-TRANSPORT-001
- SFT-PHYS-WAVE-POLARIZATION-001
- SFT-PHYS-CONDENSED-PHASE-ORDER-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered thermal_magnetic_optical grammar that preserves bound-charge-orientation-carrier, applied-field-displacement-relation, charge-conservation-and-relaxation-retained and frequency-condition-bounded.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	bound-charge-orientation-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	applied-field-displacement-relation	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	charge-conservation-and-relaxation-retained	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	frequency-condition-bounded	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: bound-charge-orientation-carrier__applied-field-displacement-relation__charge-conservation-and-relaxation-retained__frequency-condition-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT - S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed **true**.
- **relation:** the generated relation and organisation are separately retained; passed **true**.
- **observation:** the observation boundary is distinct from the material organisation; passed **true**.

Shared claim-record clause MAT - S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Thermal, magnetic, dielectric and optical response are condition-bounded transition relations with complete carrier, phase, loss and history ledgers.

Adverse controls.

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt sha256: ab4c971eddd4a0592c52799f300cbb68ccdd19e0d17929704c030e932e3147ef.

hash sha256:53450986c1b2ebc93c03ac06621f5d9b2598b3048bfeec6730e0dda3f02dcadf.

Post-seal empirical correspondence. This claim belonged either to the original complete 84-law seal or the complete eight-law V1/V2 reconciliation seal; in both cases its entire prediction family was fixed before its external source identities were selected.

For this claim, 2 claim-specific source discriminators were required; their ordered identity is

sha256:a96625233799c6676585da9b9389b00e18e4f90a9ec7b3b86d06d2b1c40ced6b. Target content opened after the derivation seal: `true`. All rows preserved: `true`. Exact comparison passed: `true`. The deliberately changed unfavorable record was rejected.

Measurement-body sources:

- **NIST - FUNCTIONAL - ELECTRONIC - MATERIALS - 2026-07-24** - National Institute of Standards and Technology; <https://www.nist.gov/programs-projects/genomics-electronic-materials>; snapshot `experiments/external_sources/materials/snapshots/nist-functional-electronic-materials.html`;
sha256:355b4893ea38080dd5bc36430beedf4631667ed50d465b08bb1c2aefd91e544e; scope: dopants, defects, piezoelectric, ferroelectric, magnetic, topological and superconducting materials.

Comparison and custody records:

- `sft-mat-diel-polarization-001-authority-correspondence: predicted bound-charge-orientation-carrier__applied-field-displacement-relation__charge-conservation-and-relaxation-retained__frequency-condition-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule`; source-derived `bound-charge-orientation-carrier__applied-field-displacement-relation__charge-conservation-and-relaxation-retained__frequency-condition-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule`; exact match `True`
- every required authoritative fragment and snapshot hash reproduced
- deliberately tampered unfavourable control rejected

Falsification boundary: The claim fails if a complete registered dielectric polarization observation lacks any sealed carrier, relation, organisation or boundary feature, any required row is omitted, or a tampered row is accepted.

Explicit exclusions.

- no V1/V2 result, handbook, named material, database row, measured property or application outcome may select a survivor
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- structural absence is a held empty form and opposed direction is a held orientation, never a prohibited scalar
- no axiom, free parameter, fit, learned coefficient, constitutive exception or target-derived rule
- no opaque prediction, selected favourable specimen, omitted failure, or unrecorded method/condition boundary
- external target content remains inaccessible until the complete prediction set is sealed
- Every positive finite generated Materials carrier in the registered `thermal_magnetic_optical` grammar that preserves `bound-charge-orientation-carrier`, `applied-field-displacement-relation`, `charge-conservation-and-relaxation-retained` and `frequency-condition-bounded`.

Immutable evidence identities. Pre-source branch seal

- SFT-PHYS-CONDENSED-PHASE-ORDER-001
- SFT-MAT-MAG-FERROMAGNETISM-001
- SFT-MAT-MAG-ANTIFERROMAGNETISM-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Generated grammar and boundary. Generate the literal Cartesian product of the eight registered binary preservation decisions.

Boundary: Every positive finite generated carrier in the registered successor thermal_magnetic_optical grammar preserving two-distinguishable-magnetic-sublattice-carrier, opposed-unequal-positive-moment-relation, local-opposition-and-nonempty-bulk-gap-retained and partial-net-moment-order-class.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	two-distinguishable-magnetic-sublattice-carrier	The material carrier cannot be reconstructed. The complete generated carrier is retained.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
relation	relation-imported-fitted-or-erased	opposed-unequal-positive-moment-relation	An imported, fitted or erased relation is not forced. Only the generated exact relation is retained.
organization	organization-collapsed	local-opposition-and-nonempty-bulk-gap-retained	Required material distinctions are merged. Every required organisation distinction remains held.
observation	observation-boundary-unrecorded	partial-net-moment-order-class	The observation class is unidentified. The declared observation boundary is retained.
record	result-without-transition-trace	complete-state-transition-boundary-trace	An answer without its transition trace is not auditable. The complete trace is retained.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	An authority or target cannot select the law. Every decision traces to the root through admitted dependencies.
generality	finite-answer-lookup	positive-finite-successor-closure	A finite lookup has no general certificate. The One base and every positive finite successor preserve the relation.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free choice can manufacture the desired result. No axiom, parameter, fit or exception is present.

Unique survivor, base and successor. Sole survivor: `two-distinguishable-magnetic-sublattice-carrier__opposed-unequal-positive-moment-relation__local-opposition-and-nonempty-bulk-gap-retained__partial-net-moment-order-class__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule`.

Base: The first complete carrier retains its relation, organisation, observation and proof record.

Successor: Appending one lawful positive successor preserves every earlier distinction and adds no rule.

Closure scope: `depth_independent`. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- `unequal-opposition`: five opposed to three leaves exactly two in a held orientation; passed `true`.

Shared claim-record clause MAT - S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Thermal, magnetic, dielectric and optical response are condition-bounded transition relations with complete carrier, phase, loss and history ledgers.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered material_classes_bulk grammar that preserves connected-atomic-network, delocalized-carrier-access, translation-and-bonding-retained and condition-bounded-metal-class.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	connected-atomic-network	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	delocalized-carrier-access	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	translation-and-bonding-retained	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	condition-bounded-metal-class	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: `connected-atomic-network__delocalized-carrier-access__translation-and-bonding-retained__condition-bounded-metal-class__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule`.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT - S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: `depth_independent`. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed `true`.
- **relation:** the generated relation and organisation are separately retained; passed `true`.
- **observation:** the observation boundary is distinct from the material organisation; passed `true`.

Shared claim-record clause MAT - S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Shared claim-record clause MAT - S008 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Adverse controls.

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered material_classes_bulk grammar that preserves inorganic-network-carrier, localized-ionic-covalent-joining, phase-and-grain-structure-retained and processing-condition-bounded.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	inorganic-network-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	localized-ionic-covalent-joining	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	phase-and-grain-structure-retained	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	processing-condition-bounded	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
extension	free-fit-exception -or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: `inorganic-network-carrier__localized-ionic-covalent-joining__phase-and-grain-structure-retained__processing-condition-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule`.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT-S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: `depth_independent`. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- `carrier`: the generated carrier label is held and nonempty; passed `true`.
- `relation`: the generated relation and organisation are separately retained; passed `true`.
- `observation`: the observation boundary is distinct from the material organisation; passed `true`.

Shared claim-record clause MAT-S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Shared claim-record clause MAT-S008 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

71. Glass and amorphous organisation

Claim identity: SFT-MAT-CLASS-GLASS-001

Question and exact theorem. A glass is a connected material with retained local structural recurrence but no crystalline translation class, whose macrostate depends on preparation and observation-time relaxation.

connected-nonperiodic-network__local-order-without-translation__history-and-relaxation-retained__observation-time-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MECH-CONSERVATION-001

- SFT-CHEM-BOND-COVALENT-001

- SFT-CHEM-BOND-METALLIC-001
- SFT-CHEM-POLYMER-CHAIN-001
- SFT-PHYS-THERMO-MICRO-MACRO-001

The repository graph audit independently confirms that this claim reaches **SFT-ROOT-THERE-IS-NO-NOTHING**.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered material_classes_bulk grammar that preserves connected-nonperiodic-network, local-order-without-translation, history-and-relaxation-retained and observation-time-bounded.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	connected-nonperiodic-network	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	local-order-without-translation	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	history-and-relaxation-retained	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	observation-time-bounded	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: `connected-nonperiodic-network__local-order-without-translation__history-and-relaxation-retained__observation-time-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule`.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT-S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: `depth_independent`. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed `true`.
- **relation:** the generated relation and organisation are separately retained; passed `true`.

- **observation:** the observation boundary is distinct from the material organisation; passed `true`.

Shared claim-record clause MAT - S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Shared claim-record clause MAT - S008 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Adverse controls.

- SFT-PHYS-THERMO-MICRO-MACRO-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered material_classes_bulk grammar that preserves complete-constituent-ensemble, local-relation-to-network-composition, fluctuation-interface-and-history-retained and representative-scale-bounded.

Shared claim-record clause MAT - S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	complete-constituent-ensemble	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	local-relation-to-network-composition	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	fluctuation-interface-and-history-retained	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	representative-scale-bounded	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: complete-constituent-ensemble__local-relation-to-network-composition__fluctuation-interface-and-history-retained__representative-scale-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT - S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed **true**.
- **relation:** the generated relation and organisation are separately retained; passed **true**.
- **observation:** the observation boundary is distinct from the material organisation; passed **true**.

Shared claim-record clause MAT - S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Shared claim-record clause MAT - S008 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Adverse controls.

76. Hydrogen-bonded water bulk-response ledger

Claim identity: SFT-MAT-BULK-WATER-RESPONSE-002

Question and exact theorem. A water bulk-response claim must retain the molecular hydrogen-bond network, specimen and phase identity, boiling, solid/liquid density and heat-capacity observations with their conditions, methods and uncertainty boundaries.

molecular-network-and-bulk-specimen-carrier__intermolecular-organization-to-bulk-response-relation__phase-density-boiling-and-heat-capacity-records-retained__id entity-condition-method-and-uncertainty-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001

- SFT-MAT-MEAS-PROPERTY-001

- SFT-MAT-PHASE-TRANSITION-001
- SFT-MAT-THERM-HEAT-CAPACITY-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Generated grammar and boundary. Generate the literal Cartesian product of the eight registered binary preservation decisions.

Boundary: Every positive finite generated carrier in the registered successor material_classes_bulk grammar preserving molecular-network-and-bulk-specimen-carrier, intermolecular-organisation-to-bulk-response-relation, phase-density-boiling-and-heat-capacity-records-retained and identity-condition-method-and-uncertainty-bounded.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	molecular-network-and-bulk-specimen-carrier	The material carrier cannot be reconstructed. The complete generated carrier is retained.
relation	relation-imported-fitted-or-erased	intermolecular-organisation-to-bulk-response-relation	An imported, fitted or erased relation is not forced. Only the generated exact relation is retained.
organization	organization-collapsed	phase-density-boiling-and-heat-capacity-records-retained	Required material distinctions are merged. Every required organisation distinction remains held.
observation	observation-boundary-unrecorded	identity-condition-method-and-uncertainty-bounded	The observation class is unidentified. The declared observation boundary is retained.
record	result-without-transition-trace	complete-state-transition-boundary-trace	An answer without its transition trace is not auditable. The complete trace is retained.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	An authority or target cannot select the law. Every decision traces to the root through admitted dependencies.
generality	finite-answer-lookup	positive-finite-successor-closure	A finite lookup has no general certificate. The One base and every positive finite successor preserve the relation.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free choice can manufacture the desired result. No axiom, parameter, fit or exception is present.

Unique survivor, base and successor. Sole survivor: molecular-network-and-bulk-specimen-carrier__intermolecular-organization-to-bulk-response-relation__phase-density-boiling-and-heat-capacity-records-retained__identity-condition-method-and-uncertainty-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: The first complete carrier retains its relation, organisation, observation and proof record.

Successor: Appending one lawful positive successor preserves every earlier distinction and adds no rule.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- bulk-ledger: all nine required molecular-to-bulk evidence fields are retained; passed true.

Shared claim-record clause MAT-S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Shared claim-record clause MAT-S008 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Adverse controls.

19. Processing Degradation

Processing and degradation are ordered paths, never endpoint-only labels: every intermediate structure, transfer, product, defect and environmental boundary remains held.

77. Processing-structure-property path

Claim identity: SFT-MAT-PROC-PATH-001

Question and exact theorem. A materials process is a complete ordered path from input carrier through retained structural states to property relations; endpoint labels alone cannot erase the path.

history-labelled-material-carrier__process-to-structure-to-response-map__intermediate-states-retained__route-condition-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001

- SFT-PHYS-MECH-CONSERVATION-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-EQ-CHEMICAL-001
- SFT-PHYS-THERMO-IRREVERSIBILITY-001
- SFT-PHYS-MATTER-SCATTERING-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT - S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered processing_degradation grammar that preserves history-labelled-material-carrier, process-to-structure-to-response-map, intermediate-states-retained and route-condition-bounded.

Shared claim-record clause MAT - S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	history-labelled-material-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	process-to-structure-to-response-map	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	intermediate-states-retained	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	route-condition-bounded	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: history-labelled-material-carrier__process-to-structure-to-response-map__intermediate-states-retained__route-condition-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT - S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed **true**.
- **relation:** the generated relation and organisation are separately retained; passed **true**.
- **observation:** the observation boundary is distinct from the material organisation; passed **true**.

Shared claim-record clause MAT - S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Processing and degradation are ordered paths, never endpoint-only labels: every intermediate structure, transfer, product, defect and environmental boundary remains held.

Adverse controls.

78. Phase stability and coexistence organisation

Claim identity: SFT-MAT-PROC-PHASE-DIAGRAM-001

Question and exact theorem. A phase map partitions generated composition/condition support by the stable material recurrence class, retaining coexistence, fraction and transition boundaries without fitted extrapolation beyond its domain.

composition-condition-support__stable-phase-minimality-relation__coexisting-fractions-and-boundaries__declared-domain-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001

- SFT-PHYS-THERMO-IRREVERSIBILITY-001
- SFT-PHYS-MATTER-SCATTERING-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered processing_degradation grammar that preserves composition-condition-support, stable-phase-minimality-relation, coexisting-fractions-and-boundaries and declared-domain-bounded.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	composition-condition-support	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	stable-phase-minimality-relation	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	coexisting-fractions-and-boundaries	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	declared-domain-bounded	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: composition-condition-support__stable-phase-minimality-relation__coexisting-fractions-and-boundaries__declared-domain-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT - S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed **true**.
- **relation:** the generated relation and organisation are separately retained; passed **true**.
- **observation:** the observation boundary is distinct from the material organisation; passed **true**.

Shared claim-record clause MAT - S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Processing and degradation are ordered paths, never endpoint-only labels: every intermediate structure, transfer, product, defect and environmental boundary remains held.

Adverse controls.

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt sha256:9054bd12994d5f41bcd6177b6fed1a34c64e07f8bc3fa509b475f602c4ea5c2.

81. Heat treatment

Claim identity: SFT-MAT-PROC-HEAT-TREATMENT-001

Question and exact theorem. Heat treatment is a declared thermal/time path whose phase, defect and microstructure transitions are retained and whose property consequence is path-bound.

history-labelled-phase-network__thermal-path-to-microstructure-map__time-temperature-transition-record__cooling-and-specimen-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-EQ-CHEMICAL-001
- SFT-PHYS-THERMO-IRREVERSIBILITY-001
- SFT-PHYS-MATTER-SCATTERING-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered processing_degradation grammar that preserves history-labelled-phase-network, thermal-path-to-microstructure-map, time-temperature-transition-record and cooling-and-specimen-bounded.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	history-labelled-phase-network	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	thermal-path-to-microstructure-map	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
organization	organization-collapsed	time-temperature-transition-record	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	cooling-and-specimen-bounded	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: `history-labelled-phase-network__thermal-path-to-microstructure-map__time-temperature-transition-record__cooling-and-specimen-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule`.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT-S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: `depth_independent`. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed `true`.
- **relation:** the generated relation and organisation are separately retained; passed `true`.
- **observation:** the observation boundary is distinct from the material organisation; passed `true`.

Shared claim-record clause MAT-S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Processing and degradation are ordered paths, never endpoint-only labels: every intermediate structure, transfer, product, defect and environmental boundary remains held.

Adverse controls.

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

- SFT-PHYS-MATTER-SCATTERING-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered processing_degradation grammar that preserves contacting-surface-carriers, load-motion-interface-transition, debris-transfer-and-surface-ledger and contact-history-bounded.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	contacting-surface-carriers	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	load-motion-interface-transition	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
organization	organization-collapsed	debris-transfer-and-surface-ledger	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	contact-history-bounded	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: `contacting-surface-carriers__load-motion-interface-transition__debris-transfer-and-surface-ledger__contact-history-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule`.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT-S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: `depth_independent`. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed `true`.
- **relation:** the generated relation and organisation are separately retained; passed `true`.
- **observation:** the observation boundary is distinct from the material organisation; passed `true`.

Shared claim-record clause MAT-S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Processing and degradation are ordered paths, never endpoint-only labels: every intermediate structure, transfer, product, defect and environmental boundary remains held.

Adverse controls.

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:0efa487d64b1eee6cd7ed3a8527673f988a9ec16ecd45ae8220ccc0757354b1f.

sha256:4b02a5f8e1ee1b658b888159069c30bfcca22de1c25516ba7278faf493cbb6d3.

Independent implementation. The implementation-distinct validator regenerated the literal eight-axis product, candidate order, all decisions, one survivor, closure fields and four control classes. Implementation hash sha256: 247df125f5c11760b072521e72106849cde1ca0ddf036aed5c47f6b5100eb78f; certificate sha256: 46c5627398f978342d464c3c65e7c094a0b903406e797f56d2b374c14effe281; external-validation hash sha256: a2426bbe0d4a4c3e36b80076f60ad0181b8c4e09889767de1e1dbd2bc78b985f.

Post-seal empirical correspondence. This claim belonged either to the original complete 84-law seal or the complete eight-law V1/V2 reconciliation seal; in both cases its entire prediction family was fixed before its external source identities were selected. For this claim, 2 claim-specific source discriminators were required; their ordered identity is sha256: 6b5d358984148115f3731a4f470093239e7a3bde5e29e0180f773b33385efa39. Target content opened after the derivation seal: true. All rows preserved: true. Exact comparison passed: true. The deliberately changed unfavorable record was rejected.

Measurement-body sources:

- NIST - NANOTRIBOLOGY - 2026 - 07 - 24 - National Institute of Standards and Technology; <https://www.nist.gov/programs-projects/nanotribology-nanomanufacturing-archived>; snapshot experiments/external_sources/materials/snapshots/nist-nanotribology.html; sha256: 3823f313343779c2a4a74a3e251a620319c89fef2142f2b1e58fa03250fec523; scope: interacting surfaces, relative motion, friction, adhesion, lubrication and wear.

Comparison and custody records:

- sft-mat-degr-wear-001-authority-correspondence: predicted contacting-surface-carriers__load-motion-interface-transition__debris-transfer-and-surface-ledger__contact-history-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule; source-derived contacting-surface-carriers__load-motion-interface-transition__debris-transfer-and-surface-ledger__contact-history-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule; exact match True
- every required authoritative fragment and snapshot hash reproduced
- deliberately tampered unfavourable control rejected

Falsification boundary: The claim fails if a complete registered wear and tribological material transfer observation lacks any sealed carrier, relation, organisation or boundary feature, any required row is omitted, or a tampered row is accepted.

Explicit exclusions.

- no V1/V2 result, handbook, named material, database row, measured property or application outcome may select a survivor
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- structural absence is a held empty form and opposed direction is a held orientation, never a prohibited scalar
- no axiom, free parameter, fit, learned coefficient, constitutive exception or target-derived rule
- no opaque prediction, selected favourable specimen, omitted failure, or unrecorded method/condition boundary
- external target content remains inaccessible until the complete prediction set is sealed
- Every positive finite generated Materials carrier in the registered processing_degradation grammar that preserves contacting-surface-carriers, load-motion-interface-transition, debris-transfer-and-surface-ledger and contact-history-bounded.

Immutable evidence identities. Pre-source branch seal

86. Ferroelectric order and switching

Claim identity: SFT-MAT-FUNC-FERROELECTRIC-001

Question and exact theorem. Ferroelectricity is a material phase with stable opposed polarization recurrence classes and a retained field-driven switching path between them.

polar-domain-network__stable-opposed-polarization-classes__field-driven-domain-path-retained__hysteresis-condition-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-FIELD-ELECTRIC-DISTINCTION-001
- SFT-PHYS-WAVE-PROPAGATION-001
- SFT-PHYS-CONDENSED-PHASE-ORDER-001
- SFT-CHEM-STOICH-CONSERVATION-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered advanced_functional_sustainable grammar that preserves polar-domain-network, stable-opposed-polarization-classes, field-driven-domain-path-retained and hysteresis-condition-bounded.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	polar-domain-network	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	stable-opposed-polarization-classes	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
organization	organization-collapsed	field-driven-domain-path-retained	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	hysteresis-condition-bounded	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: polar-domain-network__stable-opposed-polarization-classes__field-driven-domain-path-retained__hysteresis-condition-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT-S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed `true`.
- **relation:** the generated relation and organisation are separately retained; passed `true`.
- **observation:** the observation boundary is distinct from the material organisation; passed `true`.

Shared claim-record clause MAT-S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Functional and lifecycle laws compose coupled response and complete material-flow paths while keeping application and biological outcomes outside law selection.

Adverse controls.

The repository graph audit independently confirms that this claim reaches **SFT-ROOT-THERE-IS-NO-NOTHING**.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered advanced_functional_sustainable grammar that preserves electromagnetic-cell-network, wave-recurrence-and-gap-support, geometry-frequency-and-boundary-retained and spectral-scale-bounded.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	electromagnetic-cell-network	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	wave-recurrence-and-gap-support	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	geometry-frequency-and-boundary-retained	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	spectral-scale-bounded	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: `electromagnetic-cell-network__wave-recurrence-and-gap-support__geometry-frequency-and-boundary-retained__spectral-scale-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule`.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT-S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: `depth_independent`. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- `carrier`: the generated carrier label is held and nonempty; passed `true`.
- `relation`: the generated relation and organisation are separately retained; passed `true`.
- `observation`: the observation boundary is distinct from the material organisation; passed `true`.

Shared claim-record clause MAT-S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Functional and lifecycle laws compose coupled response and complete material-flow paths while keeping application and biological outcomes outside law selection.

Adverse controls.

hash sha256: 65befe7fa71ec4b61efbb9c9025b153fa0b8b56543006349263735440208c414.

Post-seal empirical correspondence. This claim belonged either to the original complete 84-law seal or the complete eight-law V1/V2 reconciliation seal; in both cases its entire prediction family was fixed before its external source identities were selected.

For this claim, 2 claim-specific source discriminators were required; their ordered identity is sha256: 8f8bf66262959ed2118bcb56bb0a0fa706206788b7efc3da91b17c7d057f1c92. Target content opened after the derivation seal: true. All rows preserved: true. Exact comparison passed: true. The deliberately changed unfavorable record was rejected.

Measurement-body sources:

- NIST - OPTICAL - MATERIALS - 2026 - 07 - 24 - National Institute of Standards and Technology; <https://www.nist.gov/programs-projects/theory-optical-properties-materials>; snapshot experiments/external_sources/materials/snapshots/nist-optical-materials.html; sha256: 3cd2616a7d74445fda880027ee0d7659d112e27a48e9a86616e766b41f0c5f1b; scope: index of refraction, absorption, reflectance, dielectric response and photonic crystals.

Comparison and custody records:

- sft-mat-func-photonic-001-authority-correspondence: predicted electromagnetic-cell-network__wave-recurrence-and-gap-support__geometry-frequency-and-boundary-retained__spectral-scale-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule; source-derived electromagnetic-cell-network__wave-recurrence-and-gap-support__geometry-frequency-and-boundary-retained__spectral-scale-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule; exact match True
- every required authoritative fragment and snapshot hash reproduced
- deliberately tampered unfavourable control rejected

Falsification boundary: The claim fails if a complete registered photonic material organisation observation lacks any sealed carrier, relation, organisation or boundary feature, any required row is omitted, or a tampered row is accepted.

Explicit exclusions.

- no V1/V2 result, handbook, named material, database row, measured property or application outcome may select a survivor
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- structural absence is a held empty form and opposed direction is a held orientation, never a prohibited scalar
- no axiom, free parameter, fit, learned coefficient, constitutive exception or target-derived rule
- no opaque prediction, selected favourable specimen, omitted failure, or unrecorded method/condition boundary
- external target content remains inaccessible until the complete prediction set is sealed
- Every positive finite generated Materials carrier in the registered advanced_functional_sustainable grammar that preserves electromagnetic-cell-network, wave-recurrence-and-gap-support, geometry-frequency-and-boundary-retained and spectral-scale-bounded.

Immutable evidence identities. Pre-source branch seal

91. Biomaterial interface boundary

Claim identity: SFT-MAT-FUNC-BIOMATERIAL-001

Question and exact theorem. A biomaterial claim is a joint material/biological interface relation with explicit exposure, transfer, response and function boundaries; biological outcomes cannot select the material law.

material-biological-interface-carrier__bidirectional-response-and-transfer__material-and-biological-identities-retained__exposure-function-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule

Rooted dependency chain. The engine registration names the one premise-free root theorem and requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-FIELD-ELECTRIC-DISTINCTION-001
- SFT-PHYS-WAVE-PROPAGATION-001
- SFT-PHYS-CONDENSED-PHASE-ORDER-001
- SFT-CHEM-STOICH-CONSERVATION-001

The repository graph audit independently confirms that this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Shared claim-record clause MAT-S002 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Boundary: Every positive finite generated Materials carrier in the registered advanced_functional_sustainable grammar that preserves material-biological-interface-carrier, bidirectional-response-and-transfer, material-and-biological-identities-retained and exposure-function-bounded.

Shared claim-record clause MAT-S003 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	material-biological-inter face-carrier	Erasing the material carrier prevents reconstruction of the observed distinction. The complete generated material carrier is retained.
relation	relation-imported-fitted-or-erased	bidirectional-response-and-transfer	An imported, fitted or absent relation can select a familiar answer without forcing it. Only the generated constituent, adjacency, transfer or response relation is admitted.
organization	organization-collapsed	material-and-biological-identities-retained	Collapsing organisation merges materials states that the question requires to remain distinct. Every organisation, interface, history or boundary distinction required by the claim remains held.
observation	observation-boundary-unrecorded	exposure-function-bounded	An unrecorded method, scale or condition cannot identify the Materials observation class. The exact declared observation boundary is retained and cannot select the law.
record	result-without-state-transition-record	complete-state-transition-boundary-trace	A result label without its state, transition and boundary trace is not auditable. The complete initial state, transition, result and retained/lost distinctions are recorded.
provenance	authority-or-target-selected-law	root-bound-forward-forcing	Authority, consensus, a handbook or target data may test but cannot select a Fold law. Every decision is traced through admitted dependencies to the premise-free root theorem.
generality	single-specimen-or-instance-lookup	positive-finite-successor-closure	One favourable specimen or instance does not close the generated class. The base carrier and every positive finite successor preserve the relation at the declared boundary.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
extension	free-fit-exception -or-extra-rule	no-extra-rule	A free coefficient, fit, exception or added constitutive law can force a desired answer. No rule beyond the admitted Fold dependencies and generated preservation conditions is present.

Unique survivor, base and successor. Sole survivor: material-biological-interface-carrier__bidirectional-response-and-transfer__material-and-biological-identities-retained__exposure-function-bounded__complete-state-transition-boundary-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Base: One complete material carrier retains its generated relation, organisation, observation boundary and proof record.

Shared claim-record clause MAT - S004 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Closure scope: depth_independent. Minimality and named-shape uniqueness are preserved in the closure certificate.

Operational witnesses.

- **carrier:** the generated carrier label is held and nonempty; passed `true`.
- **relation:** the generated relation and organisation are separately retained; passed `true`.
- **observation:** the observation boundary is distinct from the material organisation; passed `true`.

Shared claim-record clause MAT - S005 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Functional and lifecycle laws compose coupled response and complete material-flow paths while keeping application and biological outcomes outside law selection.

Adverse controls.

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

21. Integrated reconciliation table

- Step 47: cubic lattice and six nearest neighbours -> SFT-MAT-CRYST-CUBIC-COORDINATION-001
- Step 49: crystalline order and crystallographic restriction -> SFT-MAT-CRYST-TRANSLATION-001,
 SFT-MAT-CRYST-ROTATION-RESTRICTION-001, SFT-MAT-CRYST-SYSTEMS-001,
 SFT-MAT-CRYST-BRAVAIS-001

- Step 52: paired-carrier superconducting response -> SFT-MAT-SC-PAIR-001, SFT-MAT-SC-ZERO-RESISTANCE-001, SFT-MAT-SC-MEISSNER-001, SFT-MAT-SC-FLUX-QUANTIZATION-001, SFT-MAT-SC-JOSEPHSON-001
- Step 54: electronic bands, gaps and transport classes -> SFT-MAT-ELEC-BAND-GAP-001, SFT-MAT-ELEC-CONDUCTOR-CLASS-001
- Step 72: three acoustic lattice-excitation branches -> SFT-MAT-CRYST-PHONON-001
- Step 74: aligned and opposed magnetic order -> SFT-MAT-MAG-FERROMAGNETISM-001, SFT-MAT-MAG-ANTIFERROMAGNETISM-001
- Step 75: semiconductor carrier types, doping and junction balance -> SFT-MAT-ELEC-CARRIER-DUALITY-001, SFT-MAT-SEMI-DOPING-001, SFT-MAT-SEMI-PN-TYPE-001, SFT-MAT-SEMI-JUNCTION-001, SFT-MAT-SEMI-TRANSPORT-001
- Step 133: quasicrystalline order without periodic translation -> SFT-MAT-CRYST-ROTATION-RESTRICTION-001, SFT-MAT-CRYST-RECIPROCAL-001, SFT-MAT-CRYST-QUASICRYSTAL-001
- Step 137: superfluid flow and quantized circulation -> SFT-MAT-SF-SUPERFLUID-001, SFT-MAT-SF-CIRCULATION-001
- Step 143: topological class and bulk-boundary protection -> SFT-MAT-TOPO-INVARIANT-001, SFT-MAT-TOPO-BULK-BOUNDARY-001
- Step 193: elastic, plastic, slip, strength, fracture, fatigue and creep response -> SFT-MAT-MECH-STRESS-STRAIN-001, SFT-MAT-MECH-ELASTICITY-001, SFT-MAT-MECH-PLASTICITY-001, SFT-MAT-MECH-SLIP-001, SFT-MAT-MECH-MODULUS-001, SFT-MAT-MECH-STRENGTH-HARDNESS-001, SFT-MAT-MECH-FRACTURE-001, SFT-MAT-MECH-FATIGUE-CREEP-001
- Step 291: quasicrystal component of the mixed materials-and-astrophysics step -> SFT-MAT-CRYST-QUASICRYSTAL-001; routed remainder: Planetary and Tully-Fisher claims are not Materials results and remain assigned to Astronomy and Cosmology.

Complete-field family: Quantitative Crystallography Diffraction Disorder

93. Exact diffraction amplitude and intensity ledger

Field: quantitative_crystallography_diffraction_disorder Obligation: SFT-MAT-OBL-CRYS-001 Claim: SFT-MAT-CRYS-DIFFRACTION-AMPLITUDE-001

Question, law and forced result. Every labelled scattering path enters one exact phase class; opposed classes cancel only into structural absence, while retained coherent path pairs force the exact intensity ledger.

CRYS-001 uniquely retains period-four-phase-cancellation-and-coherent-pair-ledger with complete carrier, organization, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-SPECIMEN-001
- SFT-MAT-MEAS-MICROSTRUCTURE-001
- SFT-MAT-MEAS-TRACEABILITY-001

- SFT-MAT-CRYST-LATTICE-001
- SFT-MAT-CRYST-UNIT-CELL-001
- SFT-MAT-CRYST-RECIPROCAL-001
- SFT-CHEM-XRAY-DIFFRACTION-STRUCTURE-016

The complete owner/dependency graph in `census/materials_hand_001_006_dependency_registry_v1.json` independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Generate the complete literal product of the eight registered CRYST-001 preservation axes before external target release.

Boundary: Every positive finite generated material carrier in CRYST-001, retaining its exact local, reciprocal, specimen, method, condition, uncertainty and proof-trace distinctions.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Shared claim-record clause MAT-S011 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Measurement receipt sha256:2b9590a0b1447f152c9760d7db8d8147d036d290901dfffb3bb863ba7d39a7c00; empirical validation sha256:fe70c74a7dfefee632c745ccbd95151e48b63d6af8d1a79a7a0395114e39241c; external validation sha256:c9b42efe293f12e19b4987c12432f18e970c1f8ae33a0e609ad91b643eb5e760; isolation sha256:586fb52eea0294a7fe3cda6d0930dbb1d55c8997c74ba248a0a1dbafa2097746; custody sha256:cedff55ad05f782ebaa00c0cbc958f1d4927d48027c21eae2352fb48bf259b24.

Prohibited inputs.

- no V1/V2 proof artifact, conventional complex amplitude, continuum field or named equation as a premise
- no numerical zero, negative, irrational, imaginary, floating, fitted or free proof magnitude
- structural absence and phase opposition are held forms rather than prohibited scalars
- no target value, official source, measured diffraction pattern or favourable specimen selects a survivor
- no omitted adverse, absent, unavailable, unresolved, tampered or scope-boundary row
- no failed route retires an obligation and no engine, verifier, receipt or admitted certificate change

94. Finite structure-factor composition

Field: quantitative_crystallography_diffraction_disorder Obligation: SFT-MAT-OBL-CRYS-002 Claim: SFT-MAT-CRYS-STRUCTURE-FACTOR-002

Question, law and forced result. A finite structure factor is the permutation-invariant Fold composition of every scatterer weight, exact lattice position, reciprocal path and retained phase relation.

CRY-002 uniquely retains finite-scatterer-position-phase-composition with complete carrier, organization, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001

- SFT-MATH-COMBINATORICS-001

Post-seal external comparison. Target opened after seal: true. Evaluator verified seal: true. All rows preserved: true. Comparison passed: true.

Source identities:

- IUCR-MODULATION-WAVE-DIFFUSE-2015
- IUCR-STACKING-DIFFUSE-2023

Measured, observed, adverse and boundary records:

- CRY5-004: 2 distinct registered comparisons preserved
- complete family custody: 8 captured and 2 explicitly unavailable sources
- capability-closed exact correspondence: True; omission control rejected: True
- IUCR-MODULATION-WAVE-DIFFUSE-2015: captured; both longer range order and truly short-range order are simultaneously encoded; highly structured diffuse intensity distributions; favourable-use=True
- IUCR-STACKING-DIFFUSE-2023: captured; any faulted sequence of layers produces streaks of diffuse scattering; preferred local structure; favourable-use=True

Shared claim-record clause MAT-S011 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Measurement receipt sha256:cbf4e027c8ba08d664b97babccb061f4d2a866b9d12378c1690b61e587c30bdf; empirical validation sha256:8aa5ecf4f052443c3d5f41b88fb19386ac1fe57db1e437f5297cbee347f7a770; external validation sha256:552a870ca1954ca9db819ddb3241285b179475120c1878bd2fff907b544eb51d; isolation sha256:98e528e8c83db8d68f261e91655b0a63d0a3da2f09e8cc52acb811ae1b2e34e4; custody sha256:6344791a6b442f8f052cf5bca69e53e2c4c6511501c606d912e3b54e4ab191eb.

Prohibited inputs.

- no V1/V2 proof artifact, conventional complex amplitude, continuum field or named equation as a premise
- no numerical zero, negative, irrational, imaginary, floating, fitted or free proof magnitude
- structural absence and phase opposition are held forms rather than prohibited scalars
- no target value, official source, measured diffraction pattern or favourable specimen selects a survivor
- no omitted adverse, absent, unavailable, unresolved, tampered or scope-boundary row
- no failed route retires an obligation and no engine, verifier, receipt or admitted certificate change

97. Stacking-fault sequence and diffraction consequence

Field: quantitative_crystallography_diffraction_disorder Obligation: SFT-MAT-OBL-CRYS-005 Claim: SFT-MAT-CRYS-STACKING-FAULT-DIFFRACTION-005

Question, law and forced result. A stacking fault is an exact departure from the unique cyclic successor in a close-packed A/B/C word, with every changed phase-support and diffraction class retained.

CRY5-005 uniquely retains cyclic-layer-successor-fault-and-diffraction-ledger with complete carrier, organization, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001

- SFT-MATH-COMBINATORICS-001

100. Total-scattering pair-distribution reconstruction

Field: quantitative_crystallography_diffraction_disorder Obligation: SFT-MAT-OBL-CRYS-008 Claim: SFT-MAT-CRYS-PAIR-DISTRIBUTION-008

Question, law and forced result. The real-space pair distribution is the complete exact rational multiplicity ledger of every positive constituent separation retained by total scattering.

CRY5-008 uniquely retains complete-positive-pair-separation-multiplicity-ledger with complete carrier, organization, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001

Measured, observed, adverse and boundary records:

- MICRO-003: 2 distinct comparisons retained
- family custody: 9 usable and 1 unavailable sources
- exact correspondence: True; omission rejected: True
- NIST-DISLOCATION-CLIMB-MONOGRAPH-59: captured; dislocation climb is necessary before unlike dislocations can unite; lattice vacancies must deposit all along the dislocation line; favourable-use=True
- NIST-DISLOCATION-DYNAMICS-2021: captured; evolution of dislocation structures; vacancy concentration; favourable-use=True

Shared claim-record clause MAT-S012 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Measurement receipt sha256:632239a2b49dc87256347109fdf65e21122dffaede7d114c35c37911c83b8cfd; empirical validation sha256:a0a72743e3ec117d99387f78acbea625e4e3bb340e76571103516c068edd9d90; external validation sha256:c98e2d666c2515b03d134a6bdcdaf91871717a8cd1c39c56c68ef31d959c0fe1; isolation sha256:0188347c0f9993de046aaaca9a9a756b4578b0f0c8dc58766d9052d8b940f25f; custody sha256:27282f7c9b7b00ce1e66c34d2788ae43824b8714a5f7fb00524b3cf04fe89468.

Prohibited inputs.

- no V1/V2 proof artifact, conventional continuum law, fitted constitutive equation or named mechanism as premise
- no numerical zero, negative, irrational, imaginary, floating, fitted or free proof magnitude
- structural absence and opposed direction remain held labels
- no target value, official source, measured micrograph, selected specimen or favourable outcome selects a survivor
- no omitted adverse, absent, unavailable, unresolved, tampered or scope-boundary evidence row
- no first failed route retires an obligation and no engine, verifier, receipt or admitted certificate change

104. Curvature-driven grain growth

Field: defects_microstructure_interfaces_multiscale Obligation: SFT-MAT-OBL-MICRO-004 Claim: SFT-MAT-MICRO-GRAIN-GROWTH-004

Question, law and forced result. Discrete curvature is the exact boundary-cell to grain-cell part; one lawful growth step transfers a cell from greater to lesser curvature while preserving the complete material carrier.

MICRO-004 uniquely retains boundary-cell-per-grain-cell-curvature-transfer with complete carrier, organization, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

105. Interface and grain-boundary segregation

Field: defects_microstructure_interfaces_multiscale Obligation: SFT-MAT-OBL-MICRO-005 Claim: SFT-MAT-MICRO-BOUNDARY-SEGREGATION-005

Question, law and forced result. Boundary segregation is the complete species-by-species comparison of exact bulk and boundary parts, retaining enrichment, depletion, equality and structural absence without signed concentration.

MICRO-005 uniquely retains species-wise-bulk-boundary-part-comparison with complete carrier, organization, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001

- no omitted adverse, absent, unavailable, unresolved, tampered or scope-boundary evidence row
- no first failed route retires an obligation and no engine, verifier, receipt or admitted certificate change

107. Ostwald-type coarsening as exact carrier transfer

Field: defects_microstructure_interfaces_multiscale Obligation: SFT-MAT-OBL-MICRO-007 Claim: SFT-MAT-MICRO-COARSENING-TRANSFER-007

Question, law and forced result. Coarsening is conserved exact carrier transfer from a declared donor particle to a receiver particle, with donor disappearance held as structural absence and no unaccounted material gain.

MICRO-007 uniquely retains conserved-particle-carrier-transfer-and-absence with complete carrier, organization, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001

Complete-field family: Phase Equilibria Transformations Metastability

110. Complete multiphase fraction ledger

Field: phase_equilibria_transformations_metastability Obligation: SFT-MAT-OBL-PHASE-001 Claim: SFT-MAT-PHASE-FRACTION-LEDGER-001

Question, law and forced result. A multiphase material state is the complete partition of one finite specimen carrier into held phase classes; every exact phase part is retained and the parts recompose the One.

PHASE-001 uniquely retains complete-held-phase-partition-and-one-recomposition with complete carrier, organization, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-CHEM-PHASE-RULE-STRUCTURAL-011
- SFT-CHEM-ONE-COMPONENT-PHASE-BOUNDARY-012
- SFT-CHEM-MULTICOMPONENT-PHASE-DIAGRAM-013
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-SPECIMEN-001
- SFT-MAT-MEAS-PHASE-001
- SFT-MAT-MEAS-TRACEABILITY-001
- SFT-MAT-MICRO-MULTISCALE-CORRESPONDENCE-009

The complete owner/dependency graph in census/materials_hand_001_006_dependency_registry_v1.json independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Generate the complete literal product of the eight registered PHASE-001 preservation axes before external target release.

Boundary: Every positive finite generated PHASE-001 carrier, with complete constituent, phase, site, path, specimen, method, condition, scale, uncertainty and proof distinctions.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

111. Tie-line and lever-partition relation

Field: phase_equilibria_transformations_metastability Obligation: SFT-MAT-OBL-PHASE-002 Claim: SFT-MAT-PHASE-TIE-LINE-LEVER-002

Question, law and forced result. A coexistence tie-line retains both endpoint compositions and the bulk coordinate; the two exact opposite-span parts uniquely reconstruct the bulk and recompose the One.

PHASE-002 uniquely retains coexistence-endpoint-tie-line-and-opposite-span-partition with complete carrier, organization, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001

Prohibited inputs.

- no V1/V2 proof artifact, continuum thermodynamic potential, named phase equation, fitted constitutive law or consensus classification as premise
- no numerical zero, negative, irrational, imaginary, floating, fitted or free proof magnitude

- structural absence, opposed orientation and boundary equality remain held labels
- no target value, source fragment, measured transition, favourable specimen or database outcome selects a survivor
- no omitted adverse, absent, unavailable, unresolved, tampered or condition-bound evidence row
- no failed attempt retires an obligation and no engine, verifier, receipt or admitted certificate changes

113. Metastable-state retention boundary

Field: phase_equilibria_transformations_metastability Obligation: SFT-MAT-OBL-PHASE-004 Claim: SFT-MAT-PHASE-METASTABLE-RETENTION-004

Question, law and forced result. A metastable state is a nonterminal held state retained through a positive observation interval on a complete path before an exact escape transition; its history and boundary cannot be erased.

PHASE-004 uniquely retains nonterminal-state-retention-until-exact-escape-transition with complete carrier, organization, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001

114. Spinodal-equivalent instability organisation

Field: phase_equilibria_transformations_metastability Obligation: SFT-MAT-OBL-PHASE-005 Claim: SFT-MAT-PHASE-SPINODAL-INSTABILITY-005

Question, law and forced result. A finite composition neighbourhood is separation-amplifying exactly when the doubled centre energy count exceeds the two-neighbour sum; the opposed orientation and equality boundary remain labels, never negative curvature.

PHASE-005 uniquely retains three-site-separation-amplifying-or-restoring-instability-ledger with complete carrier, organization, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001

116. Reconstructive transformation path

Field: phase_equilibria_transformations_metastability Obligation: SFT-MAT-OBL-PHASE-007 Claim: SFT-MAT-PHASE-RECONSTRUCTIVE-007

Question, law and forced result. A reconstructive transformation preserves the complete atom carrier while breaking and forming exact bonds so that the connectivity topology changes and the full path remains reconstructible.

PHASE-007 uniquely retains carrier-conserving-bond-breaking-and-forming-topology-change with complete carrier, organization, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001

- no omitted adverse, absent, unavailable, unresolved, tampered or condition-bound evidence row
- no failed attempt retires an obligation and no engine, verifier, receipt or admitted certificate changes

117. Order-disorder transition

Field: phase_equilibria_transformations_metastability Obligation: SFT-MAT-OBL-PHASE-008 Claim: SFT-MAT-PHASE-ORDER-DISORDER-008

Question, law and forced result. Order and disorder are exact site-by-site relations between two words over the same conserved constituent carrier, retaining matching and reassigned parts without a fitted order parameter.

PHASE-008 uniquely retains same-carrier-site-match-and-reassignment-order-ledger with complete carrier, organization, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- no omitted adverse, absent, unavailable, unresolved, tampered or condition-bound evidence row
- no failed attempt retires an obligation and no engine, verifier, receipt or admitted certificate changes

Complete-field family: Mechanical Fracture Fatigue Creep Tribology Rheology

120. Tensor-resolved stress-strain response

Field: mechanical_fracture_fatigue_creep_tribology_rheology Obligation: SFT-MAT-OBL-MECH-001
Claim: SFT-MAT-MECH-TENSOR-STRESS-STRAIN-001

Question, law and forced result. Mechanical response is a complete exact axis-by-axis ledger of positive load, extension and held orientation; no scalar average erases tensor distinctions.

MECH-001 uniquely retains axis-resolved-held-orientation-load-extension-ledger with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001

121. Transverse-to-longitudinal strain relation

Field: mechanical_fracture_fatigue_creep_tribology_rheology Obligation: SFT-MAT-OBL-MECH-002

Claim: SFT-MAT-MECH-TRANSVERSE-STRAIN-002

Question, law and forced result. Transverse response is the exact positive magnitude part of longitudinal extension with contraction or expansion retained as a label, never a signed quantity.

MECH-002 uniquely retains transverse-longitudinal-positive-part-and-held-direction with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001

Measurement receipt sha256:9d86ef160654270e355aaadeec355bdc4da6579f57489a8162624170438c218; empirical validation sha256:1f4cc749fbf035edc5900b4038c7ad2727ee320c45bc6a008167d4c062708a5c; external validation sha256:008e0a6b0d5d30d1fee7306d9e6abc50e11b5654d308f899af9ec38b83ce3abe; isolation sha256:a81f48eedda4d673cc1662263b08d8382fe30d582e0c912d5d5287e5f81419c2; custody sha256:82df9cd2363118308793e7c4f8fd74a538ba06cc9bd437e272af80eda56a3a59.

Prohibited inputs.

- no imported continuum law, fitted constitutive equation, named mechanism or prior proof as premise
- no numerical zero, negative, irrational, imaginary, floating, fitted or free proof magnitude
- absence and opposed direction remain held labels
- no external outcome selects a survivor
- all adverse and boundary rows retained
- no failed attempt retires an obligation or changes protected authority

123. Viscoplastic flow relation

Field: mechanical_fracture_fatigue_creep_tribology_rheology Obligation: SFT-MAT-OBL-MECH-004
Claim: SFT-MAT-MECH-VISCOPLASTIC-FLOW-004

Question, law and forced result. Viscoplastic flow is exact applied deformation partitioned into recovered and permanently retained parts after the observation word closes.

MECH-004 uniquely retains applied-recovered-permanent-deformation-partition with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001

127. Stable and unstable crack-growth relation

Field: mechanical_fracture_fatigue_creep_tribology_rheology Obligation: SFT-MAT-OBL-MECH-008

Claim: SFT-MAT-MECH-CRACK-GROWTH-008

Question, law and forced result. Crack growth is a complete nondecreasing length word whose terminal state is held below or at the registered instability boundary.

MECH-008 uniquely retains nondecreasing-crack-word-and-instability-boundary with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001

128. Cyclic fatigue initiation and propagation

Field: mechanical_fracture_fatigue_creep_tribology_rheology Obligation: SFT-MAT-OBL-MECH-009
Claim: SFT-MAT-MECH-FATIGUE-009

Question, law and forced result. Fatigue retains every counted cycle, the first initiation cycle and every later crack record; no cycle-average erases propagation history.

MECH-009 uniquely retains cycle-initiation-propagation-complete-history with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001

131. Friction and contact-state relation

Field: mechanical_fracture_fatigue_creep_tribology_rheology Obligation: SFT-MAT-OBL-MECH-012

Claim: SFT-MAT-MECH-FRICTION-CONTACT-012

Question, law and forced result. Friction retains exact tangential and normal carriers, their rational part and the complete contact population and condition.

MECH-012 uniquely retains tangential-normal-contact-population-ledger with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001

Complete-field family: Thermal Transport Storage Expansion Thermoelectric

134. Thermal diffusivity relation

Field: thermal_transport_storage_expansion_thermoelectric Obligation: SFT-MAT-OBL-THERM-001
Claim: SFT-MAT-THERM-DIFFUSIVITY-001

Question, law and forced result. Thermal diffusivity is the exact rational part of the conductivity carrier over the complete density-times-specific-heat storage carrier, with all specimen conditions retained.

THERM-001 uniquely retains conductivity-over-density-specific-heat-exact-diffusivity-part with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-SPECIMEN-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-MEAS-TRACEABILITY-001
- SFT-MAT-THERM-HEAT-CAPACITY-001
- SFT-MAT-THERM-CONDUCTION-001
- SFT-MAT-THERM-EXPANSION-001
- SFT-MAT-CRYST-PHONON-THERMAL-LIMITS-002
- SFT-MAT-PHASE-TIME-TEMPERATURE-010
- SFT-MAT-MECH-FATIGUE-009
- SFT-MAT-MECH-FRACTURE-ENERGY-007

The complete owner/dependency graph in census/materials_hand_001_006_dependency_registry_v1.json independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Complete literal product of eight THERM-001 binary axes before target release.

Boundary: Every positive finite THERM-001 carrier with complete condition, path and observation distinctions.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Shared claim-record clause MAT-S014 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Measurement receipt sha256:a339c5b9bd5cdf3b375104574e10479fef2a91b422ba4e51d438c3d83d89101a; empirical validation sha256:4f50c05fb0d3ece302077e007a9cd1293ae0921d98b18707d230bcf012f673ac; external validation sha256:1f0d62f5b1c8dd4d47051df78f7ab8de8f7674bc301db2038279a7cc2c02fd3a; isolation sha256:cf70b510d0cab4f4f0f779c0615fffc8ef7b57951bf8270a02d4ef7f7bdf0a8; custody sha256:eedec28cf4fb9b729008984049c982d90041ca1c20355fa30575ab7a9a9b9fb3.

Prohibited inputs.

- no imported continuum transport law, fitted constitutive equation, named mechanism or prior proof as premise
- no numerical zero, negative, irrational, imaginary, floating, fitted or free proof magnitude
- absence and thermal orientation remain held labels
- no external outcome selects a survivor
- all favourable, adverse, absent, unavailable and boundary rows remain retained
- no failed attempt retires an obligation or changes protected authority

138. Thermoelectric coupled-response performance boundary

Field: thermal_transport_storage_expansion_thermoelectric Obligation: SFT-MAT-OBL-THERM-005

Claim: SFT-MAT-THERM-THERMOELECTRIC-BOUNDARY-005

Question, law and forced result. Thermoelectric performance is the exact coupled rational relation of the Seebeck carrier squared and temperature carrier to retained resistivity and thermal-conductivity carriers.

THERM-005 uniquely retains seebeck-squared-temperature-over-resistivity-conductivity-boundary with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001

Post-seal external comparison. Target opened after seal: `true`. Evaluator verified seal: `true`. All rows preserved: `true`. Comparison passed: `true`.

Source identities:

- NIST - FRACTOGRAPHY - THERMAL - SHOCK
- NIST - THERMAL - SHOCK - SILICON - NITRIDE

Measured, observed, adverse and boundary records:

- THERM-007: 2 comparisons
- family sources: 12
- exact correspondence: `True`; omission rejected: `True`
- NIST-FRACTOGRAPHY-THERMAL-SHOCK: Thermal stresses and strains occur; cyclic fatigue
- NIST-THERMAL-SHOCK-SILICON-NITRIDE: critical quench temperature for failure; extension of Vickers radial cracks

Shared claim-record clause MAT - S014 **applies.** The full, unchanged clause is preserved in the shared-clause appendix.

Measurement receipt sha256: 7af1729a56a4d706e505cb9d0d6638c883d6831f4eeb9392b3870e9d2ad5b4f1; empirical validation sha256: 6e4a2ff52f8560effb02974230ff10ccbd48dab13dd9766c720b816fb400319c; external validation sha256: ab511999f024ad83e8eaa4e21049859445415c9cc728bf03abad7b960c4cda85; isolation sha256: 2327b3edafe0c30411168ff69256a007fd22d1c097643d7530e1b1f398d60e3b; custody sha256: 3d91b20f53cc2326a7f9498c558f06ea043f224bc6217e37dbd2bb742d3de546.

Prohibited inputs.

- no imported continuum transport law, fitted constitutive equation, named mechanism or prior proof as premise
- no numerical zero, negative, irrational, imaginary, floating, fitted or free proof magnitude
- absence and thermal orientation remain held labels
- no external outcome selects a survivor
- all favourable, adverse, absent, unavailable and boundary rows remain retained
- no failed attempt retires an obligation or changes protected authority

Complete-field family: Electronic Dielectric Semiconductor Ionic Transport

141. Electrical conductivity and resistivity relation

Field: `electronic_dielectric_semiconductor_ionic_transport` Obligation: `SFT-MAT-OBL-ELEC-001`

Claim: `SFT-MAT-ELEC-CONDUCTIVITY-RESISTIVITY-001`

Question, law and forced result. Conductivity and resistivity are exact reciprocal positive rational relations with specimen geometry retained.

ELEC-001 uniquely retains reciprocal-conductivity-resistivity-specimen-ledger with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001

- absence and carrier orientation remain held labels
- no external outcome selects a survivor
- all result classes retained
- no failed attempt retires an obligation or changes protected authority

145. Ionic conductivity and transference

Field: electronic_dielectric_semiconductor_ionic_transport Obligation: SFT-MAT-OBL-ELEC-005

Claim: SFT-MAT-ELEC-IONIC-TRANSFERENCE-005

Question, law and forced result. Ionic transport is the complete species-labelled partition of the total mobile carrier with exact transference parts.

ELEC-005 uniquely retains species-labelled-ionic-transference-partition with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001

Prohibited inputs.

- no imported transport equation, continuum band model, fitted constitutive law or named mechanism as premise
- no numerical zero, negative, irrational, imaginary, floating, fitted or free proof magnitude
- absence and carrier orientation remain held labels
- no external outcome selects a survivor
- all result classes retained
- no failed attempt retires an obligation or changes protected authority

148. Band-alignment and interface offset

Field: electronic_dielectric_semiconductor_ionic_transport Obligation: SFT-MAT-OBL-ELEC-008

Claim: SFT-MAT-ELEC-BAND-ALIGNMENT-008

Question, law and forced result. Band alignment retains both positive levels, exact offset magnitude, held ordering and interface identity without signed proof magnitudes.

ELEC-008 uniquely retains two-level-offset-held-order-interface-alignment with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001

- SFT-INFO-CONSERVATION-LOSS-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-SPECIMEN-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-MEAS-TRACEABILITY-001
- SFT-MAT-THERM-THERMOELECTRIC-BOUNDARY-005
- SFT-MAT-ELEC-FINITE-BARRIER-TUNNELLING-007

The complete owner/dependency graph in `census/materials_hand_001_006_dependency_registry_v1.json` independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Complete literal product of eight ELEC-008 axes before target release.

Boundary: Every positive finite ELEC-008 carrier with complete path and observation distinctions.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

149. Heterostructure carrier confinement

Field: electronic_dielectric_semiconductor_ionic_transport Obligation: SFT-MAT-OBL-ELEC-009

Claim: SFT-MAT-ELEC-CARRIER-CONFINEMENT-009

Question, law and forced result. Carrier confinement is the exact retained depth of a positive level below a held interface barrier in a named layer.

ELEC-009 uniquely retains below-barrier-layer-held-carrier-confinement with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001

152. Electrochemical insertion and material-state response

Field: electronic_dielectric_semiconductor_ionic_transport Obligation: SFT-MAT-OBL-ELEC-012

Claim: SFT-MAT-ELEC-ELECTROCHEMICAL-INSERTION-012

Question, law and forced result. Electrochemical insertion retains host capacity, inserted and removed carriers and the complete operando material-state path.

ELEC-012 uniquely retains host-inserted-removed-operando-state-path with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-SPECIMEN-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-MEAS-TRACEABILITY-001
- SFT-MAT-THERM-THERMOELECTRIC-BOUNDARY-005
- SFT-MAT-ELEC-SCREENING-DEPLETION-011

The complete owner/dependency graph in `census/materials_hand_001_006_dependency_registry_v1.json` independently proves this claim reaches **SFT-ROOT-THERE-IS-NO-NOTHING**.

Complete candidate grammar. Complete literal product of eight ELEC-012 axes before target release.

Boundary: Every positive finite ELEC-012 carrier with complete path and observation distinctions.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

- complete-positive-electrical-carrier
- host-inserted-removed-operando-state-path

155. Spin-glass freezing and history

Field: magnetism_spin_superconductivity_superfluidity Obligation: SFT-MAT-OBL-MAGSC-003 Claim: SFT-MAT-MAGSC-SPIN-GLASS-FREEZING-003

Question, law and forced result. Spin-glass freezing is the first frozen state on a complete temperature and preparation-history word.

MAGSC-003 uniquely retains temperature-state-preparation-freezing-history with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-SPECIMEN-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-MEAS-TRACEABILITY-001
- SFT-PHYS-FIELD-MAGNETIC-001
- SFT-MAT-MAG-FERROMAGNETISM-001
- SFT-MAT-MAG-ANTIFERROMAGNETISM-001
- SFT-MAT-SC-ZERO-RESISTANCE-001
- SFT-MAT-SF-SUPERFLUID-001
- SFT-MAT-ELEC-ELECTROCHEMICAL-INSERTION-012
- SFT-MAT-MAGSC-DIAMAGNETIC-RESPONSE-002

The complete owner/dependency graph in `census/materials_hand_001_006_dependency_registry_v1.json` independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Complete literal product of eight MAGSC-003 axes before target release.

Boundary: Every positive finite MAGSC-003 carrier with complete path and observation distinctions.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

- complete-positive-magnetic-carrier
- temperature-state-preparation-freezing-history
- complete-field-spin-vortex-flow-path
- specimen-method-field-temperature-uncertainty-held
- complete-trace
- root-bound-forward-forcing
- positive-finite-successor-closure
- no-extra-rule

Unique survivor: complete-positive-magnetic-carrier__temperature-state-preparation-freezing-history__complete-field-spin-vortex-flow-path__specimen-method-field-temperature-uncertainty-held__complete-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Closure: depth_independent; minimality true; named-shape uniqueness true; proof

156. Magnetic domains and walls

Field: magnetism_spin_superconductivity_superfluidity Obligation: SFT-MAT-OBL-MAGSC-004 Claim: SFT-MAT-MAGSC-DOMAINS-WALLS-004

Question, law and forced result. Magnetic domains retain exact domain and wall populations and the complete nucleation-growth-motion-disappearance path.

MAGSC-004 uniquely retains domain-wall-nucleation-growth-motion-disappearance with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001

159. Magnetoresistance and field-response relation

Field: magnetism_spin_superconductivity_superfluidity Obligation: SFT-MAT-OBL-MAGSC-007 Claim: SFT-MAT-MAGSC-MAGNETORESISTANCE-007

Question, law and forced result. Magnetoresistance retains base and field-response carriers, exact rational change and held field orientation.

MAGSC-007 uniquely retains base-field-response-orientation-magnetoresistance with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-MAT-MEAS-MATERIAL-001

162. Superconducting vortex matter and pinning

Field: magnetism_spin_superconductivity_superfluidity Obligation: SFT-MAT-OBL-MAGSC-010 Claim: SFT-MAT-MAGSC-SC-VORTEX-PINNING-010

Question, law and forced result. Vortex matter is the exact partition of a complete vortex population into pinned and mobile carriers with lattice identity retained.

MAGSC-010 uniquely retains pinned-mobile-vortex-lattice-partition with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001

- SFT-INFO-CONSERVATION-LOSS-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-SPECIMEN-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-MEAS-TRACEABILITY-001
- SFT-PHYS-FIELD-MAGNETIC-001
- SFT-MAT-MAG-FERROMAGNETISM-001
- SFT-MAT-MAG-ANTIFERROMAGNETISM-001
- SFT-MAT-SC-ZERO-RESISTANCE-001
- SFT-MAT-SF-SUPERFLUID-001
- SFT-MAT-ELEC-ELECTROCHEMICAL-INSERTION-012
- SFT-MAT-MAGSC-SC-CRITICAL-FIELDS-009

The complete owner/dependency graph in `census/materials_hand_001_006_dependency_registry_v1.json` independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Complete literal product of eight MAGSC-010 axes before target release.

Boundary: Every positive finite MAGSC-010 carrier with complete path and observation distinctions.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

- complete-positive-magnetic-carrier
- pinned-mobile-vortex-lattice-partition

166. Reflection and transmission ledger

Field: optics_photonics_polarization_electromagnetic_materials Obligation: SFT-MAT-OBL-OPT-002
Claim: SFT-MAT-OPT-REFLECTION-TRANSMISSION-002

Question, law and forced result. Reflection and transmission are exact positive parts of one incident carrier with retained specimen geometry and any internally retained optical support.

OPT-002 uniquely retains incident-reflection-transmission-retained-geometry-ledger with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-FIELD-ELECTROMAGNETIC-COMPOSITION-001
- SFT-PHYS-WAVE-INTERFERENCE-001
- SFT-PHYS-WAVE-EXACT-OPERATIONS-003
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-SPECIMEN-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-MEAS-TRACEABILITY-001
- SFT-MAT-OPT-REFRACTIVE-001
- SFT-MAT-SEMI-OPTICAL-001
- SFT-MAT-FUNC-PHOTONIC-001
- SFT-MAT-ELEC-ELECTROCHEMICAL-INSERTION-012

- SFT-MAT-OPT-ABSORPTION-EXTINCTION-001

The complete owner/dependency graph in census/materials_hand_001_006_dependency_registry_v1.json independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Complete literal product of eight OPT-002 axes before target release.

Boundary: Every positive finite OPT-002 carrier with complete state, channel, path and observation distinctions.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

167. Luminescence and quantum-yield custody

Field: optics_photonics_polarization_electromagnetic_materials Obligation: SFT-MAT-OBL-OPT-003
Claim: SFT-MAT-OPT-LUMINESCENCE-YIELD-003

Question, law and forced result. Luminescence is an exact partition of absorbed excitations into emitted and nonradiative outcomes; quantum yield is the exact emitted part with excitation and emission identities retained.

OPT-003 uniquely retains absorbed-emitted-nonradiative-quantum-yield-partition with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001

- no numerical zero, negative, irrational, imaginary, floating, fitted or free proof magnitude

- orientation, polarization, channel and structural absence remain held labels
- no external outcome selects a survivor
- all result classes and the initial source limitation remain retained
- no failed attempt retires an obligation or changes protected authority

169. Birefringence and optical anisotropy

Field: optics_photonics_polarization_electromagnetic_materials Obligation: SFT-MAT-OBL-OPT-005
Claim: SFT-MAT-OPT-BIREFRINGENCE-ANISOTROPY-005

Question, law and forced result. Optical anisotropy retains two positive response carriers, their distinct polarizations and axis, exact ratio and positive gap magnitude with ordering as a held label.

OPT-005 uniquely retains two-polarization-axis-ratio-positive-gap-anisotropy with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-INFO-CONSERVATION-LOSS-001

170. Nonlinear optical mixing response

Field: optics_photonics_polarization_electromagnetic_materials Obligation: SFT-MAT-OBL-OPT-006
 Claim: SFT-MAT-OPT-NONLINEAR-MIXING-006

Question, law and forced result. Nonlinear optical mixing retains every positive input, output, polarization and complete sum, positive-difference or harmonic relation without importing a continuum field equation.

OPT-006 uniquely retains input-output-polarization-sum-difference-harmonic-mixing with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001

- no failed attempt retires an obligation or changes protected authority

173. Plasmonic collective response

Field: optics_photonics_polarization_electromagnetic_materials Obligation: SFT-MAT-OBL-OPT-009

Claim: SFT-MAT-OPT-PLASMONIC-RESPONSE-009

Question, law and forced result. Plasmonic response is the exact partition of interface excitation into a retained collective mode and dissipated support with mode and interface identity preserved.

OPT-009 uniquely retains interface-collective-dissipated-plasmonic-mode-partition with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-FIELD-ELECTROMAGNETIC-COMPOSITION-001

Shared claim-record clause MAT-S014 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Measurement receipt sha256: da865a009513d477616a2ffc5566d14722d0b67bd4e88498df08098f84588dc3; empirical validation sha256: 76935a0358d3aacb0f0b0f42d837214f93573eb16613718574bdfe2d93f2575c; external validation sha256: a50ee37dfbbb1eb0e476df4a5cda4aac7f4778c68f972cb41c14547f74b39dcb; isolation sha256: 93aa8fa2b44268729a7dde02699c0942a2e0edf4d906349639260eff43b78597; custody sha256: 0ceb14a20927b4bc73143cfe26698ffe22d5f1678ab430ba6e0474464db0e892.

Prohibited inputs.

- no imported constitutive equation, fitted class threshold, named mechanism or prior proof as premise
- no numerical zero, negative, irrational, imaginary, floating, fitted or free proof magnitude
- structural absence, class, phase, orientation, topology and response remain held labels
- no external outcome selects a survivor
- all result classes remain retained
- no failed attempt retires an obligation or changes protected authority

176. Ordered intermetallic compound organisation

Field: metals_alloys_ceramics_glasses_polymers_composites Obligation: SFT-MAT-OBL-CLASS-002
Claim: SFT-MAT-CLASS-INTERMETALLIC-ORDER-002

Question, law and forced result. An ordered intermetallic retains compound identity, every distinguishable site, its occupant count and the exact site partition.

CLASS-002 uniquely retains ordered-site-occupancy-compound-partition with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001

177. Compositionally complex alloy boundary

Field: metals_alloys_ceramics_glasses_polymers_composites Obligation: SFT-MAT-OBL-CLASS-003

Claim: SFT-MAT-CLASS-HIGH-ENTROPY-BOUNDARY-003

Question, law and forced result. A compositionally complex alloy retains every distinct component, its exact positive part and every resulting phase label; no named entropy threshold or selected phase is imported.

CLASS-003 uniquely retains complete-component-phase-complex-alloy-boundary with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001

183. Structural and functional ceramic subclasses

Field: metals_alloys_ceramics_glasses_polymers_composites Obligation: SFT-MAT-OBL-CLASS-009

Claim: SFT-MAT-CLASS-CERAMIC-SUBCLASSES-009

Question, law and forced result. Ceramic subclasses retain composition and process while structural and functional response roles remain separately observable.

CLASS-009 uniquely retains structural-functional-composition-process-ceramic-subclasses with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001

184. Thermoplastic, thermoset and elastomer distinction

Field: metals_alloys_ceramics_glasses_polymers_composites Obligation: SFT-MAT-OBL-CLASS-010

Claim: SFT-MAT-CLASS-POLYMER-SUBCLASSES-010

Question, law and forced result. Thermoplastic reshaping, thermoset permanent crosslinking and elastomeric recovery are three separately retained response histories.

CLASS-010 uniquely retains thermoplastic-thermoset-elastomer-response-distinction with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001

186. Architected and cellular materials

Field: metals_alloys_ceramics_glasses_polymers_composites Obligation: SFT-MAT-OBL-CLASS-012
 Claim: SFT-MAT-CLASS-ARCHITECTED-CELLULAR-012

Question, law and forced result. An architected cellular material retains nodes, links, cells, topology and response channels so architecture cannot be collapsed into bulk composition alone.

CLASS-012 uniquely retains node-link-cell-topology-response-architecture with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-SPECIMEN-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-MEAS-TRACEABILITY-001
- SFT-MAT-CLASS-METAL-001
- SFT-MAT-CLASS-CERAMIC-001
- SFT-MAT-CLASS-POLYMER-001
- SFT-MAT-CLASS-COMPOSITE-001

- SFT-MAT-CLASS-GLASS-001
- SFT-MAT-CLASS-POROUS-001
- SFT-MAT-PHASE-FRACTION-LEDGER-001
- SFT-MAT-MECH-TENSOR-STRESS-STRAIN-001
- SFT-MAT-THERM-DIFFUSIVITY-001
- SFT-MAT-CLASS-FUNCTIONALLY-GRADED-011

The complete owner/dependency graph in `census/materials_hand_001_006_dependency_registry_v1.json` independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Complete literal product of eight CLASS-012 axes before target release.

Boundary: Every positive finite CLASS-012 material carrier with complete structure, state, path and observation distinctions.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

- complete-positive-material-carrier
- node-link-cell-topology-response-architecture
- complete-structure-state-response-path
- specimen-method-condition-scale-uncertainty-held
- complete-trace
- root-bound-forward-forcing
- positive-finite-successor-closure
- no-extra-rule

Unique survivor: complete-positive-material-carrier__node-link-cell-topology-response-architecture__complete-structure-state-response-path__specimen-method-condition-scale-uncertainty-held__complete-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Closure: depth_independent; minimality true; named-shape uniqueness true; proof

Post-seal external comparison. Target opened after seal: true. Evaluator verified seal: true. All rows preserved: true. Comparison passed: true.

Source identities:

- NIST-AUXETIC-ARCHITECTED

Measured, observed, adverse and boundary records:

- CLASS-012: 1 comparisons
- family sources: 11
- exact correspondence: True; omission rejected: True
- NIST-AUXETIC-ARCHITECTED: Auxetics defy common sense; widening when they're stretched and narrowing when they're compressed

Shared claim-record clause MAT-S014 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Measurement receipt sha256:a3447f484180aa21a8fba614d473e7f7e0e01323d43d4570978f746325d80753; empirical validation sha256:dd683f64e2a31b42ee4650ff3bd775b0c8e8a34b6798c105724983ec735ddd3f; external validation sha256:b0d63bb95c0679ec9f825eaf1b250a4f48862254950d6bd0466ecdaa4c7ba1fa; isolation sha256:6b8120fa65f61a7226538a540739eb2d208f25ac2da0d275c63c9fd979428efa; custody sha256:f536def3c344e0c727171e51b1a32406efb20a79e7359b6e438be2785a4e90c5.

Prohibited inputs.

- no imported constitutive equation, fitted class threshold, named mechanism or prior proof as premise
- no numerical zero, negative, irrational, imaginary, floating, fitted or free proof magnitude
- structural absence, class, phase, orientation, topology and response remain held labels
- no external outcome selects a survivor
- all result classes remain retained
- no failed attempt retires an obligation or changes protected authority

Complete-field family: Soft Colloidal Liquid Crystalline Granular Materials

187. Colloidal stability and aggregation

Field: soft_colloidal_liquid_crystalline_granular_materials Obligation: SFT-MAT-OBL-SOFT-001
Claim: SFT-MAT-SOFT-COLLOID-AGGREGATION-001

Question, law and forced result. A colloid retains the exact positive partition of free and aggregated particles together with interaction and condition labels.

SOFT-001 uniquely retains free-aggregated-interaction-condition-colloid-partition with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001

190. Liquid-crystal orientational order

Field: `soft_colloidal_liquid_crystalline_granular_materials` Obligation: `SFT-MAT-OBL-SOFT-004`

Claim: `SFT-MAT-SOFT-LIQUID-CRYSTAL-ORDER-004`

Question, law and forced result. Liquid-crystal order retains every orientation label and exact positive part, phase and defect record.

SOFT-004 uniquely retains orientation-part-phase-defect-liquid-crystal-order with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- `SFT-FOUNDATION-FORM-ENFORCEMENT-001`
- `SFT-MATH-EXACT-ARITHMETIC-001`
- `SFT-MATH-DISCRETE-001`
- `SFT-MATH-GRAPH-NETWORK-001`
- `SFT-MATH-DYNAMICAL-SYSTEMS-001`
- `SFT-INFO-CONSERVATION-LOSS-001`
- `SFT-MAT-MEAS-MATERIAL-001`
- `SFT-MAT-MEAS-SPECIMEN-001`
- `SFT-MAT-MEAS-PROPERTY-001`
- `SFT-MAT-MEAS-TRACEABILITY-001`
- `SFT-MAT-CLASS-POROUS-001`
- `SFT-MAT-CLASS-COMPOSITE-001`
- `SFT-MAT-MECH-RHEOLOGY-014`
- `SFT-MAT-CLASS-ARCHITECTED-CELLULAR-012`
- `SFT-MAT-SOFT-FOAM-DRAINAGE-003`

The complete owner/dependency graph in `census/materials_hand_001_006_dependency_registry_v1.json` independently proves this claim reaches `SFT-ROOT-THERE-IS-NO-NOTHING`.

Complete candidate grammar. Complete literal product of eight `SOFT-004` axes before target release.

Boundary: Every positive finite `SOFT-004` carrier with complete structure, state, path and observation distinctions.

Shared claim-record clause `MAT-S009` **applies.** The full, unchanged clause is preserved in the shared-clause appendix.

- `complete-positive-soft-carrier`

193. Granular packing and force-chain support

Field: soft_colloidal_liquid_crystalline_granular_materials Obligation: SFT-MAT-OBL-SOFT-007

Claim: SFT-MAT-SOFT-GRANULAR-FORCE-CHAIN-007

Question, law and forced result. Granular support retains grains, contacts, packing and every exact force-chain load part.

SOFT-007 uniquely retains grain-contact-packing-force-chain-support with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-SPECIMEN-001
- SFT-MAT-MEAS-PROPERTY-001

Prohibited inputs.

- no imported continuum constitutive equation, fitted threshold, named mechanism or prior proof as premise
- no numerical zero, negative, irrational, imaginary, floating, fitted or free proof magnitude
- structural absence and all state, phase, topology and path distinctions remain held labels
- no external outcome selects a survivor
- all result classes remain retained
- no failed attempt retires an obligation or changes protected authority

194. Jamming and unjamming boundary

Field: soft_colloidal_liquid_crystalline_granular_materials Obligation: SFT-MAT-OBL-SOFT-008

Claim: SFT-MAT-SOFT-JAMMING-BOUNDARY-008

Question, law and forced result. Jamming retains distinct before and after states, applied and resisted carriers and the complete transition path.

SOFT-008 uniquely retains before-after-applied-resisted-jamming-path with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GRAPH-NETWORK-001

Complete-field family: Biomaterials Biologically Derived Materials

197. Biocompatibility as a material-interface boundary

Field: biomaterials_biologically_derived_materials Obligation: SFT-MAT-OBL-BIO-001 Claim: SFT-MAT-BIO-BIOCOMPATIBILITY-INTERFACE-001

Question, law and forced result. Biocompatibility is a specimen-, interface- and condition-bound exact partition of observed compatible and adverse responses, never an intrinsic unqualified label.

BIO-001 uniquely retains exposure-compatible-adverse-material-interface-ledger with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-SPECIMEN-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-MEAS-TRACEABILITY-001
- SFT-MAT-CLASS-COMPOSITE-001
- SFT-MAT-CLASS-POROUS-001
- SFT-MAT-SOFT-MEMBRANE-THIN-FILM-006
- SFT-MAT-MECH-TENSOR-STRESS-STRAIN-001

The complete owner/dependency graph in `census/materials_hand_001_006_dependency_registry_v1.json` independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Complete literal product of eight BIO-001 axes before target release.

Boundary: Every positive finite BIO-001 carrier with complete material, interface, state, path and observation distinctions.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

- complete-positive-biomaterial-carrier
- exposure-compatible-adverse-material-interface-ledger
- complete-material-interface-state-path
- specimen-method-condition-scale-uncertainty-held
- complete-trace
- root-bound-forward-forcing
- positive-finite-successor-closure
- no-extra-rule

Unique survivor: `complete-positive-biomaterial-carrier__exposure-compatible-adverse-material-interface-ledger__complete-material-interface-state-path__specimen-method-condition-scale-uncertainty-held__complete-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule`.

Closure: `depth_independent; minimality true; named-shape uniqueness true; proof sha256:79d1c3e95096542378cf3fef59ab0f16684e1c72cb3ccb2c469353898cf71580; generality sha256:317b5bfc57f42620625a78412558550182860cde116b113d7d2125222deba97e`.

Shared claim-record clause MAT-S010 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Falsification controls. All four required controls passed:

Prohibited inputs.

- no imported continuum constitutive equation, fitted threshold, named mechanism or prior proof as premise
- no numerical zero, negative, irrational, imaginary, floating, fitted or free proof magnitude
- structural absence and every material, cell, interface, path and product distinction remain held labels
- no external outcome selects a survivor
- all result classes remain retained
- no failed attempt retires an obligation or changes protected authority

204. Biologically derived and biofabricated material identity

Field: biomaterials_biologically_derived_materials Obligation: SFT-MAT-OBL-BIO-008 Claim:
 SFT-MAT-BIO-BIOFABRICATED-IDENTITY-008

Question, law and forced result. A biofabricated material retains biological source, cell state, complete process path and exact input-output custody.

BIO-008 uniquely retains biological-source-cell-process-input-output-custody with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-SPECIMEN-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-MEAS-TRACEABILITY-001
- SFT-MAT-CLASS-COMPOSITE-001
- SFT-MAT-CLASS-POROUS-001
- SFT-MAT-SOFT-MEMBRANE-THIN-FILM-006
- SFT-MAT-MECH-TENSOR-STRESS-STRAIN-001
- SFT-MAT-BIO-MINERALIZED-ORGANIZATION-007

The complete owner/dependency graph in `census/materials_hand_001_006_dependency_registry_v1.json` independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Complete literal product of eight BIO-008 axes before target release.

Boundary: Every positive finite BIO-008 carrier with complete material, interface, state, path and observation distinctions.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Complete-field family: Nanomaterials Two Dimensional Quantum Materials

205. Nanoparticle size and shape distribution

Field: nanomaterials_two_dimensional_quantum_materials Obligation: SFT-MAT-OBL-NANO-001 Claim: SFT-MAT-NANO-SIZE-SHAPE-DISTRIBUTION-001

Question, law and forced result. A nanoparticle population is an exact finite ledger of particle identities, three counted dimensions, held shape labels and the complete generated distribution; no mean or fitted continuum replaces its members.

NANO-001 uniquely retains particle-identity-three-dimension-shape-complete-distribution with complete carrier, organization, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001

- all favourable, adverse, absent, unavailable and unresolved result classes remain retained
- no failed attempt retires an obligation or changes protected authority

208. Quantum-dot finite confinement

Field: nanomaterials_two_dimensional_quantum_materials Obligation: SFT-MAT-OBL-NANO-004 Claim: SFT-MAT-NANO-QUANTUM-DOT-CONFINEMENT-004

Question, law and forced result. A quantum dot retains finite counted support, boundary support, carrier identity and every distinguished level label as one exact confinement record.

NANO-004 uniquely retains finite-site-boundary-carrier-level-confinement with complete carrier, organization, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-SPECIMEN-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-MEAS-TRACEABILITY-001
- SFT-MAT-CRYST-LATTICE-001
- SFT-MAT-CRYST-UNIT-CELL-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-NANOMATERIAL-001
- SFT-MAT-NANO-LAYER-STACKING-003
- SFT-MAT-OPT-EXCITON-DYNAMICS-010

The complete owner/dependency graph in census/materials_hand_001_006_dependency_registry_v1.json independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Complete literal product of eight NANO-004 axes before target release.

Boundary: Every positive finite NANO-004 carrier with complete particle, layer, boundary, interface, state, path and observation distinctions.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

209. Surface-to-volume dominance relation

Field: nanomaterials_two_dimensional_quantum_materials Obligation: SFT-MAT-OBL-NANO-005 Claim: SFT-MAT-NANO-SURFACE-VOLUME-DOMINANCE-005

Question, law and forced result. For every generated cubic cellular support with positive interior, exact enumeration forces the boundary-cell part to fall under one-width succession; smaller supports therefore carry the larger boundary part without a fitted continuum formula.

NANO-005 uniquely retains counted-boundary-interior-successor-surface-part with complete carrier, organization, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001

211. Quantum-material collective-state classification

Field: nanomaterials_two_dimensional_quantum_materials Obligation: SFT-MAT-OBL-NANO-007 Claim: SFT-MAT-NANO-QUANTUM-COLLECTIVE-STATE-007

Question, law and forced result. A quantum-material collective state retains every local state, every correlation link, the joint-state identity and its topology label; the collective class cannot be reduced to disconnected local labels.

NANO-007 uniquely retains local-correlation-joint-topology-collective-state with complete carrier, organization, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-SPECIMEN-001

212. Moiré and twisted-layer superstructure

Field: nanomaterials_two_dimensional_quantum_materials Obligation: SFT-MAT-OBL-NANO-008 Claim: SFT-MAT-NANO-MOIRE-SUPERSTRUCTURE-008

Question, law and forced result. Two nonidentical layer recurrences force a least positive joint recurrence by complete enumeration, while layer identities and interlayer registry remain held as the moiré superstructure.

NANO-008 uniquely retains two-layer-least-positive-joint-recurrence with complete carrier, organization, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001

- no failed attempt retires an obligation or changes protected authority

Complete-field family: Surfaces Coatings Adhesion Interfacial Response

215. Surface free-state and energy relation

Field: surfaces_coatings_adhesion_interfacial_response Obligation: SFT-MAT-OBL-SURF-001 Claim: SFT-MAT-SURF-FREE-STATE-ENERGY-001

Question, law and forced result. A surface state retains distinct counted bulk and surface supports, every held state label and the observation condition; its exact excess support is a fraction, not an imported continuum energy model.

SURF-001 uniquely retains bulk-surface-state-condition-excess-ledger with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GRAPH-NETWORK-001

218. Coating layer and substrate organisation

Field: surfaces_coatings_adhesion_interfacial_response Obligation: SFT-MAT-OBL-SURF-004 Claim: SFT-MAT-SURF-COATING-SUBSTRATE-004

Question, law and forced result. A coating system is the exact ordered word of substrate, layers, interfaces and process states; no effective single layer may erase its organization.

SURF-004 uniquely retains substrate-layer-interface-process-word with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-SPECIMEN-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-MEAS-TRACEABILITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-NANO-SURFACE-VOLUME-DOMINANCE-005
- SFT-MAT-SURF-ADHESION-SEPARATION-003
- SFT-MAT-SOFT-MEMBRANE-THIN-FILM-006

The complete owner/dependency graph in census/materials_hand_001_006_dependency_registry_v1.json independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Complete literal product of eight SURF-004 axes before target release.

Boundary: Every positive finite SURF-004 carrier with complete surface, interface, state, path and observation distinctions.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

- complete-positive-surface-carrier

219. Surface roughness and scale boundary

Field: surfaces_coatings_adhesion_interfacial_response Obligation: SFT-MAT-OBL-SURF-005 Claim: SFT-MAT-SURF-ROUGHNESS-SCALE-005

Question, law and forced result. Surface roughness is an exact finite height word bound to lateral scale and method, retaining every profile point and its counted range.

SURF-005 uniquely retains height-word-lateral-scale-method-range with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001

222. Interface fracture and delamination

Field: surfaces_coatings_adhesion_interfacial_response Obligation: SFT-MAT-OBL-SURF-008 Claim: SFT-MAT-SURF-DELAMINATION-008

Question, law and forced result. Interface fracture retains layer, substrate, intact and separated link supports and the complete delamination-front path as one exact ledger.

SURF-008 uniquely retains layer-substrate-intact-separated-front-path with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GRAPH-NETWORK-001

Complete-field family: Corrosion Oxidation Wear Radiation Ageing

223. Oxidation scale growth and transport

Field: corrosion_oxidation_wear_radiation_ageing Obligation: SFT-MAT-OBL-DEGR-001 Claim:
SFT-MAT-DEGR-OXIDATION-SCALE-001

Question, law and forced result. Oxidation retains the exact partition of initial material into substrate and scale, transported support and every ordered state.

DEGR-001 uniquely retains initial-substrate-scale-transport-path with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001

Measurement receipt sha256:644808cb9b13f458a4c9def35fcb762b90675e5d86679b231eba08323206bd7b; empirical validation sha256:a6f21442f0be5bd63ffd5a027fd73164db0c415930e06b90204bbd023a14c9a5; external validation sha256:09c7ca44f4c8b0f50510cc7d5502ed908614c0ce2fb933dab3dc43512e71254e; isolation sha256:7fffb61b875c99b341f4781087d1c93ce0028c4c3bca40623b36a0dfb512684c2; custody sha256:fbd8ea7cdc6a5b915311546bc59b930c39307bb3578bb23392f1a5072bbe8582.

Prohibited inputs.

- no imported continuum degradation equation, fitted rate, threshold, named mechanism or prior proof as premise
- no numerical zero, negative, irrational, imaginary, floating, fitted or free proof magnitude
- structural absence and every carrier, defect, interface, condition, state and path distinction remain held labels
- no external outcome selects a survivor
- all result classes remain retained
- no failed attempt retires an obligation or changes protected authority

229. Radiation-defect accumulation and recovery

Field: corrosion_oxidation_wear_radiation_ageing Obligation: SFT-MAT-OBL-DEGR-007 Claim: SFT-MAT-DEGR-RADIATION-DEFECT-RECOVERY-007

Question, law and forced result. Radiation damage retains created, recovered and retained defect carriers, every defect class, exposure and recovery path.

DEGR-007 uniquely retains created-retained-recovered-defect-exposure-path with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-INFO-CONSERVATION-LOSS-001

- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-SPECIMEN-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-MEAS-TRACEABILITY-001
- SFT-MAT-SURF-DELAMINATION-008
- SFT-MAT-DEGR-WEAR-MODE-DISTINCTION-006

The complete owner/dependency graph in `census/materials_hand_001_006_dependency_registry_v1.json` independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Complete literal product of eight DEGR-007 axes before target release.

Boundary: Every positive finite DEGR-007 carrier with complete material, defect, interface, state, path and observation distinctions.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

- complete-positive-degradation-carrier
- created-retained-recovered-defect-exposure-path
- complete-degradation-state-path

230. Physical ageing and property drift

Field: corrosion_oxidation_wear_radiation_ageing Obligation: SFT-MAT-OBL-DEGR-008 Claim: SFT-MAT-DEGR-PHYSICAL-AGEING-008

Question, law and forced result. Physical ageing is an exact condition-bound ordered property record whose rational drift and direction remain held without a fitted continuum law.

DEGR-008 uniquely retains property-condition-time-direction-rational-drift with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001

Complete-field family: Processing Solidification Sintering Heat Treatment Additive

233. Casting and mould-filling material history

Field: processing_solidification_sintering_heat_treatment_additive Obligation:

SFT-MAT-OBL-PROC-001 Claim: SFT-MAT-PROC-CASTING-HISTORY-001

Question, law and forced result. Casting retains charge, filled and retained carriers, every mould region and the complete filling/solidification history.

PROC-001 uniquely retains charge-filled-retained-mould-region-path with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-MATH-DISCRETE-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-SPECIMEN-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-MEAS-TRACEABILITY-001
- SFT-MAT-PHASE-TIME-TEMPERATURE-010
- SFT-MAT-SURF-COATING-SUBSTRATE-004
- SFT-MAT-DEGR-SERVICE-LIFE-EVIDENCE-010

The complete owner/dependency graph in `census/materials_hand_001_006_dependency_registry_v1.json` independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Complete literal product of eight PROC-001 axes before target release.

Boundary: Every positive finite PROC-001 carrier with complete material, layer, interface, orientation, state, path and observation distinctions.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

- complete-positive-processing-carrier

240. Polymer processing and orientation history

Field: processing_solidification_sintering_heat_treatment_additive Obligation:

SFT-MAT-OBL-PROC-008 Claim: SFT-MAT-PROC-POLYMER-ORIENTATION-008

Question, law and forced result. Polymer processing retains each chain orientation before and after processing together with complete process and thermal paths.

PROC-008 uniquely retains chain-before-after-process-thermal-orientation with complete carrier, path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GRAPH-NETWORK-001

- no failed attempt retires an obligation or changes protected authority

244. Structure-property computation boundary

Field: computational_materials_structure_property_inference Obligation: SFT-MAT-OBL-COMP-002

Claim: SFT-MAT-COMP-STRUCTURE-PROPERTY-002

Question, law and forced result. A structure-property computation retains complete structure input, property output, method and scope without promoting correlation to a universal law.

COMP-002 uniquely retains structure-property-scope-method-boundary with complete carrier, trace, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-INFO-CONSERVATION-LOSS-001

245. Finite numerical material simulation

Field: computational_materials_structure_property_inference Obligation: SFT-MAT-OBL-COMP-003

Claim: SFT-MAT-COMP-FINITE-SIMULATION-003

Question, law and forced result. A finite material simulation is the complete exact state and transition trace under a held boundary.

COMP-003 uniquely retains initial-state-transition-finite-trace with complete carrier, trace, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-INFO-CONSERVATION-LOSS-001

247. Numerical stability and error propagation in materials

Field: `computational_materials_structure_property_inference` Obligation: `SFT-MAT-OBL-COMP-005`
Claim: `SFT-MAT-COMP-ERROR-PROPAGATION-005`

Question, law and forced result. Computational uncertainty is an exact positive component ledger whose declared total, scope and propagation custody must close.

COMP-005 uniquely retains positive-component-total-scope-error-ledger with complete carrier, trace, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-COMP-FORM-STATE-TRANSITION-001
- SFT-COMP-FORM-COMPOSITION-001
- SFT-COMP-ALG-NUMERICAL-001
- SFT-COMP-ALG-SYMBOLIC-001

- SFT-COMP-SEM-VERIFICATION-001
- SFT-MAT-MEAS-TRACEABILITY-001
- SFT-MAT-PROC-WINDOW-PROVENANCE-010
- SFT-MAT-COMP-MULTISCALE-COMPOSITION-004

The complete owner/dependency graph in `census/materials_hand_001_006_dependency_registry_v1.json` independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Complete literal product of eight COMP-005 axes before target release.

Boundary: Every positive finite COMP-005 carrier with complete data, state, trace, provenance and observation distinctions.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

- NIST-UNCERTAINTY-PROPAGATION: propagating errors and uncertainties; first-order Taylor series expansion

Shared claim-record clause MAT - S014 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Measurement receipt sha256:c6ae4612fbf0d0bfff28eecf61beb43750ae588668b41eaf9bbdaf994b9d42fa7; empirical validation sha256:af6e94cbc7751f322dacfd177e599717819e0e0ab02be6c6ed71bd2a99db2974; external validation sha256:67b4b9872d3f343e60d28749002b6e979b1b557cf05920d82c64e3b59024ca7a; isolation sha256:3908edee45c501a5bc5ef59b11e86fe73500945c2fba514c9f4eaaef9378a259; custody sha256:9e9ae17ec2691d003b9189a706d0c7dc90c8a092e893794d01779749b26c463c.

Prohibited inputs.

- no imported continuum simulation equation, fitted predictor, opaque oracle or prior proof as premise
- no numerical zero, negative, irrational, imaginary, floating, fitted or free proof magnitude
- structural absence and every data, state, scale, error, provenance, condition and outcome distinction remain held labels
- no external outcome selects a survivor
- all favourable adverse absent unavailable and unresolved result classes remain retained
- no failed attempt retires an obligation or changes protected authority

248. Inverse materials problem

Field: computational_materials_structure_property_inference Obligation: SFT-MAT-OBL-COMP-006
Claim: SFT-MAT-COMP-INVERSE-PROBLEM-006

Question, law and forced result. An inverse material result is admitted only when complete forward enumeration leaves exactly one candidate matching the held observation.

COMP-006 uniquely retains candidate-forward-target-unique-inverse-enumeration with complete carrier, trace, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001

249. Machine-learning materials inference boundary

Field: computational_materials_structure_property_inference Obligation: SFT-MAT-OBL-COMP-007

Claim: SFT-MAT-COMP-LEARNING-BOUNDARY-007

Question, law and forced result. Learning retains training, test, predictions, method and every correct and incorrect row; an opaque score cannot select a law.

COMP-007 uniquely retains training-test-prediction-method-all-outcomes with complete carrier, trace, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001

250. Materials database identity and provenance

Field: computational_materials_structure_property_inference Obligation: SFT-MAT-OBL-COMP-008

Claim: SFT-MAT-COMP-DATABASE-PROVENANCE-008

Question, law and forced result. A materials database is the complete versioned set of unique record identities, payloads and sources.

COMP-008 uniquely retains identity-payload-source-version-database with complete carrier, trace, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-MATH-DISCRETE-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-INFO-CONSERVATION-LOSS-001

251. Phase-field computational correspondence

Field: computational_materials_structure_property_inference Obligation: SFT-MAT-OBL-COMP-009

Claim: SFT-MAT-COMP-PHASE-FIELD-009

Question, law and forced result. Phase-field computation corresponds to an exact finite cell-state word and complete update trace under a held boundary, not an imported continuum premise.

COMP-009 uniquely retains cell-state-update-boundary-phasefield with complete carrier, trace, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-COMP-FORM-STATE-TRANSITION-001
- SFT-COMP-FORM-COMPOSITION-001
- SFT-COMP-ALG-NUMERICAL-001
- SFT-COMP-ALG-SYMBOLIC-001
- SFT-COMP-SEM-VERIFICATION-001
- SFT-MAT-MEAS-TRACEABILITY-001
- SFT-MAT-PROC-WINDOW-PROVENANCE-010
- SFT-MAT-COMP-DATABASE-PROVENANCE-008

The complete owner/dependency graph in `census/materials_hand_001_006_dependency_registry_v1.json` independently proves this claim reaches `SFT-ROOT-THERE-IS-NO-NOTHING`.

Complete candidate grammar. Complete literal product of eight COMP-009 axes before target release.

Boundary: Every positive finite COMP-009 carrier with complete data, state, trace, provenance and observation distinctions.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

- complete-positive-computational-material-carrier
- cell-state-update-boundary-phasefield
- complete-computational-trace

252. Molecular-dynamics computational correspondence

Field: computational_materials_structure_property_inference Obligation: SFT-MAT-OBL-COMP-010

Claim: SFT-MAT-COMP-MOLECULAR-DYNAMICS-010

Question, law and forced result. Molecular dynamics corresponds to held particle identities and the complete exact state-transition trace under declared boundaries.

COMP-010 uniquely retains particle-state-transition-boundary-dynamics with complete carrier, trace, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001

Complete-field family: Materials Under Extreme Conditions

255. High-pressure material state

Field: materials_under_extreme_conditions Obligation: SFT-MAT-OBL-EXT-001 Claim: SFT-MAT-EXT-HIGH-PRESSURE-STATE-001

Question, law and forced result. A high-pressure material state is the complete specimen, positive pressure-step, state-transition, method and uncertainty path; pressure cannot erase phase history.

EXT-001 uniquely retains specimen-pressure-state-transition-method-uncertainty-path with complete carrier, condition path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-INFO-CONSERVATION-LOSS-001

- structural absence and every specimen, condition, state, path, method, scale, uncertainty and outcome distinction remain held labels
- no external outcome selects a survivor
- all favourable adverse absent unavailable and unresolved result classes remain retained
- no failed attempt retires an obligation or changes protected authority

258. High-electric-field material response

Field: materials_under_extreme_conditions Obligation: SFT-MAT-OBL-EXT-004 Claim: SFT-MAT-EXT-ELECTRIC-FIELD-RESPONSE-004

Question, law and forced result. Electric-field response retains every positive field step and material-state transition with specimen, method and uncertainty custody.

EXT-004 uniquely retains positive-electric-field-state-transition-path with complete carrier, condition path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-COMP-FORM-STATE-TRANSITION-001
- SFT-MAT-MEAS-TRACEABILITY-001
- SFT-MAT-PROC-WINDOW-PROVENANCE-010
- SFT-MAT-COMP-SIMULATION-EXPERIMENT-012
- SFT-MAT-EXT-CRYOGENIC-RESPONSE-003
- SFT-MAT-ELEC-DIELECTRIC-LOSS-004

The complete owner/dependency graph in census/materials_hand_001_006_dependency_registry_v1.json independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Complete literal product of eight EXT-004 axes before target release.

Boundary: Every positive finite EXT-004 carrier with complete specimen, condition, state, path, method, uncertainty and observation distinctions.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

- complete-positive-extreme-material-carrier

- exact correspondence: True; omission rejected: True
- NIST-RADIATION-DAMAGE-MEASUREMENT: direct measurements; damaging effects; gamma rays; cosmic rays

Shared claim-record clause MAT - S014 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Measurement receipt sha256:75a4deb98834f22690aea54d2255bc8c2f7c493d08667815af5f74e295cc4bfe; empirical validation sha256:8b843670f14c690b1e3acd821d34bea296f63f4d2dc012190afd84845ac83c4e; external validation sha256:5409ded1c2a6bf81fc2fd7112fefca88179d0d500df6a23879d52d69807c5f79; isolation sha256:c7855a18dab5d01a1ca0f83b4c159d2ad8df253b8dd8714ff08c11e7f71cb8ff; custody sha256:9cf3a96ad7b79a1707802c7ebad5326f01863debfe09831b02488624957b41bd.

Prohibited inputs.

- no imported continuum response equation, fitted constitutive law, opaque oracle or prior proof as premise
- no numerical zero, negative, irrational, imaginary, floating, fitted or free proof magnitude
- structural absence and every specimen, condition, state, path, method, scale, uncertainty and outcome distinction remain held labels
- no external outcome selects a survivor
- all favourable adverse absent unavailable and unresolved result classes remain retained
- no failed attempt retires an obligation or changes protected authority

262. Combined-extreme condition and path custody

Field: materials_under_extreme_conditions Obligation: SFT-MAT-OBL-EXT-008 Claim: SFT-MAT-EXT-COMBINED-PATH-CUSTODY-008

Question, law and forced result. A combined-extreme result retains at least two named conditions jointly at every ordered state; no single-condition projection may stand for the joint path.

EXT-008 uniquely retains joint-named-condition-state-transition-path with complete carrier, condition path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-COMP-FORM-STATE-TRANSITION-001
- SFT-MAT-MEAS-TRACEABILITY-001
- SFT-MAT-PROC-WINDOW-PROVENANCE-010
- SFT-MAT-COMP-SIMULATION-EXPERIMENT-012
- SFT-MAT-EXT-RADIATION-RESPONSE-007

The complete owner/dependency graph in census/materials_hand_001_006_dependency_registry_v1.json independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Complete literal product of eight EXT-008 axes before target release.

Boundary: Every positive finite EXT-008 carrier with complete specimen, condition, state, path, method, uncertainty and observation distinctions.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

- no external outcome selects a survivor
- all favourable adverse absent unavailable and unresolved result classes remain retained
- no failed attempt retires an obligation or changes protected authority

266. Recycling separation and recovery yield

Field: sustainable_material_cycles_lifecycle Obligation: SFT-MAT-OBL-SUST-004 Claim: SFT-MAT-SUST-RECOVERY-YIELD-004

Question, law and forced result. Recovery yield is the exact positive feed partition into recovered and residual parts under a held method and scope.

SUST-004 uniquely retains positive-feed-recovered-residual-method-scope-partition with complete carrier, lifecycle path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-INFO-CONSERVATION-LOSS-001

Prohibited inputs.

- no imported lifecycle equation, fitted score, economic selector, opaque oracle or prior proof as premise
- no numerical zero, negative, irrational, imaginary, floating, fitted or free proof magnitude
- structural absence and every material, amount, identity, path, scope, source, residual and outcome distinction remain held labels
- no external outcome selects a survivor
- all favourable adverse absent unavailable and unresolved result classes remain retained
- no failed attempt retires an obligation or changes protected authority

269. Material toxicity and health handoff

Field: sustainable_material_cycles_lifecycle Obligation: SFT-MAT-OBL-SUST-007 Claim: SFT-MAT-SUST-TOXICITY-HANDOFF-007

Question, law and forced result. Materials owns composition, exposure and observed specimen response; health consequence is exported explicitly to Medicine without erasing the evidence path.

SUST-007 uniquely retains material-exposure-observation-scope-health-owner-handoff with complete carrier, lifecycle path, observation, proof, root provenance, successor closure and no extra rule.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-COMP-FORM-STATE-TRANSITION-001
- SFT-MAT-MEAS-TRACEABILITY-001
- SFT-MAT-DEGR-SERVICE-LIFE-EVIDENCE-010
- SFT-MAT-COMP-SIMULATION-EXPERIMENT-012
- SFT-MAT-EXT-COMBINED-PATH-CUSTODY-008
- SFT-MAT-SUST-DURABILITY-EXTENSION-006

The complete owner/dependency graph in census/materials_hand_001_006_dependency_registry_v1.json independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Complete literal product of eight SUST-007 axes before target release.

Boundary: Every positive finite SUST-007 carrier with complete material, amount, identity, path, scope, source and observation distinctions.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

- complete-positive-sustainable-material-carrier
- material-exposure-observation-scope-health-owner-handoff
- complete-material-lifecycle-path
- specimen-method-condition-scale-uncertainty-held
- complete-trace
- root-bound-forward-forcing
- positive-finite-successor-closure
- no-extra-rule

Unique survivor: complete-positive-sustainable-material-carrier__material-exposure-observation-scope-health-owner-handoff__complete-material-lifecycle-path__specimen-method-condition-scale-uncertainty-held__complete-trace__root-bound-forward-forcing__positive-finite-successor-closure__no-extra-rule.

Closure: depth_independent; minimality true; named-shape uniqueness true; proof sha256: b4ad5a35943fca41fdd4c894840b562220e1f4b37586358920b5bedbe184d1f; generality sha256: 996707b0c91809bdc688746751782978e73fff22f104ae9c9a66ea68cb310d8d.

Shared claim-record clause MAT-S010 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Prohibited inputs.

- no target value, outcome, match rate or measurement selects the validation law

- no fitted threshold, favourable-only sample or omitted member
- no formal-only standing boundary relabelled as a measured outcome
- no finite-complete claim relabelled depth-independent or conversely
- no numerical absence, negative, irrational, imaginary, floating, fitted or free proof magnitude
- no first failed route retires an obligation
- no engine, verifier, prior receipt, certificate or admitted claim change

276. Thermal and transport validation vector

Field: `complete_materials_external_validation` Obligation: SFT-MAT-OBL-VALID-005 Claim: SFT-MAT-VALIDATION-THERMAL-TRANSPORT-VECTOR-005

Question, law and forced result. VALID-005 uniquely requires a complete member-by-member, receipt-bound, post-seal evidence vector across all 7 registered claims, retaining actual closure scopes, all outcomes and every explicit unmeasured boundary.

VALID-005 uniquely requires a complete member-by-member, receipt-bound, post-seal evidence vector across all 7 registered claims, retaining actual closure scopes, all outcomes and every explicit unmeasured boundary.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-MAT-THERM-BOUNDARY-RESISTANCE-002
- SFT-MAT-THERM-DIFFUSIVITY-001
- SFT-MAT-THERM-PHASE-STORAGE-006
- SFT-MAT-THERM-PHONON-MEAN-PATH-003
- SFT-MAT-THERM-RADIATIVE-TRANSPORT-004
- SFT-MAT-THERM-SHOCK-FATIGUE-007
- SFT-MAT-THERM-THERMOELECTRIC-BOUNDARY-005
- SFT-MAT-VALIDATION-MECHANICAL-TRIBOLOGICAL-VECTOR-004

The complete owner/dependency graph in `census/materials_hand_001_006_dependency_registry_v1.json` independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Generate the complete eight-axis VALID-005 evidence-preservation product before capability-closed release of its frozen vector.

Boundary: Exactly the 7 value-free claim identities registered for Materials VALID-005, their current receipt-bound evidence and all result classes.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Prohibited inputs.

- no target value, outcome, match rate or measurement selects the validation law
- no fitted threshold, favourable-only sample or omitted member
- no formal-only standing boundary relabelled as a measured outcome
- no finite-complete claim relabelled depth-independent or conversely
- no numerical absence, negative, irrational, imaginary, floating, fitted or free proof magnitude
- no first failed route retires an obligation
- no engine, verifier, prior receipt, certificate or admitted claim change

278. Magnetic, superconducting and topological validation vector

Field: complete_materials_external_validation Obligation: SFT-MAT-OBL-VALID-007 Claim: SFT-MAT-VALIDATION-MAGNETIC-SUPERCONDUCTING-TOPOLOGICAL-VECTOR-007

Question, law and forced result. VALID-007 uniquely requires a complete member-by-member, receipt-bound, post-seal evidence vector across all 12 registered claims, retaining actual closure scopes, all outcomes and every explicit unmeasured boundary.

VALID-007 uniquely requires a complete member-by-member, receipt-bound, post-seal evidence vector across all 12 registered claims, retaining actual closure scopes, all outcomes and every explicit unmeasured boundary.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-MAT-MAGSC-DIAMAGNETIC-RESPONSE-002

- SFT-MAT-MAGSC-DOMAINS-WALLS-004
- SFT-MAT-MAGSC-HYSTERESIS-LOOP-005
- SFT-MAT-MAGSC-MAGNETOCRYSTALLINE-ANISOTROPY-006

Prohibited inputs.

- no target value, outcome, match rate or measurement selects the validation law
- no fitted threshold, favourable-only sample or omitted member
- no formal-only standing boundary relabelled as a measured outcome
- no finite-complete claim relabelled depth-independent or conversely
- no numerical absence, negative, irrational, imaginary, floating, fitted or free proof magnitude
- no first failed route retires an obligation
- no engine, verifier, prior receipt, certificate or admitted claim change

281. Cross-source Materials reproducibility vector

Field: complete_materials_external_validation Obligation: SFT-MAT-OBL-VALID-010 Claim: SFT-MAT-VALIDATION-CROSS-SOURCE-REPRODUCIBILITY-VECTOR-010

Question, law and forced result. VALID-010 uniquely requires a complete member-by-member, receipt-bound, post-seal evidence vector across all 62 registered claims, retaining actual closure scopes, all outcomes and every explicit unmeasured boundary.

VALID-010 uniquely requires a complete member-by-member, receipt-bound, post-seal evidence vector across all 62 registered claims, retaining actual closure scopes, all outcomes and every explicit unmeasured boundary.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

Prohibited inputs.

- no target value, outcome, match rate or measurement selects the validation law
- no fitted threshold, favourable-only sample or omitted member
- no formal-only standing boundary relabelled as a measured outcome
- no finite-complete claim relabelled depth-independent or conversely
- no numerical absence, negative, irrational, imaginary, floating, fitted or free proof magnitude
- no first failed route retires an obligation
- no engine, verifier, prior receipt, certificate or admitted claim change

282. Complete adverse, absent and out-of-bound Materials vector

Field: complete_materials_external_validation Obligation: SFT-MAT-0BL-VALID-011 Claim:
 SFT-MAT-VALIDATION-ADVERSE-ABSENT-OUT-OF-BOUND-VECTOR-011

Question, law and forced result. VALID-011 uniquely requires a complete member-by-member, receipt-bound, post-seal evidence vector across all 271 registered claims, retaining actual closure scopes, all outcomes and every explicit unmeasured boundary.

VALID-011 uniquely requires a complete member-by-member, receipt-bound, post-seal evidence vector across all 271 registered claims, retaining actual closure scopes, all outcomes and every explicit unmeasured boundary.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

The complete owner/dependency graph in `census/materials_hand_001_006_dependency_registry_v1.json` independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Generate the complete eight-axis VALID-011 evidence-preservation product before capability-closed release of its frozen vector.

Boundary: Exactly the 271 value-free claim identities registered for Materials VALID-011, their current receipt-bound evidence and all result classes.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Prohibited inputs.

- no target value, outcome, match rate or measurement selects the validation law
- no fitted threshold, favourable-only sample or omitted member
- no formal-only standing boundary relabelled as a measured outcome
- no finite-complete claim relabelled depth-independent or conversely
- no numerical absence, negative, irrational, imaginary, floating, fitted or free proof magnitude
- no first failed route retires an obligation
- no engine, verifier, prior receipt, certificate or admitted claim change

283. Materials empirical Grand Lock

Field: complete_materials_external_validation Obligation: SFT-MAT-OBL-VALID-012 Claim: SFT-MAT-VALIDATION-EMPIRICAL-GRAND-LOCK-012

Question, law and forced result. VALID-012 uniquely requires a complete member-by-member, receipt-bound, post-seal evidence vector across all 271 registered claims, retaining actual closure scopes, all outcomes and every explicit unmeasured boundary.

VALID-012 uniquely requires a complete member-by-member, receipt-bound, post-seal evidence vector across all 271 registered claims, retaining actual closure scopes, all outcomes and every explicit unmeasured boundary.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

The complete owner/dependency graph in `census/materials_hand_001_006_dependency_registry_v1.json` independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Generate the complete eight-axis VALID-012 evidence-preservation product before capability-closed release of its frozen vector.

Boundary: Exactly the 271 value-free claim identities registered for Materials VALID-012, their current receipt-bound evidence and all result classes.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Prohibited inputs.

- no target value, outcome, match rate or measurement selects the validation law
- no fitted threshold, favourable-only sample or omitted member
- no formal-only standing boundary relabelled as a measured outcome
- no finite-complete claim relabelled depth-independent or conversely
- no numerical absence, negative, irrational, imaginary, floating, fitted or free proof magnitude
- no first failed route retires an obligation
- no engine, verifier, prior receipt, certificate or admitted claim change

Complete-field family: Cross Branch Handoffs

284. Materials-to-Engineering one-owner handoff

Field: cross_branch_handoffs Obligation: SFT-MAT-OBL-HAND-001 Claim:
SFT-MAT-ENGINEERING-OWNERSHIP-HANDOFF-001

Question, law and forced result. The Materials handoff to engineering_translation preserves complete paired admitted records and exactly one owner per coordinate: materials owns specimen organization, processing history and response while engineering owns designed use and implementation.

HAND-001 uniquely requires the complete receipt-bound pair in which materials owns specimen organization, processing history and response while engineering owns designed use and implementation; consumption is a directed dependency and never duplicate ownership.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-MAT-VALIDATION-EMPIRICAL-GRAND-LOCK-012
- SFT-MAT-PROC-WINDOW-PROVENANCE-010
- SFT-ENG-PHYSICAL-HANDOFF-001

The complete owner/dependency graph in census/materials_hand_001_006_dependency_registry_v1.json independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Generate the complete eight-axis HAND-001 ownership product before opening the registered paired evidence.

Boundary: Exactly the registered HAND-001 owner identities, directed relations, paired receipt records, controls and extension boundary.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Post-seal external comparison. Target opened after seal: true. Evaluator verified seal: true. All rows preserved: true. Comparison passed: true.

Source identities:

- NIST-REPRODUCIBLE-PROCESS-MONITORING
- CISA-SECURE-BY-DESIGN-001

Measured, observed, adverse and boundary records:

- HAND-001: value-free owner registry preceded outcome access
- frozen graph: 1681 claims, 28437 dependency edges, 19852 cross-branch uses
- paired external surface: 15 records, 28 source identities, 54 evidence lines
- all selected evidence rows preserved; omission control rejected True
- materials owns SFT-MAT-PROC-WINDOW-PROVENANCE-010; sources=1; evidence-lines=4; receipt=sha256:0ad7b92e5c8d24cdfc2ee2617314ee031fbf333bf5e0b18f35e9809fa34d261f
- engineering_translation owns SFT-ENG-PHYSICAL-HANDOFF-001; sources=1; evidence-lines=2; receipt=sha256:3c5e2bcfc0353b573de31a1f50e5b60e1983a348e9712b6ada307d889c5bbcf8

Falsification condition: Reject if any registered owner, paired receipt, external record, registration, dependency edge, root trace, control or extension boundary is missing, duplicated, changed or opened before the value-free owner registry.

Measurement receipt sha256:25d54e226d4508afb499cb40e01930979efb5ab5038592ba2744e5eaf1f14c3; empirical validation sha256:ce424d4169d58737d56105a3e4f58f61b5f75aedc7fabe1ac15fa7b23dd5c3e1; external validation sha256:51e8ecc0fd77f9e8c2b07a4fc527eedfae35b7dd9b7e9ada7c4d9534cc476aed; isolation sha256:9a1c5fc81336c5697a80c31de6f8d37b0fcfa92d8326707d43d697fc21e0036c; custody sha256:e4b121fce65b98dcdb98a5a353c77fb99fff8ad13c09b728c13cde5bbcd0951c.

Prohibited inputs.

- no downstream outcome, preferred owner, measurement value or match result selects the law
- no branch may duplicate ownership of a coordinate it consumes
- no application record may redefine a natural-law owner
- no missing dependency or source record is silently ignored
- no fitted threshold, aggregate score, numerical zero, negative, irrational, imaginary or floating proof magnitude

- no failed route retires an obligation
- no engine, verifier, prior receipt, certificate or admitted claim change

285. Materials-to-Biology one-owner handoff

Field: cross_branch_handoffs Obligation: SFT-MAT-OBL-HAND-002 Claim: SFT-MAT-BIOLOGY-OWNERSHIP-HANDOFF-002

Question, law and forced result. The Materials handoff to biology preserves complete paired admitted records and exactly one owner per coordinate: materials owns the material interface and response while biology owns living organization, adhesion and function.

HAND-002 uniquely requires the complete receipt-bound pair in which materials owns the material interface and response while biology owns living organization, adhesion and function; consumption is a directed dependency and never duplicate ownership.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-MAT-VALIDATION-EMPIRICAL-GRAND-LOCK-012
- SFT-MAT-BIO-BIOCOMPATIBILITY-INTERFACE-001
- SFT-BIO-CELL-ADHESION-001
- SFT-BIO-BIO-ASSAY-001
- SFT-MAT-ENGINEERING-OWNERSHIP-HANDOFF-001

The complete owner/dependency graph in census/materials_hand_001_006_dependency_registry_v1.json independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Generate the complete eight-axis HAND-002 ownership product before opening the registered paired evidence.

Boundary: Exactly the registered HAND-002 owner identities, directed relations, paired receipt records, controls and extension boundary.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Prohibited inputs.

- no downstream outcome, preferred owner, measurement value or match result selects the law
- no branch may duplicate ownership of a coordinate it consumes
- no application record may redefine a natural-law owner
- no missing dependency or source record is silently ignored
- no fitted threshold, aggregate score, numerical zero, negative, irrational, imaginary or floating proof magnitude
- no failed route retires an obligation
- no engine, verifier, prior receipt, certificate or admitted claim change

286. Materials-to-Medicine one-owner handoff

Field: cross_branch_handoffs Obligation: SFT-MAT-OBL-HAND-003 Claim:
SFT-MAT-MEDICINE-OWNERSHIP-HANDOFF-003

Question, law and forced result. The Materials handoff to medicine preserves complete paired admitted records and exactly one owner per coordinate: materials owns delivery-medium organization and release while medicine owns intervention, dose and health outcome.

HAND-003 uniquely requires the complete receipt-bound pair in which materials owns delivery-medium organization and release while medicine owns intervention, dose and health outcome; consumption is a directed dependency and never duplicate ownership.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-MAT-VALIDATION-EMPIRICAL-GRAND-LOCK-012
- SFT-MAT-BIO-CONTROLLED-RELEASE-006
- SFT-MED-INTERVENTION-001
- SFT-MED-DOSE-001
- SFT-MED-RESPONSE-001
- SFT-MAT-BIOLOGY-OWNERSHIP-HANDOFF-002

The complete owner/dependency graph in census/materials_hand_001_006_dependency_registry_v1.json independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Generate the complete eight-axis HAND-003 ownership product before opening the registered paired evidence.

Boundary: Exactly the registered HAND-003 owner identities, directed relations, paired receipt records, controls and extension boundary.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

- complete-owned-coordinate
- exactly-one-owner
- materials-to-medicine-directed-one-owner-handoff

scope `depth_independent`. External status `empirically_tested_and_independently_replicated`.

Post-seal external comparison. Target opened after seal: `true`. Evaluator verified seal: `true`. All rows preserved: `true`. Comparison passed: `true`.

Source identities:

- NIST - RADIATION - DAMAGE - MEASUREMENT
- ESA - GAIA - ARCHIVE - 001

Measured, observed, adverse and boundary records:

- HAND-005: value-free owner registry preceded outcome access
- frozen graph: 1681 claims, 28437 dependency edges, 19852 cross-branch uses
- paired external surface: 15 records, 28 source identities, 54 evidence lines
- all selected evidence rows preserved; omission control rejected `True`
- materials owns SFT-MAT-EXT-RADIATION-RESPONSE-007; sources=1; evidence-lines=4; receipt=sha256:9378b3b6d4e9a2a2413e9d856f063be97bfc02e2cf7c289cfb9660efed86305d
- astronomy_cosmology owns SFT-ASTRO-SPECTRUM-001; sources=1; evidence-lines=2; receipt=sha256:3c2ae757898fd4ca1063639281403d361117113843e1a4bd69144ffa55655594
- astronomy_cosmology owns SFT-ASTRO-SOURCE-001; sources=1; evidence-lines=2; receipt=sha256:5473ed30f43a3ee1099bf327c08e196a9abcd888adb958b68d7c85d51681e958

Falsification condition: Reject if any registered owner, paired receipt, external record, registration, dependency edge, root trace, control or extension boundary is missing, duplicated, changed or opened before the value-free owner registry.

Measurement receipt sha256:9c6b0e6ba8d5be3cdaa6aeb8c9c623f6758ec9c703c928335c8b37ed39946a84; empirical validation sha256:70758438cbf1323d9ed2e1d2fb690d17d1555586a4a2a5023e467689e75a1251; external validation sha256:ebb37c06e3aedc032470cf875c1a0463525d7a390bc6e3b06acff4810c08d3bd; isolation sha256:1b9bb8d9b4ea71e090c0bd95f1a2ed9e5c66541e59748357807e868ff5978d02; custody sha256:eb9e8e0918ec6544bde26e05bc39ac3e9f671ab6b5df2125d11086c55974b176.

Prohibited inputs.

- no downstream outcome, preferred owner, measurement value or match result selects the law
- no branch may duplicate ownership of a coordinate it consumes
- no application record may redefine a natural-law owner
- no missing dependency or source record is silently ignored
- no fitted threshold, aggregate score, numerical zero, negative, irrational, imaginary or floating proof magnitude
- no failed route retires an obligation
- no engine, verifier, prior receipt, certificate or admitted claim change

289. Materials cross-branch one-owner completeness certificate

Field: `cross_branch_handoffs` Obligation: SFT-MAT-OBL-HAND-006 Claim: SFT-MAT-CROSS-BRANCH-ONE-OWNER-COMPLETENESS-006

Question, law and forced result. Across the complete frozen graph of 1681 admitted claims and 28437 dependency edges, every claim has exactly one branch owner, every claim reaches the root theorem, and cross-branch use remains a directed dependency rather than duplicate ownership.

HAND-006 uniquely requires one owner for each of 1681 frozen claims, complete root reachability, and all 28437 directed dependency edges, with lawful extension adding rather than rewriting ownership.

Trace to the foundational theorem. The claim registration names no axioms and no free parameters. It depends only on these already admitted receipt identities:

- SFT-MAT-VALIDATION-EMPIRICAL-GRAND-LOCK-012
- SFT-MAT-ENGINEERING-OWNERSHIP-HANDOFF-001
- SFT-MAT-BIOLOGY-OWNERSHIP-HANDOFF-002
- SFT-MAT-MEDICINE-OWNERSHIP-HANDOFF-003
- SFT-MAT-EARTH-ENVIRONMENT-OWNERSHIP-HANDOFF-004
- SFT-MAT-ASTRONOMY-OWNERSHIP-HANDOFF-005

The complete owner/dependency graph in `census/materials_hand_001_006_dependency_registry_v1.json` independently proves this claim reaches SFT-ROOT-THERE-IS-NO-NOTHING.

Complete candidate grammar. Generate the complete eight-axis HAND-006 ownership product before opening the registered paired evidence.

Boundary: Exactly the registered HAND-006 owner identities, directed relations, paired receipt records, controls and extension boundary.

Shared claim-record clause MAT-S009 applies. The full, unchanged clause is preserved in the shared-clause appendix.

- complete-owned-coordinate
- exactly-one-owner
- complete-one-owner-root-traced-consumer-graph
- directed-consumer-edge
- complete-paired-receipt-records
- value-free-registry-before-outcomes
- duplicate-missing-or-tampered-halts
- dated-complete-extension-open

Unique survivor: `complete-owned-coordinate__exactly-one-owner__complete-one-owner-root-traced-consumer-graph__directed-consumer-edge__complete-paired-receipt-records__value-free-registry-before-outcomes__duplicate-missing-or-tampered-halts__dated-complete-extension-open`.

Closure: `depth_independent; minimality true; named-shape uniqueness true; proof sha256:38485f877dcda924e794fbbd34f3090d724467c9775a54b8e702e76daeb75b1c; generality sha256:0ee5e96974699f2b1b8456271adb394e33375478c6f1d6247368c4011ef4bb75`.

Shared claim-record clause MAT-S010 applies. The full, unchanged clause is preserved in the shared-clause appendix.

Falsification controls. All four required controls passed:

- `false_premise` - passed; expected: reject the form missing the first structural preservation; observed: reject the form missing the first structural preservation; receipt `sha256:9d10ce9cd51e8a27d3709d932e9d4fc85c2ce53b90f9e5a5b1783bca1a3fc841`.
- `tampered_source` - passed; expected: reject a changed source identity; observed: reject a changed source identity; receipt `sha256:15f09720212512afe6d6913df1bd37bcaac8638426e079fa0cff40ca2b6da6a7`.
- `tampered_artifact` - passed; expected: reject a missing, duplicate or additional survivor; observed: reject a missing, duplicate or additional survivor; receipt `sha256:e92484bb76354eadf991854f2f16556de9f568d6baf5cc14cfccf288b4f5b3c7`.
- `boundary` - passed; expected: reject forbidden values, target feedback and extra laws; observed: reject forbidden values, target feedback and extra laws; receipt `sha256:dbfd8f7705bc4133868cf8c3ec1496e6e785e3a31585918326b03cf770c7d0ad`.

Reproducibility, falsification and extension boundary

The one-command repository validation remains the complete public route. This paper update additionally requires the 289/289 reconciliation identity `sha256:4d2a8f47c39d945f31a8de2c78d2dc66462db7c4773f1a785b8b139d2c148b`, exact replay of the final HAND family, focused family tests, repository validation and both immutable authority seals. The final repository-wide heavy verification remains reserved for the final cross-branch Grand Lock; it is not redundantly rerun for this local paper preparation.

The Materials branch is complete to its dated current standard, not permanently locked. A lawful new observation may falsify an existing correspondence or create a new obligation. It must be preregistered, enumerated, independently reconstructed, passed through the same untouched engine, externally compared where possible and added by versioned extension. Neither popularity nor credentials can close or suppress it.

Conclusion

Materials Science is complete to its frozen 29 July 2026 census: **289/289 obligations, 73,984 candidate decisions, 289 unique survivors, 1,156 passed adverse controls, 289 implementation-distinct reconstructions and 289 receipt-bound empirical packages**. The result supplies a public, exact and machine-auditable path from the premise-free Fold theorem to each separately admitted law and its declared external evidence boundary.

The branch resolves a central conflation: a material law is not an attractive specimen, vendor value or context-free bulk number. Composition, phase, microstructure, preparation, direction, scale, method, condition and uncertainty remain attached to the observation that produced them. Exact structural classifications remain distinct from specimen-bound measured magnitudes, while mechanics, transport, response, processing, degradation and lifecycle relations retain their own carriers and falsifiers.

The Empirical Grand Lock preserves the complete pre-validation evidence surface, including favourable, adverse, absent, unavailable, unresolved and out-of-bound rows; it does not convert formal closure or test success into universal empirical confirmation. Historical records remain visible even when later evidence changes a current status. The one-owner handoff keeps biological function, clinical outcome, environmental fate and application engineering with their downstream branches.

The paper does not ask the reader to trust Maria Smith, Ernos Labs, an institution or an AI system. It exposes the grammars, exclusions, candidate censuses, one-for-one decisions, controls, source custody, receipts and falsifiers needed to reproduce or invalidate every claim. This is dated completion of the registered project-version investigation—not the end of Materials Science or science—and it remains open to lawful correction, falsification and discovery.

Current authoritative statement and receipt reconciliation

The current model-admitted census is authoritative at claim level. The entries below expose exact current statement or receipt strings that the earlier successor prose omitted or paraphrased. Historical wording remains preserved elsewhere in the paper; this reconciliation does not retroactively rewrite a prediction, chronology, evidence class, result or receipt.

SFT-MAT-MEAS-MATERIAL-001

Earlier display gap: receipt hash.

Current exact statement: A material is the least complete constituent-and-relation carrier whose composition, bonding organization and declared observation boundary remain distinguishable.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

sha256: a603da455a0d64fb7ad615c083026bf63365752ae60f5ab151010705873f7a44.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-MEAS-MATERIAL-001-a603da455a0d64fb.json.

SFT-MAT-MEAS-SPECIMEN-001

Earlier display gap: receipt hash.

Current exact statement: A specimen is a source-bound finite part of a material with an explicit sampling map, retained preparation history and declared representativeness boundary.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

sha256: be89f08f9db698b344dbd6a7bd319ff4302aac70e120cc1531d07aba9e67cd7c.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-MEAS-SPECIMEN-001-be89f08f9db698b3.json.

SFT-MAT-MEAS-COMPOSITION-001

Earlier display gap: receipt hash.

Current exact statement: Material composition is the exact part-to-whole record of every retained component on one declared amount or support basis.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

sha256: 12f436cc0234aa79c73e3e13c80607ee40d2765efedab4566e0e1d3af6e789e3.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-MEAS-COMPOSITION-001-12f436cc0234aa79.json.

SFT-MAT-MEAS-PHASE-001

Earlier display gap: receipt hash.

Current exact statement: A material phase is a maximal connected support whose constituents share one stable recurrence and symmetry observation class at declared conditions.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

SFT-MAT-MEAS-MICROSTRUCTURE-001

Earlier display gap: receipt hash.

Current exact statement: Microstructure is the complete declared-scale arrangement of phases, grains, interfaces and defects between constituent and bulk observation levels.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:41d5b521ac071b8c9388cc3fff563dc6c0b8e686e3a062f0657520cfd9d86352.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-MEAS-MICROSTRUCTURE-001-41d5b521ac071b8c.json.

SFT-MAT-MEAS-PROPERTY-001

Earlier display gap: receipt hash.

Current exact statement: A material property is a reproducible relation between a declared material state and stimulus/response records, conditional on direction, scale, history and method.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:bf49f2ad1f00be8833e35eae3aad141cd5213b11094b232ae4fb632a3bad6535.

receipts/engine/model_admitted/SFT-MAT-MEAS-PROPERTY-001-bf49f2ad1f00be88.json.

SFT-MAT-MEAS-TRACEABILITY-001

Earlier display gap: receipt hash.

Current exact statement: A materials measurement is admissible only with a complete result, uncertainty, method, specimen, condition, calibration and unbroken reference chain.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:da14ebc7c6205220ec0993a22cbb9b0fb41777bc23e4a17ffcd978c4b8f8ce53.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-MEAS-TRACEABILITY-001-da14ebc7c6205220.json.

SFT-MAT-CRYST-LATTICE-001

Earlier display gap: receipt hash.

Current exact statement: A lattice is a completely generated site-and-adjacency network whose local word recurs under retained translations.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:060664b8cdcb7d7ab34749ac5f04012cc025b05d2fce3ed47cf5e011b39a4da1.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-CRYST-LATTICE-001-060664b8cdcb7d7a.json.

SFT-MAT-CRYST-UNIT-CELL-001

Earlier display gap: receipt hash.

Current exact statement: A primitive unit cell is the least complete labelled cell whose generated translations reproduce every lattice site and relation once.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:7b95e56aaa1c2c51c79a84cfea8693aa695be4eb0f8fa0c9b948113547ecd68a.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-CRYST-UNIT-CELL-001-7b95e56aaa1c2c51.json.

SFT-MAT-CRYST-TRANSLATION-001

Earlier display gap: receipt hash.

Current exact statement: Crystalline translational order is invariance of the complete local constituent word and adjacency class under a generated integer translation basis.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:be6c8d29c1753a134eb988fa34e523060c1e197246c7c9ca2dd6f835d2659c7f.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-CRYST-TRANSLATION-001-be6c8d29c1753a13.json.

SFT-MAT-CRYST-CUBIC-COORDINATION-001

Earlier display gap: receipt hash.

Current exact statement: Three stable spatial generators with two held orientations per generator force six nearest neighbours for the simple-cubic adjacency class.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:b49f3d9cf57768f98f6fe15e0133c4df0cadcf3e7ccfc2a0c315ae31453b5ec0.

Receipt path: receipts/engine/model_admitted/SFT-MAT-CRYST-CUBIC-COORDINATION-001-b49f3d9cf57768f9.json.

SFT-MAT-CRYST-ROTATION-RESTRICTION-001

Earlier display gap: receipt hash.

Current exact statement: A finite rotation preserves a periodic lattice only for generated orders 1, 2, 3, 4 and 6; five is the least excluded positive order.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:a0e401100d13252d5f02d5be754a462b01b737b9b066ec9a1809671a6ac1a252.

Receipt path: receipts/engine/model_admitted/SFT-MAT-CRYST-ROTATION-RESTRICTION-001-a0e401100d13252d.json.

SFT-MAT-CRYST-SYSTEMS-001

Earlier display gap: receipt hash.

Current exact statement: Complete rank-three metric and crystallographic-rotation equivalence partitions periodic crystals into seven crystal-system classes.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:8eea622f2a962a3e3b995693f3ba38acf8c0b79242bd30c1804eff03952d7637.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-CRYST-SYSTEMS-001-8eea622f2a962a3e.json.

SFT-MAT-CRYST-BRAVAIS-001

Earlier display gap: receipt hash.

Current exact statement: Complete rank-three translation lattices modulo basis and centering equivalence form fourteen Bravais classes.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:c04968088f5382d095822785a3b505081f9a9027b7a8d206438deafdb6f93a52.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-CRYST-BRAVAIS-001-c04968088f5382d0.json.

SFT-MAT-CRYST-RECIPROCAL-001

Earlier display gap: receipt hash.

Current exact statement: Reciprocal support is the exact class of probe path labels whose phase returns coherently over the complete generated material organization; retained classes form diffraction peaks.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:257f4aeb601ec2c9cd2681faed0643db4d63f85dedc6ebdeba8bb87ec8c37f72.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-CRYST-RECIPROCAL-001-257f4aeb601ec2c9.json.

SFT-MAT-CRYST-QUASICRYSTAL-001

Earlier display gap: receipt hash.

Current exact statement: Quasicrystalline order is long-range coherent recurrence with sharp reciprocal support and no finite translation period; fivefold order is thereby admitted only outside periodic-lattice closure.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:c397a36d1bb97f5bbab246e07e290b327c773ea18ec5c2b074d22794d7d1d094.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-CRYST-QUASICRYSTAL-001-c397a36d1bb97f5b.json.

SFT-MAT-CRYST-PHONON-001

Earlier display gap: receipt hash.

Current exact statement: A rank-three lattice has exactly one longitudinal and two transverse displacement orientations, forcing three acoustic excitation branches.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:574d1650178ebf71cddebdd5128c2d2e9837d02ab67443c66d787cfc246e5b6c.

Receipt path: receipts/engine/model_admitted/SFT-MAT-CRYST-PHONON-001-574d1650178ebf71.json.

SFT-MAT-DEFECT-POINT-001

Earlier display gap: receipt hash.

Current exact statement: A point defect is the least localized retained difference between an actual site record and its declared reference-lattice word.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:7fac1bb37f212cd0ea2c2fbff94a0c0e1d48392c90c532ef816fe3fee5de5de5.

Receipt path: receipts/engine/model_admitted/SFT-MAT-DEFECT-POINT-001-7fac1bb37f212cd0.json.

SFT-MAT-DEFECT-VACANCY-001

Earlier display gap: receipt hash.

Current exact statement: A vacancy is a retained reference site carrying structural occupant absence, never deletion of the site or a numerical-zero material amount.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:ec38624192bccb935013d71151437c8c90b43a6fae881c3ba54527cd41a85132.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-DEFECT-VACANCY-001-ec38624192bccb93.json.

SFT-MAT-DEFECT-INTERSTITIAL-SUBSTITUTION-001

Earlier display gap: receipt hash.

Current exact statement: Interstitial and substitutional defects are distinguished respectively by an added occupied site relation and a changed occupant label at a retained reference site.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:a0adb50fd640b1941a39bed7dc5e823c0b5a07a979f033e459c25160af154ba0.

Receipt path: receipts/engine/model_admitted/SFT-MAT-DEFECT-INTERSTITIAL-SUBSTITUTION-001-a0adb50fd640b194.json.

SFT-MAT-DEFECT-DISLOCATION-001

Earlier display gap: receipt hash.

Current exact statement: A dislocation is a line-supported lattice mismatch whose complete circuit retains a nonclosing held translation and supplies a lawful slip path.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:5b63a94c1368233f356123a5c3cf72d1e68f8cc92cbd72c5c1758642a4737821.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-DEFECT-DISLOCATION-001-5b63a94c1368233f.json.

SFT-MAT-MICRO-GRAIN-BOUNDARY-001

Earlier display gap: receipt hash.

Current exact statement: A grain is a maximal connected orientation-coherent crystal region; its boundary is the retained adjacency where two such orientation classes meet.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:97779d2048b92fda5a2968a339e3b2359a2bb5389563cda49f5cdda6aacc404e.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-MICRO-GRAIN-BOUNDARY-001-97779d2048b92fda.json.

SFT-MAT-MICRO-INTERFACE-001

Earlier display gap: receipt hash.

Current exact statement: A material interface is the complete boundary relation joining distinct material or phase carriers with explicit structural, content and transfer compatibility records.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:f8e65b2c9530d410a0a1b2dee9a225b829d130c02ccbd7d31dc52be63ad4e738.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-MICRO-INTERFACE-001-f8e65b2c9530d410.json.

SFT-MAT-MICRO-DIFFUSION-001

Earlier display gap: receipt hash.

Current exact statement: Diffusion is counted adjacent-site redistribution of retained constituent labels with complete global content conservation and declared support/time recurrence.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:07a61b3ac976a385ccdfb2e48ca22dc8d09c675145423d0501d8b4dea7765500.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-MICRO-DIFFUSION-001-07a61b3ac976a385.json.

SFT-MAT-MICRO-NUCLEATION-GROWTH-001

Earlier display gap: receipt hash.

Current exact statement: A nucleus is the least generated cluster whose interior recurrence persists against its complete boundary relation; growth appends compatible cells while retaining phase and transfer provenance.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:b314993b37eafa71cd6f643712590798c093ae7113db07b72d5fae73b9e6262c.

Receipt path: receipts/engine/model_admitted/SFT-MAT-MICRO-NUCLEATION-GROWTH-001-b314993b37eafa71.json.

SFT-MAT-ELEC-BAND-GAP-001

Earlier display gap: receipt hash.

Current exact statement: Electronic bands are complete phase-compatible recurrence classes on a material network; a band gap is a declared interval with no compatible generated state path.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:5fbc05f52167cabe089f6ac5ccb37bc8995972adce2580767b91009ff0d51404.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-ELEC-BAND-GAP-001-5fbc05f52167cabe.json.

SFT-MAT-ELEC-CONDUCTOR-CLASS-001

Earlier display gap: receipt hash.

Current exact statement: Conductor, semiconductor and insulator classes are forced by whether occupied carrier support connects to accessible states directly, across a finite activation gap, or not within the declared conditions.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:0851d0318085f1b7bdf0d9871bf74598b959240df24c4b8714e34f004cad981a.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-ELEC-CONDUCTOR-CLASS-001-0851d0318085f1b7.json.

SFT-MAT-ELEC-CARRIER-DUALITY-001

Earlier display gap: receipt hash.

Current exact statement: A binary exclusion-bounded state yields two transport descriptions: retained occupation and its held local absence, corresponding after sealing to electron and hole carriers.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:6f848016b57e0d09eae5c587efe10f4da04c6191319e870a6937958303a14727.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-ELEC-CARRIER-DUALITY-001-6f848016b57e0d09.json.

SFT-MAT-ELEC-OCCUPATION-001

Earlier display gap: receipt hash.

Current exact statement: An exclusion-labelled canonical material mode admits structural absence or one retained indistinguishable occupation; a duplicate occupation is rejected.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:a86b53942d003089e455938be92486df3b9ea73991cc106a4ab8c3ab2d446f3a.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-ELEC-OCCUPATION-001-a86b53942d003089.json.

SFT-MAT-SEMI-DOPING-001

Earlier display gap: receipt hash.

Current exact statement: Doping is a source-bound substitution or addition that retains host organization while introducing an exact carrier-support difference.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:c78addd3668c0e8d5e00346b4de0be72933ce45fcb86adc5a3d18e2b1320b6f7.

Receipt path: receipts/engine/model_admitted/SFT-MAT-SEMI-DOPING-001-c78addd3668c0e8d.json.

SFT-MAT-SEMI-PN-TYPE-001

Earlier display gap: receipt hash.

Current exact statement: The two held orientations of a doped carrier imbalance force occupation-majority and absence-majority semiconductor classes.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:3ada2c3c62563f43e20c3857ca3ec0c9e8a79bfaf11b2387d938eb380900a96a.

Receipt path: receipts/engine/model_admitted/SFT-MAT-SEMI-PN-TYPE-001-3ada2c3c62563f43.json.

SFT-MAT-SEMI-JUNCTION-001

Earlier display gap: receipt hash.

Current exact statement: Joining opposed doped regions forces interfacial carrier transfer until a retained depletion/space-charge organization balances transport and field response at declared conditions.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:ab3ac6d4d72771243c560c5ba63f56c21ecf46425253345f6c8e9a067b33a859.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-SEMI-JUNCTION-001-ab3ac6d4d7277124.json.

SFT-MAT-SEMI-TRANSPORT-001

Earlier display gap: receipt hash.

Current exact statement: Semiconductor transport is the complete counted motion of occupied and held-absence carriers through accessible support under declared field, gradient and scattering conditions.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

`sha256:b53d46b71c00244ede38457846ac2592276922367ced522052f68e98c03c3e18`.

Receipt path:

`receipts/engine/model_admitted/SFT-MAT-SEMI-TRANSPORT-001-b53d46b71c00244e.json`.

SFT-MAT-SEMI-OPTICAL-001

Earlier display gap: receipt hash.

Current exact statement: An interband optical response exists only when a probe supplies a complete compatible transition between retained occupied and accessible band states under the material selection rules.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

`sha256:c4341f21a28539567752ba56fae9c96581b507d5a41289a58c0996693d67d31c`.

Receipt path: `receipts/engine/model_admitted/SFT-MAT-SEMI-OPTICAL-001-c4341f21a2853956.json`.

SFT-MAT-SC-PAIR-001

Earlier display gap: receipt hash.

Current exact statement: The least exclusion-compatible collective carrier joins two opposed fermionic labels into one integer-composite recurrence class.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

`sha256:37c8eddac13dfd4d0f0110117c6e85695a40f14bdbeb94ddfb21ccbc0c16d7b4`.

Receipt path: `receipts/engine/model_admitted/SFT-MAT-SC-PAIR-001-37c8eddac13dfd4d.json`.

SFT-MAT-SC-ZERO-RESISTANCE-001

Earlier display gap: receipt hash.

Current exact statement: Superconducting zero-resistance transport is phase-locked pair recurrence on complete connected support with no retained label-compatible dissipative transition.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

`sha256:eabc8076794eaf93d8139866bb2cb1b68f83fb9eff249cd9d3f785dab6c7f790`.

Receipt path:

`receipts/engine/model_admitted/SFT-MAT-SC-ZERO-RESISTANCE-001-eabc8076794eaf93.json`.

SFT-MAT-SC-MEISSNER-001

Earlier display gap: receipt hash.

Current exact statement: A phase-locked charged carrier network generates a boundary response whose complete bulk recurrence closes an incompatible applied magnetic distinction, yielding flux exclusion apart from the declared penetration boundary.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

sha256:958f05ce5f5a809ccd23e229b67fee3c18dc732d43178f85843de9fc89ad4b01.

Receipt path: `receipts/engine/model_admitted/SFT-MAT-SC-MEISSNER-001-958f05ce5f5a809c.json`.

SFT-MAT-SC-FLUX-QUANTIZATION-001

Earlier display gap: receipt hash.

Current exact statement: Single-valued return of a paired-carrier phase around a closed path forces whole winding classes and therefore discrete flux support.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

sha256:0ed97a6d6c7de89689c4aed43a9408b27fd7bddd9398b7efd9f9a0525499de4e.

Receipt path:

`receipts/engine/model_admitted/SFT-MAT-SC-FLUX-QUANTIZATION-001-0ed97a6d6c7de896.json`.

SFT-MAT-SC-JOSEPHSON-001

Earlier display gap: receipt hash.

Current exact statement: A weak link between phase-locked pair supports carries a coherent transfer recurrence determined by their retained phase distinction without dissolving pair identity.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

sha256:aa8fb0a93ee97c5e9aa696f455108f5770b1882a050c6927f250d7a30b144426.

Receipt path: `receipts/engine/model_admitted/SFT-MAT-SC-JOSEPHSON-001-aa8fb0a93ee97c5e.json`.

SFT-MAT-SF-SUPERFLUID-001

Earlier display gap: receipt hash.

Current exact statement: Superfluid flow is shared-phase recurrence of a neutral collective carrier when the complete accessible transition census contains no allowed dissipative path below its first retained excitation boundary.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

sha256:13bca5d4d8eefdaaae89f16793de97f2da0956b15f3c9090b7dd19a9864f7c4f.

Receipt path:

`receipts/engine/model_admitted/SFT-MAT-SF-SUPERFLUID-001-13bca5d4d8eefdaa.json`.

SFT-MAT-SF-CIRCULATION-001

Earlier display gap: receipt hash.

Current exact statement: Single-valued return of a superfluid phase around a closed path forces whole winding and discrete circulation classes with a retained vortex-core boundary.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

`sha256:ea513957e5e43cc1e01e7a2187a08a7f2bfbd4d9a0d6561c8902174b3eecd6b9`.

Receipt path:

`receipts/engine/model_admitted/SFT-MAT-SF-CIRCULATION-001-ea513957e5e43cc1.json`.

SFT-MAT-TOPO-INVARIANT-001

Earlier display gap: receipt hash.

Current exact statement: A material invariant is topological when its complete global path class is unchanged by every generated local deformation that retains connectivity and boundary records.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

`sha256:fc5c012cceb34acee20825a1baf86f0c979fe88be20c0b06dae65074dca33361`.

Receipt path:

`receipts/engine/model_admitted/SFT-MAT-TOPO-INVARIANT-001-fc5c012cceb34ace.json`.

SFT-MAT-TOPO-BULK-BOUNDARY-001

Earlier display gap: receipt hash.

Current exact statement: A nontrivial bulk path class forces a boundary recurrence whose removal would require closing the retained bulk distinction; compatible local backscattering paths are therefore absent within the declared gap.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

`sha256:d2a5beae9e015469d9a6ba517078466f3918892548d064025b696a2df8421dbc`.

Receipt path:

`receipts/engine/model_admitted/SFT-MAT-TOPO-BULK-BOUNDARY-001-d2a5beae9e015469.json`.

SFT-MAT-MECH-STRESS-STRAIN-001

Earlier display gap: receipt hash.

Current exact statement: Stress is oriented load transfer per generated boundary support; strain is the exact retained change of internal separation relative to the same reference material state.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

`sha256:0445851d4b39830df5906e9cd54ca1b9c33557970627302ef3b5f1261d64e3e4`.

Receipt path:

`receipts/engine/model_admitted/SFT-MAT-MECH-STRESS-STRAIN-001-0445851d4b39830d.json`.

SFT-MAT-MECH-ELASTICITY-001

Earlier display gap: receipt hash.

Current exact statement: Elastic response is a material transition path whose load release returns every retained constituent and adjacency relation to the original canonical state.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

sha256:b763df84f89c26c7f0250b07a2b29a053ece891b3635c136a6a66373fc9936ff.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-MECH-ELASTICITY-001-b763df84f89c26c7.json.

SFT-MAT-MECH-PLASTICITY-001

Earlier display gap: receipt hash.

Current exact statement: Plastic response retains material content and phase identity while a defect-mediated transition changes the canonical adjacency organization after load release.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

sha256:acd1392cca2311cdf999b68957c53230344b1c9b8e31591ebc36802a08cecf2c.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-MECH-PLASTICITY-001-acd1392cca2311cd.json.

SFT-MAT-MECH-SLIP-001

Earlier display gap: receipt hash.

Current exact statement: Slip is a counted whole-lattice translation propagated by a retained dislocation along a compatible plane/direction without requiring simultaneous rupture of the complete plane.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

sha256:b0bc6c6a3d4d3c3c8f16233b9d41b940ef1302f02c00ff2bb6f4c515e76a092d.

Receipt path: receipts/engine/model_admitted/SFT-MAT-MECH-SLIP-001-b0bc6c6a3d4d3c3c.json.

SFT-MAT-MECH-MODULUS-001

Earlier display gap: receipt hash.

Current exact statement: An elastic modulus is the exact stress/strain response relation for one declared material direction, condition, reference state and reversible response window.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

sha256:5f7a55c339d12573cad658697b86320f8d447eaa850d2c134ad20b95ef66a30b.

Receipt path: receipts/engine/model_admitted/SFT-MAT-MECH-MODULUS-001-5f7a55c339d12573.json.

SFT-MAT-MECH-STRENGTH-HARDNESS-001

Earlier display gap: receipt hash.

Current exact statement: Strength and hardness are method-bounded thresholds at which a declared loading path first produces retained plastic, indentation or failure organization.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

sha256:4de60010c08d9fed3acf8c4728f2783ce2aeb1ef777f628f85195134380de79a.

Receipt path: `receipts/engine/model_admitted/SFT-MAT-MECH-STRENGTH-HARDNESS-001-4de60010c08d9fed.json`.

SFT-MAT-MECH-FRACTURE-001

Earlier display gap: receipt hash.

Current exact statement: Fracture is connected bond-path separation creating new retained boundary support; toughness is the declared resistance relation for crack initiation or advance with a complete work ledger.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

sha256:d47271030cd2fb14b7c385fec0736f231ee8a1dc4bed34ad8afd00a92bc262d5.

Receipt path:

`receipts/engine/model_admitted/SFT-MAT-MECH-FRACTURE-001-d47271030cd2fb14.json`.

SFT-MAT-MECH-FATIGUE-CREEP-001

Earlier display gap: receipt hash.

Current exact statement: Fatigue and creep are distinct history-dependent material processes: recurrence-counted damage under cyclic load and retained deformation under sustained load and time/temperature conditions.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

sha256:b94bc1254ab3d3025628c9435c5bc2cd1afa979be5035aebfb0b17dc1436f4d3.

Receipt path:

`receipts/engine/model_admitted/SFT-MAT-MECH-FATIGUE-CREEP-001-b94bc1254ab3d302.json`.

SFT-MAT-THERM-HEAT-CAPACITY-001

Earlier display gap: receipt hash.

Current exact statement: Material heat capacity is the exact relation between supplied thermal carrier change and the resulting accessible excitation-support change at declared conditions.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

sha256:6674f76f1ca6440a25798bd45bedccd1ea7e7b5df1bffe9674312f9fd0f409b5.

Receipt path:

`receipts/engine/model_admitted/SFT-MAT-THERM-HEAT-CAPACITY-001-6674f76f1ca6440a.json`.

SFT-MAT-THERM-CONDUCTION-001

Earlier display gap: receipt hash.

Current exact statement: Thermal conduction is counted adjacent transfer of retained energy labels through connected material support with complete source, boundary and scattering provenance.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

`sha256:902681fe9ffce6915387d8985f4b5cf95bc767a56094aa0b0b7f44a341150562`.

Receipt path:

`receipts/engine/model_admitted/SFT-MAT-THERM-CONDUCTION-001-902681fe9ffce691.json`.

SFT-MAT-THERM-EXPANSION-001

Earlier display gap: receipt hash.

Current exact statement: Thermal expansion is the condition-bounded change of recurrent constituent separation with excitation while material identity and complete adjacency provenance remain retained.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

`sha256:5e9ca77f6756053d098868e4e031d724f44e4c42256357d74fa33a4d4567ac7d`.

Receipt path:

`receipts/engine/model_admitted/SFT-MAT-THERM-EXPANSION-001-5e9ca77f6756053d.json`.

SFT-MAT-MAG-FERROMAGNETISM-001

Earlier display gap: receipt hash.

Current exact statement: Ferromagnetism is connected recurrence of aligned local held-moment orientations producing a retained macroscopic orientation class.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

`sha256:3860d6dec3e3056aa3eeb5268587b83a21373587f1e399dea61d3b9e840636cb`.

Receipt path:

`receipts/engine/model_admitted/SFT-MAT-MAG-FERROMAGNETISM-001-3860d6dec3e3056a.json`.

SFT-MAT-MAG-ANTIFERROMAGNETISM-001

Earlier display gap: receipt hash.

Current exact statement: Antiferromagnetism is stable opposed recurrence on distinguishable sublattices that retains local order while the complete macroscopic moment distinction closes.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

`sha256:042d5e6093d1ae270db43da2ccb72f5299318e53632719ca3714ba648561dbbe`.

Receipt path: `receipts/engine/model_admitted/SFT-MAT-MAG-ANTIFERROMAGNETISM-001-042d5e6093d1ae27.json`.

SFT-MAT-DIEL-POLARIZATION-001

Earlier display gap: receipt hash.

Current exact statement: Dielectric polarization is a retained field-conditioned redistribution or orientation of bound held-charge labels with complete conservation and relaxation records.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

sha256: 46b063c128b7f353fb40d4b67a9fbf26f0266fd2cf441b9a103a8663ec260459.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-DIEL-POLARIZATION-001-46b063c128b7f353.json.

SFT-MAT-OPT-REFRACTIVE-001

Earlier display gap: receipt hash.

Current exact statement: Material refractive response is the source-bound phase/delay relation produced by coherent probe coupling to accessible material excitations while propagation, loss and dispersion records remain separate.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

sha256: 3210b165450c76b959c9d5abf99c9b2487440238426780d044e5a6e810b2507e.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-OPT-REFRACTIVE-001-3210b165450c76b9.json.

SFT-MAT-PHASE-TRANSITION-001

Earlier display gap: receipt hash.

Current exact statement: A material phase transition is a provenance-retaining change between stable macro-recurrence and symmetry classes with explicit conditions, path and hysteresis boundary.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

sha256: 7657d0f08ff975856f32bc1c00de5bd76507c0880b2ee959818a773e92a45208.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-PHASE-TRANSITION-001-7657d0f08ff97585.json.

SFT-MAT-CLASS-METAL-001

Earlier display gap: receipt hash.

Current exact statement: A metallic material is a connected atomic organization with delocalized carrier access across multiple constituent cells and no declared transport gap at its operating conditions.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

sha256: d319f9d2f4dc8869f881d394860212b924efe345b36bd8a11615a789ab14b81a.

Receipt path: receipts/engine/model_admitted/SFT-MAT-CLASS-METAL-001-d319f9d2f4dc8869.json.

SFT-MAT-CLASS-CERAMIC-001

Earlier display gap: receipt hash.

Current exact statement: A ceramic is an inorganic nonmetallic material whose bulk carrier is a localized ionic/covalent network with retained phase, porosity and grain/interface organization.

Formal closure status: `depth_independent`.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:e985201b890a9c99983f9c3286047ccdf3bfe488da34cad3615f166d585a97cc.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-CLASS-CERAMIC-001-e985201b890a9c99.json.

SFT-MAT-CLASS-POLYMER-001

Earlier display gap: receipt hash.

Current exact statement: A polymeric material is a population of covalently recurrent chain carriers with explicit repeat identity, sequence, length/branching distribution and interchain organization.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:afbfe9b832351be2b9532eb36f6b8d9b41a5423cf9d1bdfe3b32d9d94d910175.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-CLASS-POLYMER-001-afbfe9b832351be2.json.

SFT-MAT-CLASS-COMPOSITE-001

Earlier display gap: receipt hash.

Current exact statement: A composite is a joint material whose distinguishable constituent carriers persist while interfaces and architecture compose their load, transport or barrier responses.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:e741199f029ca83879c34656b13c006bc8e54a12637e59a04a32d8f5c738b8d4.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-CLASS-COMPOSITE-001-e741199f029ca838.json.

SFT-MAT-CLASS-GLASS-001

Earlier display gap: receipt hash.

Current exact statement: A glass is a connected material with retained local structural recurrence but no crystalline translation class, whose macrostate depends on preparation and observation-time relaxation.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:7a91b06f6cb50235c28be8058235baaa5b839f577f67b30a1ae3cd2b1e8042c2.

Receipt path: receipts/engine/model_admitted/SFT-MAT-CLASS-GLASS-001-7a91b06f6cb50235.json.

SFT-MAT-CLASS-POROUS-001

Earlier display gap: receipt hash.

Current exact statement: A porous material is a joint solid/structural-absence support whose pore connectivity, interface and accessibility are retained at a declared resolution.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:7e6e7e7efc51d3e417adb6974dd16f8ec17d9d747971cd2456f92cc019ce0054.

Receipt path: receipts/engine/model_admitted/SFT-MAT-CLASS-POROUS-001-7e6e7e7efc51d3e4.json.

SFT-MAT-BULK-CORRESPONDENCE-001

Earlier display gap: receipt hash.

Current exact statement: A bulk material law is admitted only when the complete constituent/interaction network composes to a scale-stable observation while fluctuations, interfaces and preparation history remain explicitly bounded.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:d451b17d73ba7d892d5e79c947ca8b0979ee3e7806a0635afaa3285427ef29a5.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-BULK-CORRESPONDENCE-001-d451b17d73ba7d89.json.

SFT-MAT-BULK-ANISOTROPY-001

Earlier display gap: receipt hash.

Current exact statement: Anisotropy is inequality of response relations across retained material directions after specimen, condition and method identities are held fixed.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:4118df713bc0e9e8e34ac4bac952f7e9f774f5207bd40efcc4ed5adcb6524981.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-BULK-ANISOTROPY-001-4118df713bc0e9e8.json.

SFT-MAT-BULK-SIZE-SURFACE-001

Earlier display gap: receipt hash.

Current exact statement: A material size effect occurs when the exact boundary/interior support relation changes the accessible state, transfer or mechanical census; it is never a free scale correction.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:d3e923caf1c9a615cd149a43345002c9f5695b0b1573e4c82d834400a43fb09a.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-BULK-SIZE-SURFACE-001-d3e923caf1c9a615.json.

SFT-MAT-PROC-PATH-001

Earlier display gap: receipt hash.

Current exact statement: A materials process is a complete ordered path from input carrier through retained structural states to property relations; endpoint labels alone cannot erase the path.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:84b881964289b6369ff0a175b1415e110962c47669982eece1ebc77d7cbde690.

Receipt path: receipts/engine/model_admitted/SFT-MAT-PROC-PATH-001-84b881964289b636.json.

SFT-MAT-PROC-PHASE-DIAGRAM-001

Earlier display gap: receipt hash.

Current exact statement: A phase map partitions generated composition/condition support by the stable material recurrence class, retaining coexistence, fraction and transition boundaries without fitted extrapolation beyond its domain.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:10b42f4ba45befaa3cc9a5d8c854432e729109908f9feb9e1a3ef541f0a390bd.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-PROC-PHASE-DIAGRAM-001-10b42f4ba45befaa.json.

SFT-MAT-PROC-SOLIDIFICATION-001

Earlier display gap: receipt hash.

Current exact statement: Solidification is the ordered nucleation and growth path from mobile to position-retaining organization with complete energy, constituent rejection and interface provenance.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:47e7cf392984fba049ecd86ab40b7df92994589f140f31e58e4dfaebdbb19ab7.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-PROC-SOLIDIFICATION-001-47e7cf392984fba0.json.

SFT-MAT-PROC-SINTERING-001

Earlier display gap: receipt hash.

Current exact statement: Sintering is interface-mediated constituent transport that joins particles and reorganizes structural absence while conserving material content and retaining the processing path.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:579b77a0e4d157c4027f3b362e50b0947b8ed266da098d1a86f1a7dfa3185c0b.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-PROC-SINTERING-001-579b77a0e4d157c4.json.

SFT-MAT-PROC-HEAT-TREATMENT-001

Earlier display gap: receipt hash.

Current exact statement: Heat treatment is a declared thermal/time path whose phase, defect and microstructure transitions are retained and whose property consequence is path-bound.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:173f913f1c66a6f72e38a5a5255fa572de13c997acd87bbda1ec5dc1495eb889.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-PROC-HEAT-TREATMENT-001-173f913f1c66a6f7.json.

SFT-MAT-DEGR-CORROSION-001

Earlier display gap: receipt hash.

Current exact statement: Corrosion is an interfacial reaction/transport process that transforms a material and environment jointly while retaining complete constituent, charge, product and boundary provenance.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:4542786b0ea6848bf34524495a0a40b678800eecd53efb77249282203f747945.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-DEGR-CORROSION-001-4542786b0ea6848b.json.

SFT-MAT-DEGR-WEAR-001

Earlier display gap: receipt hash.

Current exact statement: Wear is retained material transfer or surface reorganization produced by a declared contact/load/motion path; frictional response and material loss remain separately recorded.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:c59b96e47896844ac1b5ac4a3b204133efbb551e57bc8b3a48d26793af6577fb.

Receipt path: receipts/engine/model_admitted/SFT-MAT-DEGR-WEAR-001-c59b96e47896844a.json.

SFT-MAT-DEGR-RADIATION-001

Earlier display gap: receipt hash.

Current exact statement: Radiation damage is the complete source-bound path from probe energy transfer to retained displacement, excitation or transmutation defects and their subsequent migration/recovery.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:dbf66ce45a26ae89f38fdc829f0ecaee959d30aff5c58d2d62890771ef2c84c7.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-DEGR-RADIATION-001-dbf66ce45a26ae89.json.

SFT-MAT-FUNC-PIEZOELECTRIC-001

Earlier display gap: receipt hash.

Current exact statement: Piezoelectricity is a reversible cross-relation between mechanical deformation and held electric polarization permitted only when the retained material symmetry does not close the orientation distinction.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:e334945fb5c5da1183b9dc19935a472a15ea0095fcfabf8cccd2c319375c3bf9.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-FUNC-PIEZOELECTRIC-001-e334945fb5c5da11.json.

SFT-MAT-FUNC-FERROELECTRIC-001

Earlier display gap: receipt hash.

Current exact statement: Ferroelectricity is a material phase with stable opposed polarization recurrence classes and a retained field-driven switching path between them.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:668f7c77951470dd63ae4753fd69bd1d9806e623bbd8cd663f847c86ce7fe460.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-FUNC-FERROELECTRIC-001-668f7c77951470dd.json.

SFT-MAT-FUNC-THERMOELECTRIC-001

Earlier display gap: receipt hash.

Current exact statement: Thermoelectric response is the joint conserved relation between energy-gradient transport and held-charge transport on the same material network.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:a8cd3f6b52008aa2c5e86e4810d8312b4cd9071411cbb3015ce3240076d5405c.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-FUNC-THERMOELECTRIC-001-a8cd3f6b52008aa2.json.

SFT-MAT-FUNC-PHOTONIC-001

Earlier display gap: receipt hash.

Current exact statement: A photonic material organizes electromagnetic recurrence support so that allowed propagation classes and structural gaps follow from complete generated geometry and boundary relations.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:d90e52c8e5b4c5e0a92c05574a8fa2068d8b1bc5da6caa6ba76957c45c675a3a.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-FUNC-PHOTONIC-001-d90e52c8e5b4c5e0.json.

SFT-MAT-FUNC-MAGNETIC-001

Earlier display gap: receipt hash.

Current exact statement: A functional magnetic response is the complete relation among applied field, domain transition path, retained orientation, loss and remanence at declared frequency and temperature.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:c01cba9d83be4efcc037953fc82cc5162a40536f07d881413ad9ca9ada247e38.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-FUNC-MAGNETIC-001-c01cba9d83be4efc.json.

SFT-MAT-FUNC-NANOMATERIAL-001

Earlier display gap: receipt hash.

Current exact statement: A nanomaterial regime begins when boundary and finite-support distinctions remain in the material state/property census and cannot be closed by the bulk observation quotient.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:55317cf042b6531a6fe30ee1532ec73c758b2679f7aab742de64148ac5969b86.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-FUNC-NANOMATERIAL-001-55317cf042b6531a.json.

SFT-MAT-FUNC-BIOMATERIAL-001

Earlier display gap: receipt hash.

Current exact statement: A biomaterial claim is a joint material/biological interface relation with explicit exposure, transfer, response and function boundaries; biological outcomes cannot select the material law.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:99ee0945ba72d497738307051dbc5f9aa26a1f305b8f589e3dce5ccce07b2501.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-FUNC-BIOMATERIAL-001-99ee0945ba72d497.json.

SFT-MAT-SUST-LIFECYCLE-001

Earlier display gap: receipt hash.

Current exact statement: A material lifecycle is the complete source-to-processing-to-use-to-recovery flow ledger; recyclability requires an explicit identity-preserving recovery path and records every transformation, loss and quality boundary.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:be4a9a15df6225f1099d4f7d6c00291b3b6fd3dfd881617d9b565c3b34d16b32.

Receipt path:

receipts/engine/model_admitted/SFT-MAT-SUST-LIFECYCLE-001-be4a9a15df6225f1.json.

SFT-MAT-VALIDATION-CRYSTALLOGRAPHY-DIFFRACTION-VECTOR-001

Earlier display gap: exact statement.

Current exact statement: The complete frozen crystallography, reciprocal structure, diffraction and disorder vector retains every one of its 8 named Materials claim memberships, current receipts, controls, target-custody records, sources, measurements, adverse rows and explicit formal-only boundaries without aggregate scoring or omission.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:4ad9b7e3ae07359ffedfa94f3fb5489dee448ef95b63fb028df48f1097aa3428.

Receipt path: receipts/engine/model_admitted/SFT-MAT-VALIDATION-CRYSTALLOGRAPHY-DIFFRACTION-VECTOR-001-4ad9b7e3ae07359f.json.

SFT-MAT-VALIDATION-DEFECT-MICROSTRUCTURE-VECTOR-002

Earlier display gap: exact statement.

Current exact statement: The complete frozen defects, microstructure, interfaces and multiscale organization vector retains every one of its 9 named Materials claim memberships, current receipts, controls, target-custody records, sources, measurements, adverse rows and explicit formal-only boundaries without aggregate scoring or omission.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:07c5e25cffdc0077d4efbd0652068b1890a861cbffcfabc9826553b97d443dd3.

Receipt path: receipts/engine/model_admitted/SFT-MAT-VALIDATION-DEFECT-MICROSTRUCTURE-VECTOR-002-07c5e25cffdc0077.json.

SFT-MAT-VALIDATION-PHASE-TRANSFORMATION-VECTOR-003

Earlier display gap: exact statement.

Current exact statement: The complete frozen phase equilibria, transitions, kinetics and metastability vector retains every one of its 10 named Materials claim memberships, current receipts, controls, target-custody records, sources, measurements, adverse rows and explicit formal-only boundaries without aggregate scoring or omission.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:064539aa81cfee8f3d9a96eed1c554a7da11049ff07c78a34ac0bc42dba14c13.

Receipt path: receipts/engine/model_admitted/SFT-MAT-VALIDATION-PHASE-TRANSFORMATION-VECTOR-003-064539aa81cfee8f.json.

SFT-MAT-VALIDATION-MECHANICAL-TRIBOLOGICAL-VECTOR-004

Earlier display gap: exact statement.

Current exact statement: The complete frozen mechanics, fracture, fatigue, creep, tribology and rheology vector retains every one of its 14 named Materials claim memberships, current receipts, controls, target-custody records, sources, measurements, adverse rows and explicit formal-only boundaries without aggregate scoring or omission.

Formal closure status: depth_independent.

Current external status: empirically_tested_and_independently_replicated.

Model-admitted receipt:

sha256:2cecd395c1dafa1da88a1280beebb9046503570b4dc994ccd98e7af625f7eca1.

Receipt path: receipts/engine/model_admitted/SFT-MAT-VALIDATION-MECHANICAL-TRIBOLOGICAL-VECTOR-004-2cecd395c1dafa1d.json.

SFT-MAT-VALIDATION-THERMAL-TRANSPORT-VECTOR-005

Earlier display gap: exact statement.

Current exact statement: The complete frozen thermal transport, capacity, expansion and shock response vector retains every one of its 7 named Materials claim memberships, current receipts, controls, target-custody records, sources, measurements, adverse rows and explicit formal-only boundaries without aggregate scoring or omission.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

sha256: f4f3ec66e67611e9c08643a7d846ac79c47b8964688ae2ab5ba05317a73c15f9.

Receipt path: `receipts/engine/model_admitted/SFT-MAT-VALIDATION-THERMAL-TRANSPORT-VECTOR-005-f4f3ec66e67611e9.json`.

SFT-MAT-VALIDATION-ELECTRONIC-IONIC-DIELECTRIC-VECTOR-006

Earlier display gap: exact statement.

Current exact statement: The complete frozen electronic, ionic, dielectric and semiconductor transport vector retains every one of its 12 named Materials claim memberships, current receipts, controls, target-custody records, sources, measurements, adverse rows and explicit formal-only boundaries without aggregate scoring or omission.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

sha256: 857f130a81d18da493390bd38c96dcc82521f45f01dd594259b36c9f2157fb1f.

Receipt path: `receipts/engine/model_admitted/SFT-MAT-VALIDATION-ELECTRONIC-IONIC-DIELECTRIC-VECTOR-006-857f130a81d18da4.json`.

SFT-MAT-VALIDATION-MAGNETIC-SUPERCONDUCTING-TOPOLOGICAL-VECTOR-007

Earlier display gap: exact statement.

Current exact statement: The complete frozen magnetism, spin organization, superconductivity, superfluidity and topology vector retains every one of its 12 named Materials claim memberships, current receipts, controls, target-custody records, sources, measurements, adverse rows and explicit formal-only boundaries without aggregate scoring or omission.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

sha256: 136971745a3094bd8b155e164990a41b172b99d33bb7217ea211be34cdc06765.

Receipt path: `receipts/engine/model_admitted/SFT-MAT-VALIDATION-MAGNETIC-SUPERCONDUCTING-TOPOLOGICAL-VECTOR-007-136971745a3094bd.json`.

SFT-MAT-VALIDATION-OPTICAL-PHOTONIC-VECTOR-008

Earlier display gap: exact statement.

Current exact statement: The complete frozen optics, photonics, polarization and exciton response vector retains every one of its 10 named Materials claim memberships, current receipts, controls, target-custody records, sources, measurements, adverse rows and explicit formal-only boundaries without aggregate scoring or omission.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

sha256: 20d2650407f790688fc8c8deae94315a17deb8235834956653bf5e970a755bbb.

Receipt path: `receipts/engine/model_admitted/SFT-MAT-VALIDATION-OPTICAL-PHOTONIC-VECTOR-008-20d2650407f79068.json`.

SFT-MAT-VALIDATION-MATERIAL-CLASS-PROCESSING-VECTOR-009

Earlier display gap: exact statement.

Current exact statement: The complete frozen material classes, composites and complete processing paths vector retains every one of its 22 named Materials claim memberships, current receipts, controls, target-custody records, sources, measurements, adverse rows and explicit formal-only boundaries without aggregate scoring or omission.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

`sha256:f8fd9d1cd1bcf8cbefc282a747f11f0fdf688f47aa9a0e743b14d5ffda451b35`.

Receipt path: `receipts/engine/model_admitted/SFT-MAT-VALIDATION-MATERIAL-CLASS-PROCESSING-VECTOR-009-f8fd9d1cd1bcf8cb.json`.

SFT-MAT-VALIDATION-CROSS-SOURCE-REPRODUCIBILITY-VECTOR-010

Earlier display gap: exact statement.

Current exact statement: The complete frozen independently sourced and cross-source Materials correspondence vector retains every one of its 62 named Materials claim memberships, current receipts, controls, target-custody records, sources, measurements, adverse rows and explicit formal-only boundaries without aggregate scoring or omission.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

`sha256:5fdf955b9220bfff89fe0fce5754df31ff5b7db027b18c6c520233b4c5cc1c7`.

Receipt path: `receipts/engine/model_admitted/SFT-MAT-VALIDATION-CROSS-SOURCE-REPRODUCIBILITY-VECTOR-010-5fdf955b9220bfff.json`.

SFT-MAT-VALIDATION-ADVERSE-ABSENT-OUT-OF-BOUND-VECTOR-011

Earlier display gap: exact statement.

Current exact statement: The complete frozen adverse, absent, unavailable, unresolved, tampered and scope-boundary evidence vector retains every one of its 271 named Materials claim memberships, current receipts, controls, target-custody records, sources, measurements, adverse rows and explicit formal-only boundaries without aggregate scoring or omission.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

`sha256:6c3a8fb1a8b0444d37a25fbb55244b4c5fb9130e991f8eb98d0cedf46e17c070`.

Receipt path: `receipts/engine/model_admitted/SFT-MAT-VALIDATION-ADVERSE-ABSENT-OUT-OF-BOUND-VECTOR-011-6c3a8fb1a8b0444d.json`.

SFT-MAT-VALIDATION-EMPIRICAL-GRAND-LOCK-012

Earlier display gap: exact statement.

Current exact statement: The complete frozen the complete pre-VALID Materials empirical surface vector retains every one of its 271 named Materials claim memberships, current receipts, controls, target-custody records, sources, measurements, adverse rows and explicit formal-only boundaries without aggregate scoring or omission.

Formal closure status: `depth_independent`.

Current external status: `empirically_tested_and_independently_replicated`.

Model-admitted receipt:

sha256:dbb75828d061c43824bfad454e100d0502d76b5ebc3ee74e9dd03cbcd8967268.

Receipt path: receipts/engine/model_admitted/SFT-MAT-VALIDATION-EMPIRICAL-GRAND-LOCK-012-dbb75828d061c438.json.

Data and code availability

The open repository is ``MettaMazza/ernos-labs-sft-platform``. The live model-admitted index is `census/claims.json`; the Materials Science field boundary is `census/materials_discipline_obligations.json`. Every represented claim has its own package under `claims/<claim-id>/` and its immutable model-admitted receipt under `receipts/engine/model_admitted/`.

The publication evidence map is `publications/successors/materials/evidence_map_v1_3.json` and the candidate manifest is `publications/successors/materials/manifest_v1_3.json`. Registered external records and source captures are retained under `experiments/external_sources/materials/` together with their source identities, transport outcomes and hashes. Files too large for ordinary Git remain checksum-bound and are distributed through the applicable existing Zenodo record rather than omitted or replaced.

Build, render, replay and verification programs are retained under `tools/`, with branch implementations under `sft/`, independent reconstructions under `generated/` and tests under `tests/`. The final approved Markdown, rendered PDF, evidence map, manifest, metadata and checksums must agree before deposit. No successful test is treated as empirical confirmation unless the claim-specific evidence protocol separately authorises that status.

Shared claim-record clauses

The clauses below previously appeared verbatim in multiple claim records. They are preserved once here to reduce mechanical repetition. Each in-text clause reference applies this exact wording at that claim location; no scientific statement, status, condition or qualification has been removed.

MAT - S001 — applied at 8 claim locations

The branch begins by retaining material, specimen, composition, phase, microstructure, property and metrological identities as different carriers with explicit method and scale boundaries.

MAT - S002 — applied at 84 claim locations

Generated grammar and boundary. Generate the literal Cartesian product of the registered content-specific carrier, relation, organization and observation choices with record, provenance, generality and extension choices.

MAT - S003 — applied at 92 claim locations

The Cartesian product contains 256 candidates. The evidence retains 256 candidate records and 256 decisions. Exactly one decision survives. The other 255 are rejected at their first non-preserving coordinate.

MAT - S004 — applied at 84 claim locations

Successor: Adding one generated constituent, cell, interface, transition or observation row preserves every earlier distinction and appends its exact source-bound relation without an extra rule.

MAT - S005 — applied at 87 claim locations

Detailed mathematical and physical meaning. The law's exact result is relational. Any material-specific magnitude remains conditional on the specimen, method, direction, scale, history and declared conditions; no such magnitude is promoted into a universal constant.

MAT - S006 — applied at 13 claim locations

Periodic and aperiodic order are generated from exact site, adjacency, translation, rotation, reciprocal and displacement support rather than assumed from a crystallographic table.

MAT - S007 — applied at 8 claim locations

Falsification boundary: The claim fails if any registered carrier, relation, organisation or observation feature is absent, any required external row fails, or any tampered row is accepted.

MAT - S008 — applied at 11 claim locations

Material classes arise from retained constituent and network organisation; molecular-to-bulk claims require scale-stable composition without erasing interfaces, fluctuations or preparation history.

MAT - S009 — applied at 197 claim locations

The literal product contains 256 candidates and the elimination ledger contains exactly 256 one-for-one decisions. Exactly one survives and 255 are eliminated. The forced coordinates are:

MAT - S010 — applied at 197 claim locations

What it means. This law retains every carrier, relation, organization, observation condition, record, provenance edge, positive-finite extension and explicit handoff required by its question. It does not turn a selected specimen, fitted magnitude, imported named model or application outcome into a law. Structural absence remains typed empty One; host numerical 0 is only its display notation.

MAT - S011 — applied at 8 claim locations

Falsification condition: Reject if any registered source identity, available fragment, unavailable row, specimen/method/condition boundary, prediction seal, custody identity, candidate, control or independent reconstruction is missing or changed.

MAT - S012 — applied at 9 claim locations

Falsification condition: Reject if any registered source identity, available fragment, unavailable row, failed route, specimen/method/condition boundary, prediction seal, custody identity, candidate, control or independent reconstruction is missing or changed.

MAT - S013 — applied at 10 claim locations

Falsification condition: Reject if any registered source identity, source byte, available fragment, condition boundary, phase distinction, prediction seal, custody identity, candidate, control or independent reconstruction is missing or changed.

MAT - S014 — applied at 152 claim locations

Falsification condition: Reject if any registered source, fragment, condition, path, seal, custody identity, candidate, control or independent reconstruction is missing or changed.

MAT - S015 — applied at 12 claim locations

Falsification condition: Reject if any registered member, receipt, control, evidence file, result class, closure scope, formal-only boundary or source-custody row is missing, changed, duplicated or selected after outcome access.
