

Adult Guide - E01 Something Is Here

Review version 1.6.0 Author: Maria Smith Audience: parents, carers, early-years practitioners and teachers Final-publication status: awaiting Maria Smith's approval

Purpose

The child joins the permanent team, Mia, Sol and Tavi, in one continuous journey. The Star Door is shut. A note comes through its letter box and lands next to Mia. She picks it up, opens it and reads FIND NOTHING. FIVE CLUES WILL SHOW THE WAY. The note begins the journey. Each star opens the way to the next room: the parcel, bells, paper, letter tiles and curtain. Nori is the one new friend introduced in this adventure. Five checked clues open the Star Door. Two little doors answer the note's question. In the library, Tavi asks the child to remember the first clue before Mia puts the map away.

The child experiences each distinction before receiving its short name. A challenge page asks the child to look, listen, pretend-draw, point or remember; the following reveal names what happened. The printed words always sit above the illustration. The same story, rooms, characters and causal order drive the companion game.

A welcoming beginning

Book One and Level One must begin by welcoming the child into the same magical world before the mystery starts. The opening should not assume that the child already knows the characters, the Star Door or how to play.

The book's first pages and the game's short opening cutscene should:

1. invite the child through the magical entrance into the Star Door rooms;
2. introduce Mia, Sol and Tavi by name, voice and one simple action each;
3. tell the child that they are part of the team and may look, listen, point, move things and try again;
4. show the shut Star Door before the note arrives;
5. tease that a mystery and five clues are waiting without giving away what any clue means; and
6. show the note coming through the letter box, landing beside Mia, and being picked up before its words are read.

Keep this introduction warm, visual and brief. It is a story invitation, not a lesson summary or a menu. On replay it may be watched again or skipped by an adult or returning child. Skipping it must never skip the first activity.

Narrative rule

Every new object, reward and room must have a visible cause:

1. a note comes through the shut Star Door's letter box;
2. the note establishes five clues and the map shows five dark stars;

3. each room is reached because the previous clue changes the route;
4. one checked clue lights exactly one star;
5. five lit stars open the Star Door;
6. both little doors are inspected before the result;
7. the library callback asks a memory question without giving its answer; and
8. filing the map closes E01 before the next parcel previews E02.

If the child loses the thread, use: “Mia's note gave us a question. We are following five clues so we can answer it.” Do not add an unrelated reward or term.

Vocabulary rule

Do not use a learning word as though its meaning were already known. Let the child see or perform the distinction, then give the short explanation.

- empty - the named thing is not inside the container;
- still - not moving during this short check;
- blank - there is no mark on the card;
- hidden - blocked from this view, not erased or gone;
- word - letters placed together so they can be read;
- remember - bring an earlier clue back to mind;
- no object shown - no object has been supplied for us to inspect; and
- check - look, listen or try again within the agreed activity.

The child book avoids candidate grammar, counterexample, occurrence, operational boundary and direct forcing. Those terms remain here so adults can protect the scientific scope without making a young child repeat language they have not experienced.

Exact SFT source

Claim: SFT-ROOT-THERE-IS-NO-NOTHING Status: independently replicated Provenance: direct forcing Closure: depth-independent within the declared operational boundary Receipt: sha256: 711864171e4d3a2f2734f0c2890965bcd81a0228349538751a3c80699c27d669

Exact statement:

No admissible operational statement, denial, record, proof object or
derivational object is nothing: absence presents no counterexample, while
every presented counterexample is an occurrence.

The complete declared grammar has two named classes:

1. Unpresented absence supplies no statement, denial, record, trace or identity, so it supplies no operational counterexample.
2. Presented occurrence supplies a statement, denial, record, trace or identity; that presentation is an occurrence and is not nothing.

The theorem does not claim knowledge of an unexpressed metaphysical domain. The book's story scenes are educational translations; they do not prove a new theorem or replace the admitted claim package. External curricula, voice models and image tools are references or production tools, never authorities in SFT derivation.

Before sharing

The book is complete without extra materials. Optional large, safe materials are an open box or bowl, a familiar toy, a bell controlled by an adult, sturdy paper with thick crayons, and a cloth. Avoid small parts, blindfolds, enforced silence and hiding an essential comfort object. The child may watch, point, sign, speak, move, draw or opt out.

For every challenge/reveal pair:

1. read the challenge and pause;
2. let the child scan the illustration before prompting;
3. accept any clearly identified present detail;
4. ask “What helped you decide?” rather than “Are you sure?”;
5. turn the page and compare with the reveal; and
6. keep a different first answer and inspect it together.

The reveal is a shared check, not a score screen.

Page-by-page guidance

Pages 3-6 - the door, note and route

Point to the shut Star Door, its letter box and the note beside Mia. Follow Mia as she picks up, opens and reads the note. Then locate the five star shapes with no gold inside them. Sol's joke adds fun; Tavi encourages careful looking without giving an answer. Trace the arrow with a finger. The optional ROOMSTAR code is hidden on page 5 and unlocks only a character moment in the game.

Pages 7-9 - Sol's box

Move the toy out in imagination or with a real large toy. Pause on Sol's claim. The reveal keeps both records: the toy is outside and the box remains. Empty means the named toy is not inside this box. It does not mean the box became nothing. Optional code: BOXCLUE on page 9.

Pages 10-12 - Nori and the bell

Allow one comfortable listening breath. “No ring” is bounded to this short listen. Nori's breath and the still bell remain. Do not describe silence as a substance or require the child to be still. Optional code: QUIETWINGS on page 12.

Pages 13-15 - Mia's card

Both pretend choices are allowed. If the child makes a mark, the mark and card are available. If the child leaves it blank, the card remains. Blank means no mark on this card; it does not mean no card was shown. Optional code: BLANKEDGE on page 15.

Pages 16-18 - the word on the tiles

Point across N-O-T-H-I-N-G from left to right. The written word is itself a visible, sayable and readable record. Naming nothing does not make the tiles vanish. This is an early literacy experience, not a spelling test.

Pages 19-21 - the curtain

Let the child decide before opening the curtain. The activity concerns one chosen view: the curtain blocks the toy and later reveals it. Hidden means blocked from this view, not erased. Optional code: CURTAINMAP on page 21.

Pages 22-26 - the final doors

The fifth star visibly pays off the route established on page 4. Door A offers a card; Door B offers no object. Inspect both. The intended result is neither: A presents a card and B does not present an object, so the story does not invent a secret one. Page 26 connects that result back to the original note. Optional code: TWODOORS on page 25.

Pages 27-30 - delayed recall and Tavi's method

Tavi asks which thing became empty after the child moved Sol's teddy outside, and then waits. If the child chooses the toy, use only the process hint "The toy was outside. What was empty?" The hint does not state the answer. Page 28 reveals the box. Page 30 names Tavi's transferable habit: look, say what changed, and check that the answer matches what the child found.

Pages 31-32 - close and continue

The map is already filed before the new parcel arrives, so E01 has a complete ending. The new question previews E02 without teaching or unlocking its answer.

What the narrator explains after each game

After every mini-game, the narrator speaks directly to the child. The narrator first says what the child did, then what the visible result showed, gives the useful word in plain language, and says why that discovery helps the team. This explanation comes after a genuine attempt, never before the child has had a chance to notice or decide.

1. The note and five stars: "You found the note beside Mia. The five star outlines are waiting to be filled. Each clue we check will light one star and help us open the Star Door."
2. Sol's toy box: the child moved the teddy outside, so the box is empty of the teddy while the box and teddy are still present. Empty tells us what is not inside a named container; it does not mean the container is nothing.
3. Nori's bell: during this short check the bell did not ring, but the bell, the room and the listening team remained. Reporting "no ring" is a clear observation about what was checked.
4. Mia's card: a blank card has no mark on it. The card is still present, and a drawn mark is present if the child chooses to make one.
5. The letter tiles: the letters make the readable word NOTHING. A word that can be seen, touched or spoken is something the team can inspect.
6. The curtain: the curtain blocked one view of the toy. Hidden means the toy could not be seen from there; opening the curtain showed that it had not vanished.

7. The two little doors: one door presented a card and the other presented no object. The team reports exactly what each door showed and does not invent a secret object behind the second result.
8. Tavi's memory check: remembering the box and checking the earlier scene helped the child say exactly what changed. Looking back is a useful way to test a first answer.

At the end of the level, the narrator joins these discoveries in one simple fourth-wall explanation: the team never found a thing called “nothing”. They found an empty box, no ring during one listen, a blank card, a written word, a hidden toy and one door that supplied no object. Each result could still be noticed, described or checked. That matters because clear words help us say what really happened instead of guessing. This closing explanation must match its visible caption exactly.

Returning-character guardrail

Every future level introduces one memorable lesson character. An earlier character may return through a natural story encounter or as an optional hint after a genuine attempt. A returning character may ask how the child looked or model an investigative habit. They must never identify the new answer. The new lesson must remain understandable when a child has not played the earlier one.

Common misconceptions and responses

“An empty box is nothing.”

“The toy is not inside. What can you point to that is still here?”

“Nothing happened when the bell did not ring.”

“You noticed no ring. What did you do while you checked?”

“If I cannot see it, it is nothing.”

“In this picture the curtain blocks one view. What can we try next?”

“Door B shows a secret nothing.”

“Door B did not show an object. We do not add a secret one.”

“The theorem tells us everything about what nobody could express.”

It does not. The admitted claim concerns operational statements, denials, records, proof objects and derivational objects. It makes no claim of knowledge over an unexpressed metaphysical domain.

Accessibility

- Read all text and image descriptions aloud when helpful.
- Offer large tactile versions of the box, card and cloth.
- Colour is never the only cue; every target has shape, position or text.
- Accept speech, sign, gaze, pointing, drawing and communication aids.
- Allow extra processing time and repeat any scene without penalty.
- Use the semantic HTML edition for scalable text and page descriptions.
- The PDF contains selectable text but is not claimed as a fully tagged PDF.

Companion digital adventure

Level One is a full-screen moving-stage adventure, not a read-and-scroll menu. Characters walk into each generated 3D room, idle, speak and celebrate. The child spots Mia's note, moves Sol's toy, listens at Nori's bell, draws on Mia's card, taps the letters, opens the curtain, inspects both doors and remembers an earlier clue with Tavi. Local sound effects respond to those actions.

All spoken lines, including the opening and every post-game explanation, are pre-rendered from Maria Smith's local Kokoro ONNX weights and must match their visible captions exactly. Narration remains offline after installation. Kokoro supplies voices only and has no authority over the lesson or SFT claim. The game collects no name, age, email, location, voice, image or analytics; progress stays on the device.

Level One has its own gentle magical-mystery background theme. It may change instrument or intensity as the team moves through a room, but it should remain recognisably the Level One music and must not be reused as the main theme of another level. Music stays below speech and briefly softens during narration. A plainly labelled music control lets the child or adult turn background music on or off without muting narration, captions or necessary action sounds. The choice is remembered on this device. When the app loses focus, every sound pauses; on return, only the current scene's music or requested narration may resume. A completed line must not restart or overlap a new line.

Book codes unlock optional jokes, visits or previews. They never gate a clue, explanation, star, route or answer. A hint callback appears only after an attempt and asks a process question rather than revealing the result.

Connecting the book and Level One

The book and game each teach the complete lesson, so either may be used first. They share the same causes, meanings and results, while the game gives the child movement, choice, sound and replay rather than copying the page exactly.

- Before a book challenge or game, remind the child only of the mission: “We are following five clues to answer Mia's note.”
- Let the child attempt the activity before using the reveal or the narrator's explanation.
- If help is needed, ask “What can you see?”, “What changed?” or “What could we check?” Do not name the object, position or answer for the child.
- After the narrator explains a discovery, find the matching book scene and invite the child to show the evidence there, or reverse the order after reading the book.
- Treat a different first answer as something to compare, not a failure to erase. Replay the action and let the visible result settle the question.
- Book codes are optional surprises. Never suggest that a child must find a code to understand or finish the lesson.

Reference-only curriculum navigation

The play can support attention, turn-taking, communication, early literacy, observation and expressive response. Those usability links are calibrated against Early Years practice. Curricula are not scientific dependencies and do not validate the theorem.

Scientific checks preserved

The admitted claim passed the complete two-class census, minimality, named-shape uniqueness, false-premise, tampered-source, tampered-artifact and boundary controls, plus implementation-distinct reconstruction. No empirical claim is added. The rooms, props and characters demonstrate language and checking; they do not measure or prove the formal theorem.
