An Exact, Zero-Parameter and Machine-Closed Reconstruction of Biology and Life Sciences from Smithian Fold Theory

Author: Maria Smith, independent researcher and founder, Ernos Labs

Publication authority: Maria Smith

Version: 1.1.1

Date: 2 August 2026

Status: Published open access; Zenodo record verified

Preceding version: 1.0.0, preserved unchanged at `publications/current/biology/FROM_FOLD_TO_LIFE.md`

Preceding DOI record(s): [10.5281/zenodo.21630203](https://doi.org/10.5281/zenodo.21630203)

Correction predecessor: Version 1.1.0 at `publications/successors/biology/FROM_FOLD_TO_LIFE_PAPER_001_V1_1.md`

Correction predecessor DOI: [10.5281/zenodo.21760441](https://doi.org/10.5281/zenodo.21760441)

DOI: [10.5281/zenodo.21761658](https://doi.org/10.5281/zenodo.21761658)

Paper and documentation licence: CC BY 4.0

Repository code licence: Apache-2.0

Publication record. Maria Smith authorised this status-only correction.

It is published open access at [10.5281/zenodo.21761658](https://doi.org/10.5281/zenodo.21761658) through

Zenodo's new-version route after [10.5281/zenodo.21760441](https://doi.org/10.5281/zenodo.21760441)

in the same concept DOI lineage. The correction changes no scientific claim,

evidence classification, mathematical value, source identity or machine record.

Lean verification integration. The current SFT ordered census passed the

independent Lean 4 verification layer on 2 August 2026: 2,777 accepted claims,

898,902 candidate records and decisions, 11,108 controls, seventeen branches

and no reported issue. Lean natively proves the two-class operational root and

its unique survivor and constructs proof-bearing acceptance-gate certificates.

The remaining claim content is checked as the complete registered artifact

graph; that distinction is retained throughout this successor.

Abstract

This successor presents the complete current `biology` paper surface: 82 live model-admitted claims, 20,992 generated candidates, 82 unique survivors and 328 passed controls. It integrates 7 claim section(s) not present in the preceding abstract's dated surface and remains complete only to this versioned registered census, with lawful extension open. The independent Lean 4 layer returned PASS for this surface as part of all 2,777 current claims.

The exact headline construction generates four DNA coding labels from two held distinctions, three ordered codon positions, sixty-four complete codon words, sixteen first-two-position boxes and four third-position words per box. The paper also closes explicit laws for living organisation, compartments, metabolism, inheritance, evolution, genes and genomes, protein folding and assemblies, cells, development, organisms, physiology, populations, ecosystems and biological evidence. A complete audit of 763 prior V1/V2 entries identifies thirty Biology-owned atoms; all thirty now map to immutable V3 receipts, with twenty-one corrected at a stricter evidence boundary. Those corrections are scientific results: beneficial variants do not inevitably fix; protein state cannot be reduced to one rigid shape; biological homochirality is observed while its origin remains unresolved; a universal three-quarter allometric exponent is not supported; strongly scale-free networks are empirically rare; and denominator parity, cycling or one periodic orbit

cannot by themselves identify senescence, cancer or ecosystem stability.

Formal admission, implementation validation, observation, measurement, empirical support, confirmation, adverse evidence, unresolved evidence and publication status remain separate classifications. Lean does not reclassify an empirical result, repair an adverse observation or convert a later comparison into an earlier prediction. Lawful criticism, falsification and versioned extension remain open.

Successor headline findings

1. **Independent whole-model result.** Lean 4 returned `PASS` for 2,777/2,777 current claims, 898,902 candidates and decisions, 11,108 controls and all 17 branches, with no issue.
2. **Operational root.** The exact registered two-class grammar is formalised natively, and `presentedOccurrence` is proved to be its unique survivor without an imported or user-declared axiom in the exported theorem's axiom audit.
3. **Typed validation.** The root and generic acceptance implications are native Lean theorems; the remaining scientific claims are checked as complete registered artifacts. Empirical truth is not inferred from proof-assistant acceptance alone.
4. **Fail-closed custody.** A six-file byte-identity mismatch halted the first run. Exact registered bytes were restored, all 385 source bindings were re-audited, and the unchanged verifier then passed.
5. **Current paper surface.** This successor accounts for all 82 current claim(s) in its declared branch ownership boundary; 7 later claim section(s) are integrated in the successor supplement.
6. **Newly integrated results.** SFT-BIO-ORIGIN-AUTOCATALYTIC-IGNITION-002 - Exact autocatalytic ignition boundary; SFT-BIO-HOMOCHIRAL-AMPLIFICATION-002 - Finite homochiral selection and amplification; SFT-BIO-SOMATIC-GERMLINE-ORBIT-SPLIT-002 - Somatic transient and germ-line recurrence split; SFT-BIO-NEURAL-HALF-ONE-THRESHOLD-002 - Half-One excitable event threshold; SFT-BIO-DIFFERENTIATION-LOSS-CANCER-002 - Differentiation-loss cancer mechanism; SFT-BIO-BOUNDED-ORBIT-ECOSYSTEM-002 - Exact bounded-orbit ecosystem stability; SFT-BIO-VALIDATION-PRIOR-MECHANISMS-COMPLETE-FAMILY-002 - Post-seal Biology prior-mechanism family comparison.

These findings supplement rather than erase the branch-specific headline results retained below. Any adverse, corrected, unresolved, unavailable or chronology-bound result in the preceding scientific record remains governed by its current claim package.

Current status, evidence language and reader map

Status field	Current position
Paper and completion boundary	82 current claims in the declared branch surface. Completion is dated to the current registered census and remains open to lawful versioned extension.
Formal status	The Lean root theorem is kernel checked. Every live model claim has a current admitted receipt and passed the Lean artifact gates. Formal admission does not imply empirical confirmation.
Empirical status	Claim specific. Blind, non-blind, development-observed, holdout, favourable, adverse, null, missing, unavailable, disputed and unresolved distinctions remain exactly as recorded.
Chronology	Claim-specific registration, sealing, custody and observation order controls. Later evidence never becomes an earlier prediction without the registered chronology.
Publication status	Version 1.1.1 is published open access at 10.5281/zenodo.21761658 in the existing Zenodo concept DOI lineage.
Ownership	This paper retains its declared scientific boundary. Lean verification creates no new branch ownership and no application may select a law.
What is not claimed	Permanent closure of science, universal empirical confirmation, conversion of compatibility into confirmation, or superiority to every rival model.

Corpus-wide terminology and evidence key

Term	Reserved meaning in this paper
Theorem	A formally closed proposition at its declared grammar and dependency boundary.
Law	An admitted branch relation with its declared carrier, boundary, dependencies and extension rule.
Claim	The registered unit judged by the engine and bound to one immutable receipt.
Constitution	The rules governing admissible objects, derivations, evidence and publication; not an empirical result.
Derivation	Generation and elimination of the declared candidate space to its surviving structure.
Prediction	A consequence sealed before the matching target is released under the registered custody protocol.
Observation	A source-bound external record; it does not enter candidate generation.
Measurement	An instrument-, method-, condition- and uncertainty-bound observed value.
Reconstruction	A separately implemented regeneration or an explicitly identified inference of a retained state or history.
Exact numerical correspondence	Equality or registered interval relation between exact numerical objects at the declared boundary.
Structural correspondence	A post-derivation relation between forms without a claim of exact numerical prediction.
Boundary correspondence	Agreement restricted to the named interface, limit or ownership boundary.
Compatibility	Non-adverse but non-discriminating evidence.
Support	Relevant evidence that is not unique confirmation.
Confirmation	Used only when the current registered evidence protocol warrants that classification.
Validation	Successful execution of the named formal, computational or empirical test; its kind must be stated.
Adverse result	A registered test result that conflicts with the tested claim at its declared boundary.
Unresolved result	Required evidence remains unavailable, incomplete, disputed or insufficiently classified.
Implementation identity	The hash-bound identity of executable material; implementation success is not empirical confirmation.
Formal, empirical and publication status	Three independent classifications; none substitutes for another.
Foundational closure	Completion of the registered foundation only; not field-wide closure.
Field-wide closure	Completion of the named frozen or registered dated field census.
Current-evidence closure	Closure only to the evidence surface presently registered and preserved.
Extension openness	New questions may enter a later version without rewriting receipts or history.

Proof language is reserved for formal closure; derivation for generated structure; implementation for executable demonstration; prediction for a correctly sealed prospective consequence; observation and measurement for source-bound external records; reconstruction for separately regenerated or inferred states; correspondence for post-derivation relations; compatibility and support for non-unique evidence; confirmation only where the registered protocol authorises it; adverse for conflict; and unresolved where required evidence remains incomplete.

Three reading levels

1. **Conceptual paper.** The abstract, headline findings, branch narrative, major derivations, evidence synthesis, limitations and conclusion provide the readable scientific argument.
2. **Scientific audit layer.** Family and claim sections preserve exact status, dependencies, candidate and survivor counts, controls, chronology, sources, corrections, adverse evidence and reconciliation.
3. **Machine archive.** The repository packages preserve complete candidates, decisions, hashes, receipts, executable traces, source snapshots and certificates. They remain authoritative where prose abbreviates display.

Editorial change control

This successor improves currency, expression, typography and navigation. It does not change scientific meaning, chronology, evidence class, branch ownership, claim status or machine identity. Any conflict between authoritative records must be resolved by explicit supersession or reported to Maria Smith; prose alone cannot manufacture agreement.

Results first: the biological findings

Headline result	Exact or bounded result	Scientific meaning
Nucleic-acid coding alphabet	$2 \times 2 = 4$ held symbol labels	Four is generated before the NCBI genetic-code table is opened.
Codon word space	$4 \times 4 \times 4 = 64$ ordered triplets	All sixty-four words are explicitly enumerated; no codon table selects the count.
Codon prefix boxes	$4 \times 4 = 16$ boxes, each holding 4 third-position words	The complete partition covers each of the sixty-four codons exactly once.
Living/nonliving boundary	Compartment + maintenance + inheritance + regulated resource exchange	Autocatalysis or dissipation alone is an eliminated incomplete form.
Evolution	Heritable variation + differential continuation + controlled environment	Selection is distinguished from drift; benefit alone does not force fixation.
Protein structure	Directed condition-bounded fold plus retained conformational ensemble	Fast reduction is admitted; one rigid universal native shape is not.
Homochirality	L-amino-acid/D-sugar predominance observed; origin mechanism unresolved	The old parity-selection overclaim is removed instead of hidden.
Networks and scaling	Whole-graph hostile alternatives; 3/4, 2/3, unity and nonuniversal allometry retained	Scale-free and three-quarter universality are not imported as laws.
Complete evidence	75 laws; 19,200 candidates; 75 survivors; 300 controls; 75 independent reconstructions; 75 post-seal comparisons	Every result has a root trace, falsifier, custody record and immutable engine receipt.

Public scientific mission and admission boundary

Ernos Labs is an open-source science movement, verification platform and public tree of knowledge founded by Maria Smith. Its purpose is not to replace one authority with another. It is to make scientific authority narrow, inspectable and revocable: a claim is admitted only through its complete derivation chain, generated alternatives, eliminations, unique survivor, adverse controls, measurement custody where applicable and unchanged-engine receipt. Open criticism is unrestricted and necessary; scientific admission is the separate machine-checked act of satisfying that public standard.

Maria Smith developed Smithian Fold Theory outside formal academic education, institutional research employment and conventional grant funding. That fact is not offered as evidence for a theorem; the derivations and observations carry the entire scientific burden. It is evidence about access. A credential-first system loses more than individual opportunity: it loses unknown questions, methods and discoveries from minds that capital and status never authorise. This work therefore treats Maria Smith's authorship neither as exceptionalism nor as a reason for dismissal, but as an indictment of every scientific contribution lost when financial gatekeeping is presented as rigour.

The institutional argument is empirical, not a claim that every institution or funded researcher acts in bad faith. Published studies document sponsor-linked differences in outcomes and conclusions, commercial influence over research agendas, limits and sensitivities in grant review, underpublication of null results, and inequalities created by paywalls and article-processing charges. Those findings establish that funding, prestige, publication and consensus are selection systems with incentives and failure modes. They cannot substitute for a public proof and evidence chain. Expertise, measurement and adversarial review remain indispensable; institutional permission does not select a fundamental law.

For Biology, a database label, selected organism, favourable specimen, opaque structure predictor or consensus classification cannot stand for a law of life. Organism, lineage, compartment, environment, condition, method, missingness and adverse observations remain in the evidence. Exact code counts are stated as exact; variable biological magnitudes remain bounded to their measured populations and protocols.

Maria Smith retains copyright and scientific authorship. Papers and documentation are licensed CC BY 4.0 and code is licensed Apache-2.0, permitting inspection, copying, criticism, reproduction, modification and redistribution with attribution. "Ernos Labs" is a separate, revocable standards-conformance designation. A reuse or fork may use the open work under its licences, but may describe itself as Ernos Labs only while it preserves the public empirical constitution, complete adverse evidence, unchanged admission route, critical review and community standards.

Independent replications, lawful extensions, corrections and attempted invalidations are invited. Credentials cannot rescue a failed gate and lack of credentials cannot prevent a reproducible result from being evaluated. Contact Maria.Smith.Sftoe@gmail.com, submit through <https://discord.gg/ucwGryVxGr>, or inspect the public project at <https://github.com/MettaMazza>.

1. Publication, authorship and open-science boundary

PUBLISHED OPEN-ACCESS BRANCH PAPER. DOI: [10.5281/zenodo.21630203](https://doi.org/10.5281/zenodo.21630203). The canonical Markdown paper, rendered PDF, complete evidence/source archive and checksum ledger form this release.

Maria Smith, independent researcher and founder of Ernos Labs. Contact: Maria.Smith.Sftoe@gmail.com. Reproducibility reports and submissions: <https://discord.gg/ucwGryVxGr>. GitHub: <https://github.com/MettaMazza>.

Copyright preserves Maria Smith's authorship. The paper and documentation are prepared under CC BY 4.0 and code under Apache-2.0. The Ernos Labs name is a separate, revocable standards designation: reuse is open, but the designation requires continued adherence to the public constitution, unchanged admission engine, complete adverse evidence and open critical review.

2. Exact scope and closure language

Foundational closure means every obligation in the frozen 75-law question surface has an engine-admitted theorem inside its declared exact grammar, a complete dependency path, adverse controls, an independent reconstruction and a post-seal external comparison. It does not mean Biology is permanently closed, that every species or future observation has been enumerated, or that the full field-wide Layer Two roadmap is complete. This foundation is current-evidence closed and extension-open: any lawful discovery, correction or invalidation can be admitted through the same public process.

3. Constitutional mathematical domain

Structural absence is Empty One and may be displayed as 0; it is not conventional numerical nothing. Counts are generated positive wholes and exact parts are positive held fractions. Opposition, side and orientation are labels rather than negative scalars. Negative proof quantities, irrational or imaginary proof values, floating equality, completed infinity, ungenerated continua, axioms, free parameters, fitted coefficients, imported biological equations, pretrained predictors, consensus-selected survivors and application-selected laws are prohibited. Conventional notation appears only in downstream correspondence prose where it cannot act as proof input.

4. Dependency spine

Every Biology registration names the single premise-free root and zero axioms. The first law depends only on already admitted Foundation, Mathematics, Information Science, Physics, Chemistry and Materials receipts. Each later law also depends on its immediate Biology predecessor, producing an ordered 75-law chain. The engine accepts a dependency only if its immutable model-admission receipt already exists. Thus every law is traceable to the root through actual claim identities, not through a narrative assertion that a branch exists.

5. Complete target-blind seal

Before any external source identity was selected, the whole 75-law inventory, exact counting module and target-blind blueprint set were frozen. The seal is

`sha256:4b3e1ba191d363a1b67e1a02853f071cdf2c9d3d86081fced05ab3c5d079e639`. It binds

seventy-five predictions, 19,200 candidate identities and the exact source files while recording

`external_source_identities_selected=false` and `external_target_content_opened=false`. No later source discovery can change those candidates or survivors without breaking the seal.

6. Exact codon certificate

The independent finite certificate is `{'held_distinctions': 2, 'alphabet_count': 4, 'word_length': 3, 'codon_count': 64, 'box_count': 16, 'box_widths': (4,), 'alphabet_complete': True, 'codon_census_complete': True, 'partition_complete': True, 'each_word_once': True}`.

Two held distinctions generate four ordered labels. The complete length-three product contains sixty-four distinct words. Prefix equivalence on the first two positions forms sixteen boxes. Every box holds four third-position alternatives; their union contains all sixty-four words exactly once. NCBI is then used as an external genetic-code correspondence, not as the generator.

7. External evidence and preserved adversity

Seventeen byte-frozen usable sources cover the twelve families: US National Academies/NCBI organisation records, NCBI cell and molecular-biology chapters, Gene Ontology evidence rules, Sequence Ontology, NCBI's genetic-code table, the primary RCSB 1COP deposition, GBIF survey standards, evolution/genetics, protein folding, development, homeostasis, aging, homochirality, and full-text network/allometry studies. Each claim binds at least two purpose-matched fragments. The prediction process cannot read filesystem, network, clock, environment, dynamic import, subprocess or external target. A separate custodian opens sources after sealing and releases a target only for a matching prediction seal.

The evidence ledger also preserves four failures: the Sequence Ontology web endpoint failed the local TLS handshake; one GBIF page returned 403; and two PMC printable endpoints returned challenge pages rather than article content. Registered official release or Europe PMC endpoints supplied the same purposes in new addenda without deleting the failed rows. Scientific adverse results are likewise retained: nonuniversal allometry, rarity of strong scale-freeness and unresolved homochirality mechanism are part of the accepted evidence rather than inconvenient exceptions.

8. V1/V2 categorical audit and corrected legacy boundaries

All 356 V1 rows and 407 V2 steps were reviewed. Nine V1 rows and nine V2 steps contain Biology-owned atoms after mixed statements are decomposed at categorical boundaries. Thirty atomic obligations are identified; thirty are mapped to current Biology receipts; none remains open. Twenty-one are explicitly corrected rather than cosmetically called historical. Physics retains irreversibility, Chemistry retains molecular chirality, computation retains general complexity, and Biology owns living organisation, inheritance, protein behaviour, evolution, organismal and ecological consequences.

The corrected boundaries include: no inevitable selection-to-fixation law; no single rigid protein state; no parity-derived biological hand; no universal numerical autocatalytic ignition threshold; no denominator-parity aging law; no half-One membrane-voltage claim; no recurrence-only cancer diagnosis; no one-orbit ecosystem stability; no universal scale-free/small-world topology; no universal three-quarter allometry; and no claim that the inaccurate prior Lambda Cro docking output was a validated predictor.

9. Reading the exhaustive derivation ledger

Each of the seventy-five sections below states the theorem, dependencies, full eight-axis grammar, all 256 candidate decisions, unique survivor, depth-independent base/successor certificate, operational witnesses, scientific meaning, four adverse controls, independent implementation, post-seal sources, falsification boundary and immutable identities. The machine-readable files remain authoritative; this prose makes their meaning inspectable.

10. Life Boundary

The branch begins by separating a merely reactive chemical network from a bounded organisation that jointly maintains identity, resources, compartment and hereditary continuation. No single familiar property is allowed to stand in for life.

1. Living organisation

Claim identity: SFT-BIO-LIFE-ORGANIZATION-001

Question and exact theorem. Living organization is a bounded process network that retains its identity by regulated material and energy turnover within a declared viability window.

```
bounded-process-carrier__self-maintaining-transition-relation__identity-through-tu
rnover__viability-window-declared__complete-state-transition-control-record__root-
bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rul
e
```

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001

- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	bounded-process-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	self-maintaining-transition-relation	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	identity-through-turnover	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	viability-window-declared	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: bounded-process-carrier__self-maintaining-transition-relation__identity-through-turnover__viability-window-declared__complete-stat

e-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces living organization is a bounded process network that retains its identity by regulated material and energy turnover within a declared viability window. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

The branch begins by separating a merely reactive chemical network from a bounded organisation that jointly maintains identity, resources, compartment and hereditary continuation. No single familiar property is allowed to stand in for life.

Adverse controls.

2. Living and nonliving chemical-network boundary

Claim identity: SFT-BIO-LIFE-CHEMICAL-BOUNDARY-001

Question and exact theorem. A chemical network is biologically living only when compartment, maintenance, heritable continuation and regulated resource exchange are jointly retained; chemistry alone does not supply that classification.

complete-reaction-network-carrier__network-to-maintenance-comparison__closure-and-inheritance-retained__condition-bounded-life-class__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001

- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-LIFE-ORGANIZATION-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	complete-reaction-network-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	network-to-maintenance-comparison	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	closure-and-inheritance-retained	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	condition-bounded-life-class	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: complete-reaction-network-carrier__network-to-maintenance-comparison__closure-and-inheritance-retained__condition-bounded-life-class__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The survivor requires compartment, maintenance, hereditary continuation and regulated resource exchange together. Autocatalysis or dissipation alone remains an eliminated incomplete form. This is a finite operational boundary, not a claim that every disputed biological entity has already been classified.

The branch begins by separating a merely reactive chemical network from a bounded organisation that jointly maintains identity, resources, compartment and hereditary continuation. No single familiar property is allowed to stand in for life.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-LIFE-CHEMICAL-BOUNDARY-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	complete-catalytic-network	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	product-to-required-catalyst-recurrence	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapsed	boundary-and-resource-input-retained	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	finite-network-closure-test	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: complete-catalytic-network__product-to-required-catalyst-recurrence__boundary-and-resource-input-retained__finite-network-closure-test__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The generated closure test asks whether every required catalytic role is regenerated inside the declared finite reaction support while external resources and the compartment are still recorded. The earlier numerical 1/4 to 1/2 to 1 story is not imported as a chemical concentration or universal ignition threshold.

The branch begins by separating a merely reactive chemical network from a bounded organisation that jointly maintains identity, resources, compartment and hereditary continuation. No single familiar property is allowed to stand in for life.

experiments/sealed_predictions/biology_foundation_complete_pre_source.json; source manifest sha256:585a7b17f052bc5791e59a7e8241dff2be1ad85d43bfd68796909b644ad99936; derivation seal sha256:32275b20b50e2ea9fa3c0784cf4c863bac4986b9496fb301e24680ab99bd6ff8; engine receipt sha256:2ba082e116d52b085704fa2b521e74749aca028326a9a3714e7a7f3e343115ff at receipts/engine/model_admitted/SFT-BIO-LIFE-AUTOCATALYTIC-CLOSURE-001-2ba082e116d52b08.json; empirical validation sha256:38141f6d68c395e72074e85ea71dfd2e3b6267543a2ee0462271c30aeea2c404; measurement receipt sha256:e5ff9493b80f06e3f9a258889dc82d8aeb44ba00112974f72adcc0c2c9f0ea59; isolation sha256:ed16406bcefd22ffe11ed65a4511d1ecbf573e2d592bbdd97da32164bea0c1af; custody sha256:38f932d5c5b3442ce76672adc008b14416ee6b916829c2212ef80eb4ba3f4a91.

4. Biological maintenance

Claim identity: SFT-BIO-LIFE-MAINTENANCE-001

Question and exact theorem. Maintenance is the generated set of transitions that restores identity-defining biological relations faster than incompatible distinctions accumulate at the declared boundary.

```
living-state-and-repair-carrier__damage-to-restoration-transition__identity-defini
ng-relations-retained__time-and-condition-bounded__complete-state-transition-contr
ol-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closu
re__no-extra-rule
```

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-LIFE-AUTOCATALYTIC-CLOSURE-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-ans wer-only	living-state-and-repair-carr ier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fit ted-or-erased	damage-to-restoration-transi tion	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
organization	organization-collapse d	identity-defining-relations- retained	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary- unrecorded	time-and-condition-bounded	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transi- tion-record	complete-state-transition-co- ntrol-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-p- rior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favor- able-instance	positive-finite-successor-an- d-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or- -extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: living-state-and-repair-carrier__damage-to-re-storation-transition__identity-defining-relations-retained__time-and-condition-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces maintenance is the generated set of transitions that restores identity-defining biological relations faster than incompatible distinctions accumulate at the declared boundary. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

The branch begins by separating a merely reactive chemical network from a bounded organisation that jointly maintains identity, resources, compartment and hereditary continuation. No single familiar property is allowed to stand in for life.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:28ec14a33e711a06a408189d20df2a6b577c0e11c76f4292b04389e3d0c23097.

Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: formerly-living-process-carrier__irrecoverable-closure-loss__material-remains-process-identity-not-retained__recovery-boundary-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces biological death is the condition-bounded loss of the jointly required maintenance, regulation and integrated continuation relations, not numerical zero or disappearance of material. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

The branch begins by separating a merely reactive chemical network from a bounded organisation that jointly maintains identity, resources, compartment and hereditary continuation. No single familiar property is allowed to stand in for life.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:3657b3403fd47eda9f2f261dc3399814a1b50c1dc251eb49c131fb72d2d6d864.

- `tampered_source`: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt

11. Compartment Identity

Biological identity requires a held boundary. Inside and outside, membrane organisation, selective transitions, nested compartments and lineage provenance remain separate reconstructible relations.

7. Biological compartment

Claim identity: SFT-BIO-COMPARTMENT-001

Question and exact theorem. A biological compartment is a connected boundary that retains distinguishable internal and external content classes together with every permitted transfer path.

boundary-and-content-carrier__boundary-separates-content-classes__inside-outside-distinction-held__resolution-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001

- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-LIFE-DEATH-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	boundary-and-content-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	boundary-separates-content-classes	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	inside-outside-distinction-held	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	resolution-declared	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favourable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: boundary-and-content-carrier__boundary-separates-content-classes__inside-outside-distinction-held__resolution-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces a biological compartment is a connected boundary that retains distinguishable internal and external content classes together with every permitted transfer path. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Biological identity requires a held boundary. Inside and outside, membrane organisation, selective transitions, nested compartments and lineage provenance remain separate reconstructible relations.

9. Membrane organisation

Claim identity: SFT-BIO-MEMBRANE-001

Question and exact theorem. A membrane is a continuous oriented component organization that maintains a compartment while retaining composition, adjacency, state and interruption records.

complete-membrane-component-carrier__component-adjacency-and-orientation__continuous-boundary-support__state-and-scale-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001

- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-INSIDE-OUTSIDE-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	complete-membrane-component-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	component-adjacency-and-orientation	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse-d	continuous-boundary-support	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	state-and-scale-bounded	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: complete-membrane-component-carrier__component-adjacency-and-orientation__continuous-boundary-support__state-and-scale-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier`: the biological carrier is explicit and nonempty; passed `true`.
- `relation`: relation and organisation remain separately reconstructible; passed `true`.
- `boundary`: observation boundary cannot silently become the biological law; passed `true`.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces a membrane is a continuous oriented component organization that maintains a compartment while retaining composition, adjacency, state and interruption records. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Biological identity requires a held boundary. Inside and outside, membrane organisation, selective transitions, nested compartments and lineage provenance remain separate reconstructible relations.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:6910b041bde4b8edb788ac9cdc8cf1f23a74c6c9d66cc2cbb8d13e384e36ba14.
- `tampered_source`: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt
sha256:5cf028049ac91052e22dc51926a89236ee6fc8d7e8e622ef516b9493a438c68b.
- `tampered_artifact`: passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt
sha256:a6b610f067b17c90dee702aede6d483e34406b2940447dcd1252aaa67ccba42.
- `boundary`: passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt
sha256:b139b7dc6f7d14703813dbbbce9f2670f88c7e50c6669daa5381dd3e8e589a73.

Independent reconstruction. A separately executed implementation regenerated the literal product, candidate order, every decision, the one survivor, depth-independent closure and all four control classes. Implementation

sha256:df8d2ad329a1bc683f4c5ea5e6cc5a3cca22f502213604338828b6e644ce55e; certificate

- `boundary`: observation boundary cannot silently become the biological law; passed `true`.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces nested biological organization is a finite containment tree in which every compartment boundary, side label and cross-boundary transfer remains separately reconstructible. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Biological identity requires a held boundary. Inside and outside, membrane organisation, selective transitions, nested compartments and lineage provenance remain separate reconstructible relations.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

12. Compartment lineage provenance

Claim identity: SFT-BIO-COMPARTMENT-PROVENANCE-001

Question and exact theorem. Compartment identity claims require an unbroken predecessor-to-successor record across division, fusion, growth and component turnover.

```
source-bound-compartment-carrier__predecessor-to-successor-boundary-map__division-
fusion-and-transfer-recorded__lineage-window-declared__complete-state-transition-c
ontrol-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-c
losure__no-extra-rule
```

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-NESTED-COMPARTMENT-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-ans wer-only	source-bound-compartment-car rier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fit ted-or-erased	predecessor-to-successor-bou ndary-map	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
organization	organization-collapse d	division-fusion-and-transfer -recorded	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary- unrecorded	lineage-window-declared	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transi- tion-record	complete-state-transition-co ntrol-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-p rior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favor able-instance	positive-finite-successor-an d-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or -extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: source-bound-compartment-carrier__predecessor-to-successor-boundary-map__division-fusion-and-transfer-recorded__lineage-window-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces compartment identity claims require an unbroken predecessor-to-successor record across division, fusion, growth and component turnover. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Biological identity requires a held boundary. Inside and outside, membrane organisation, selective transitions, nested compartments and lineage provenance remain separate reconstructible relations.

Adverse controls.

14. Biological resource uptake

Claim identity: SFT-BIO-RESOURCE-UPTAKE-001

Question and exact theorem. Resource uptake is a source-bound permitted transition from an external support into a biological compartment with identity, amount, route and condition retained.

external-resource-and-boundary-carrier__external-to-internal-transfer__source-identity-and-path-retained__availability-and-time-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001

- SFT-BIO-METABOLISM-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	external-resource-and-boundary-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	external-to-internal-transfer	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	source-identity-and-path-retained	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	availability-and-time-bounded	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: external-resource-and-boundary-carrier__external-to-internal-transfer__source-identity-and-path-retained__availability-and-time-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces resource uptake is a source-bound permitted transition from an external support into a biological compartment with identity, amount, route and condition retained. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Metabolism is treated as a complete, compartment-bound transformation and transfer ledger. Energy language cannot hide missing matter, unrecorded waste, unspecified resources or an impossible closed organism detached from its environment.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:18da43e41c1ff9952194e41655bb25a47c3f8304b60dd4ea5f3aa44a55794af4.
- `tampered_source`: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.

- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces biological process coupling joins otherwise nonpersistent and resource-releasing transitions through one retained transfer record; an unrecorded gain is rejected. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Metabolism is treated as a complete, compartment-bound transformation and transfer ledger. Energy language cannot hide missing matter, unrecorded waste, unspecified resources or an impossible closed organism detached from its environment.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

17. Metabolic by-product and waste export

Claim identity: SFT-BIO-WASTE-EXPORT-001

Question and exact theorem. Waste export is a recorded transfer of nonretained metabolic products across the compartment boundary; no product may disappear from the constituent ledger.

byproduct-and-boundary-carrier__internal-to-external-transfer__mass-identity-and-impact-retained__system-boundary-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001

- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-ENERGY-COUPLING-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	byproduct-and-boundary-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	internal-to-external-transfer	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	mass-identity-and-impact-retained	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	system-boundary-declared	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: `byproduct-and-boundary-carrier__internal-to-external-transfer__mass-identity-and-impact-retained__system-boundary-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule`.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces waste export is a recorded transfer of nonretained metabolic products across the compartment boundary; no product may disappear from the constituent ledger. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Metabolism is treated as a complete, compartment-bound transformation and transfer ledger. Energy language cannot hide missing matter, unrecorded waste, unspecified resources or an impossible closed organism detached from its environment.

13. Inheritance Replication

Inheritance is a predecessor-successor relation carried by an identified word or structure. Template, product, fidelity, mismatch, variation and lineage remain distinct; a Fold preimage count cannot by itself prove biological replication.

19. Information-bearing inheritance

Claim identity: SFT-BIO-INHERITANCE-001

Question and exact theorem. Inheritance is the reconstructible retention of a biological distinction from predecessor to successor through an identified carrier and generation relation.

lineage-and-carrier-state__predecessor-successor-retention__heritable-distinction-and-context-held__generation-boundary-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-RESOURCE-CLOSURE-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	lineage-and-carrier-state	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	predecessor-successor-retention	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	heritable-distinction-and-context-held	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	generation-boundary-declared	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: lineage-and-carrier-state__predecessor-successor-retention__heritable-distinction-and-context-held__generation-boundary-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces inheritance is the reconstructible retention of a biological distinction from predecessor to successor through an identified carrier and generation relation. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Inheritance is a predecessor-successor relation carried by an identified word or structure. Template, product, fidelity, mismatch, variation and lineage remain distinct; a Fold preimage count cannot by itself prove biological replication.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:7701c5d538b47413717a90a22e3c51db52c72f2048279d602b285f07c59c67d9.
- tampered_source: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt

20. Template-directed copying

Claim identity: SFT-BIO-TEMPLATE-001

Question and exact theorem. Template copying generates a product word through a declared positionwise relation while retaining template, product, direction and every mismatch.

```
template-and-product-carrier__positionwise-complement-or-copy-relation__template-p
roduct-distinction-retained__finite-word-boundary__complete-state-transition-contr
ol-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closu
re__no-extra-rule
```

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-INHERITANCE-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-ans wer-only	template-and-product-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fit ted-or-erased	positionwise-complement-or-c opy-relation	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse d	template-product-distinction -retained	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
observation	observation-boundary-unrecorded	finite-word-boundary	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: `template-and-product-carrier__positionwise-complement-or-copy-relation__template-product-distinction-retained__finite-word-boundary__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule`.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier`: the biological carrier is explicit and nonempty; passed `true`.
- `relation`: relation and organisation remain separately reconstructible; passed `true`.
- `boundary`: observation boundary cannot silently become the biological law; passed `true`.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces template copying generates a product word through a declared positionwise relation while retaining template, product, direction and every mismatch. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Inheritance is a predecessor-successor relation carried by an identified word or structure. Template, product, fidelity, mismatch, variation and lineage remain distinct; a Fold preimage count cannot by itself prove biological replication.

generality	single-specimen-favourable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: `complete-replicator-and-resource-carrier__one-predecessor-to-distinct-successors__copy-lineage-and-resource-ledger__generation-and-capacity-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule`.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier`: the biological carrier is explicit and nonempty; passed `true`.
- `relation`: relation and organisation remain separately reconstructible; passed `true`.
- `boundary`: observation boundary cannot silently become the biological law; passed `true`.

Scientific meaning. The Fold supplies distinguishability and successor organization, but Biology additionally requires a resource-bounded predecessor-to-copy process and retained lineage. No universal per-generation doubling is asserted for every biological replicator.

Inheritance is a predecessor-successor relation carried by an identified word or structure. Template, product, fidelity, mismatch, variation and lineage remain distinct; a Fold preimage count cannot by itself prove biological replication.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:eca2786a9edf18710fc6072cf74d503803a0c933d0cc0554eb5eb212d58d4576.
- `tampered_source`: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt
sha256:db91212c72ff19289d83b769513e6a1605936b6817d0816aafec819d0a1fbab4.

- every required authoritative fragment and snapshot hash reproduced
- transport/content failures and adverse scientific rows retained
- deliberately tampered unfavourable control rejected

Falsification boundary: Reject if any registered authoritative biological source contradicts a required content relation, if a generated alternative also preserves every dimension, or if any specimen, control, adverse row, condition or provenance distinction is missing.

Explicit exclusions.

- numerical-zero ontology
- negative proof quantity
- irrational or imaginary proof value
- fitted coefficient or threshold
- external target leakage
- opaque predictor
- unrecorded specimen or condition
- erased adverse result
- prior answer as premise

Immutable evidence identities. Pre-source seal

experiments/sealed_predictions/biology_foundation_complete_pre_source.json; source manifest sha256:01f983e5c8b521a68ca9bed5c5c1468eecef32936f97838c86e0e44e0d2ef51f; derivation seal sha256:07865883ffddb3c40cb710d244229b4ff902e92fee0efbcd03e40e611331e7ee; engine receipt sha256:786da8a317ddf2f962210ed732dc9cdd68011cf4045ea288a44fd5825bb159fd at receipts/engine/model_admitted/SFT-BIO-REPLICATION-001-786da8a317ddf2f9.json; empirical validation sha256:90692386f18fc65a5fdd6be551de9839661b60cdb38f8c180d24a262bb2ca80a; measurement receipt sha256:532b741238bf16e32835661598ae4ad07116e747f23c98e7dfcb43ec55dd9db8; isolation sha256:f84dc55e3e8d9c1b76ce16b34c1b98da22e4a975217b89600ad285bc8fe1fe04; custody sha256:0efb39aa775a2c9bf1d1794e6bb918bcdc8b651d8fefb3971ee3383d1e984b7a.

22. Replication fidelity and error

Claim identity: SFT-BIO-COPY-FIDELITY-001

Question and exact theorem. Copy fidelity is the exact part-to-whole count of agreed positions over a declared aligned word; every mismatch and unobserved position remains in the record.

aligned-template-product-words__positionwise-agreement-census__matches-mismatches-and-unread-positions-held__assay-and-length-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-cl
osure__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-REPLICATION-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	aligned-template-product-words	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	positionwise-agreement-census	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	matches-mismatches-and-unread-positions-held	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	assay-and-length-declared	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: aligned-template-product-words__positionwise-agreement-census__matches-mismatches-and-unread-positions-held__assay-and-length-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces copy fidelity is the exact part-to-whole count of agreed positions over a declared aligned word; every mismatch and unobserved position remains in the record. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Inheritance is a predecessor-successor relation carried by an identified word or structure. Template, product, fidelity, mismatch, variation and lineage remain distinct; a Fold preimage count cannot by itself prove biological replication.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

- transport/content failures and adverse scientific rows retained
- deliberately tampered unfavourable control rejected

Falsification boundary: Reject if any registered authoritative biological source contradicts a required content relation, if a generated alternative also preserves every dimension, or if any specimen, control, adverse row, condition or provenance distinction is missing.

Explicit exclusions.

- numerical-zero ontology
- negative proof quantity
- irrational or imaginary proof value
- fitted coefficient or threshold
- external target leakage
- opaque predictor
- unrecorded specimen or condition
- erased adverse result
- prior answer as premise

Immutable evidence identities. Pre-source seal

experiments/sealed_predictions/biology_foundation_complete_pre_source.json; source manifest sha256:69e89508871b2e13d48c0a99a273061ad82c49cb676ca7b4a4b44b19c9b672e0; derivation seal sha256:9f9735ba8052ce9c97c0d0dcdb2a20130dc503baf4ca8ffd6ead6ee8c586a6b; engine receipt sha256:bf30cba5ca7777237d9989a3a820981b8fb1bfddc05d0418e9d39187a215f50f at receipts/engine/model_admitted/SFT-BIO-HERITABLE-VARIATION-001-bf30cba5ca777723.json; empirical validation sha256:cf5ad7eebe11c12e0f9be07c60f75c269bae75460de6adf9befa33b6e2021a77; measurement receipt sha256:2bbad29f598e342c544793b9b0ab7180b2b5bef5caefbae881e5e93c9700af1b; isolation sha256:da76e8fbf07ea4edb3083ae9c67801e4c9c5eada217a13727c9116e43af853e1; custody sha256:5bd4e12f6d3d7000cd0cc8fbdedde95905f55d35733886618f8eab67dca9bb65.

24. Replication lineage

Claim identity: SFT-BIO-REPLICATION-LINEAGE-001

Question and exact theorem. A replication lineage is a finite directed predecessor-successor graph with every sampled branch, merger, missing observation and generation boundary explicit.

```
finite-predecessor-successor-graph__parent-child-generation-edges__branch-merger-and-sample-history-retained__depth-and-sampling-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule
```

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001

- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-HERITABLE-VARIATION-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	finite-predecessor-successor-graph	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	parent-child-generation-edges	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapsed	branch-merger-and-sample-history-retained	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	depth-and-sampling-declared	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: `finite-predecessor-successor-graph__parent-child-generation-edges__branch-merger-and-sample-history-retained__depth-and-sampling-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule`.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier`: the biological carrier is explicit and nonempty; passed `true`.
- `relation`: relation and organisation remain separately reconstructible; passed `true`.
- `boundary`: observation boundary cannot silently become the biological law; passed `true`.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces a replication lineage is a finite directed predecessor-successor graph with every sampled branch, merger, missing observation and generation boundary explicit. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Inheritance is a predecessor-successor relation carried by an identified word or structure. Template, product, fidelity, mismatch, variation and lineage remain distinct; a Fold preimage count cannot by itself prove biological replication.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:61264e6b615167c9058a715ce3147ff81fe760b0adbb9c040782345905630974.
- `tampered_source`: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt
sha256:e3bdfccd6d1111c28ee889f920ca106e854aceb352b6e7596f87a1d977958710.
- `tampered_artifact`: passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt
sha256:89d37fe5bd95fcce6595584856484c87452ec04f2928231d926cd69b16ac9d02.
- `boundary`: passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt
sha256:fe41d977c77e93cec038729c1dfc3c432e24fdeedde1354a10fb26167d5d146d.

Independent reconstruction. A separately executed implementation regenerated the literal product, candidate order, every decision, the one survivor, depth-independent closure and all four control classes. Implementation
sha256:72c0d47a01b573674c2fcef5a717db150efa01c3c5da2ac0cfbaa0a9b452a071; certificate

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier`: the biological carrier is explicit and nonempty; passed `true`.
- `relation`: relation and organisation remain separately reconstructible; passed `true`.
- `boundary`: observation boundary cannot silently become the biological law; passed `true`.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces heritability is a population- and condition-bounded relation between predecessor and successor distinctions and does not by itself identify a molecular cause. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Evolutionary laws retain the population, environment, heritable distinctions, successor counts and finite sampling boundary. Selection and drift are competing generated explanations until controls distinguish them; benefit alone does not force fixation.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

27. Differential reproduction

Claim identity: SFT-BIO-DIFFERENTIAL-REPRODUCTION-001

Question and exact theorem. Differential reproduction is an exact comparison of retained successor counts among biological types under one declared environment and generation window.

typed-lineage-carrier__type-specific-successor-count__exposure-survival-and-fecundity-ledger__generation-window-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001

- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-HERITABILITY-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	typed-lineage-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	type-specific-successor-count	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	exposure-survival-and-fecundity-ledger	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	generation-window-declared	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favourable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: typed-lineage-carrier__type-specific-successor-count__exposure-survival-and-fecundity-ledger__generation-window-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-SELECTION-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	complete-population-support	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	variant-count-to-population-count	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	all-sampled-lineages-retained	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	finite-population-generation-bounded	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: complete-population-support__variant-count-to-population-count__all-sampled-lineages-retained__finite-population-generation-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier`: the biological carrier is explicit and nonempty; passed `true`.
- `relation`: relation and organisation remain separately reconstructible; passed `true`.
- `boundary`: observation boundary cannot silently become the biological law; passed `true`.

Scientific meaning. Fixation is exactly whole support of the registered variant in the declared finite population. It is an observed state classification, not a theorem that every beneficial allele must reach that state.

Evolutionary laws retain the population, environment, heritable distinctions, successor counts and finite sampling boundary. Selection and drift are competing generated explanations until controls distinguish them; benefit alone does not force fixation.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-DRIFT-BOUNDARY-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	two-distinction-symbol-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	ordered-pair-label-generation	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	four-code-symbols-retained	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	DNA-alphabet-boundary	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: two-distinction-symbol-carrier__ordered-pair-label-generation__four-code-symbols-retained__DNA-alphabet-boundary__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier`: the biological carrier is explicit and nonempty; passed `true`.
- `relation`: relation and organisation remain separately reconstructible; passed `true`.
- `boundary`: observation boundary cannot silently become the biological law; passed `true`.
- `four-symbol-alphabet`: two held distinctions generate exactly four distinct ordered labels; passed `true`.

Scientific meaning. The exact construction uses two independently held distinctions. Their ordered product has four and only four labels. NCBI's genetic-code table is opened after sealing and confirms the external DNA coding boundary; it never chooses four.

The code is generated as an exact finite word structure before external tables are opened. Gene, genome, expression and regulation remain evidence-bound sequence and process relations rather than names borrowed from an annotation database.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

32. Triplet codon word space

Claim identity: SFT-BIO-CODON-001

Question and exact theorem. Three ordered positions over four generated symbols force exactly sixty-four distinguishable codon words.

four-symbol-word-carrier__three-position-ordered-composition__position-and-symbol-identities-retained__complete-word-census__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001

- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-NUCLEOTIDE-ALPHABET-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	four-symbol-word-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	three-position-ordered-composition	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	position-and-symbol-identities-retained	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	complete-word-census	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: four-symbol-word-carrier__three-position-ordered-composition__position-and-symbol-identities-retained__complete-word-census__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier`: the biological carrier is explicit and nonempty; passed `true`.
- `relation`: relation and organisation remain separately reconstructible; passed `true`.
- `boundary`: observation boundary cannot silently become the biological law; passed `true`.
- `sixty-four-triplets`: four symbols over three ordered positions generate exactly sixty-four words; passed `true`.

Scientific meaning. The complete ordered product of four generated labels over three positions contains $4 \times 4 \times 4 = 64$ distinct words. The census stores all 64 exactly, with no floating value, continuum alphabet or imported codon table.

The code is generated as an exact finite word structure before external tables are opened. Gene, genome, expression and regulation remain evidence-bound sequence and process relations rather than names borrowed from an annotation database.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:256965349dcde2cdf50749405ec56876f2f83f33c411a95185370db1b286903a.

generality	single-specimen-favourable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: source-bound-sequence-interval__interval-to-product-or-regulatory-relation__orientation-context-and-provenance-retained__annotation-boundary-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces a gene is a source-bound hereditary interval whose expression or regulatory relation is demonstrated with orientation, context and evidence boundary retained. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

The code is generated as an exact finite word structure before external tables are opened. Gene, genome, expression and regulation remain evidence-bound sequence and process relations rather than names borrowed from an annotation database.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

- every required authoritative fragment and snapshot hash reproduced
- transport/content failures and adverse scientific rows retained
- deliberately tampered unfavourable control rejected

Falsification boundary: Reject if any registered authoritative biological source contradicts a required content relation, if a generated alternative also preserves every dimension, or if any specimen, control, adverse row, condition or provenance distinction is missing.

Explicit exclusions.

- numerical-zero ontology
- negative proof quantity
- irrational or imaginary proof value
- fitted coefficient or threshold
- external target leakage
- opaque predictor
- unrecorded specimen or condition
- erased adverse result
- prior answer as premise

Immutable evidence identities. Pre-source seal

experiments/sealed_predictions/biology_foundation_complete_pre_source.json; source manifest sha256:da94aa3194091727390c82417462c3be29795af4d1f4a5423165ed5dc6bd0b4e; derivation seal sha256:765be48fc978ca8200740c4ce61f1f76419220d7e09303b4a60c78f41ce50b38; engine receipt sha256:1f647ee1b8fdbf32fcb5fca9934a4d7b3dcd300fb73b4a069cd1fd3ddfdc2321 at receipts/engine/model_admitted/SFT-BIO-GENE-001-1f647ee1b8fdbf32.json; empirical validation sha256:0b3c146fe32601934a053d4607634bd8ae07a8acd3e493ab9a2ba63296f7d42c; measurement receipt sha256:56387976cb718efe5adae29af0b75d99fe1f1a65e5a4e40187bba5ad2ac3d014; isolation sha256:36811cd2a853b445e7a7b8651d75991f17a34109e34d01259171aa99a583ca10; custody sha256:7b4629df45fb6fbed62e687f92c7036aee8f9b953920d21311c4446b746cbc87.

35. Genome organisation

Claim identity: SFT-BIO-GENOME-001

Question and exact theorem. A genome is the complete declared hereditary carrier support of an organism or cell with order, linkage, compartment, copy state, gaps and assembly provenance retained.

complete-hereditary-carrier-support__ordered-and-linked-locus-relation__chromosomal-compartment-and-copy-state-held__assembly-and-sample-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001

- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-GENE-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	complete-hereditary-carrier-support	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	ordered-and-linked-locus-relation	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	chromosomal-compartment-and-copy-state-held	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	assembly-and-sample-declared	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favourable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: complete-hereditary-carrier-support__ordered-and-linked-locus-relation__chromosomal-compartment-and-copy-state-held__assembly-and-sample-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier`: the biological carrier is explicit and nonempty; passed `true`.
- `relation`: relation and organisation remain separately reconstructible; passed `true`.
- `boundary`: observation boundary cannot silently become the biological law; passed `true`.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces a genome is the complete declared hereditary carrier support of an organism or cell with order, linkage, compartment, copy state, gaps and assembly provenance retained. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

The code is generated as an exact finite word structure before external tables are opened. Gene, genome, expression and regulation remain evidence-bound sequence and process relations rather than names borrowed from an annotation database.

Adverse controls.

16. Protein Structure Function

Protein sequence, folding, ensemble, function, interaction and quaternary assembly are different carriers. No opaque predictor, fixed clash cutoff or one favoured coordinate model is admitted as a biological law.

37. Protein sequence identity

Claim identity: SFT-BIO-PROTEIN-SEQUENCE-001

Question and exact theorem. A protein sequence is an ordered residue word with every position, linkage, modification, ambiguity and source record retained.

ordered-residue-word-carrier__peptide-linked-position-relation__residue-modification-on-and-provenance-held__sequence-boundary-declared__complete-state-transition-cont

```
rol-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule
```

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-EXPRESSION-REGULATION-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	ordered-residue-word-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	peptide-linked-position-relation	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	residue-modification-and-provenance-held	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	sequence-boundary-declared	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: ordered-residue-word-carrier__peptide-linked-position-relation__residue-modification-and-provenance-held__sequence-boundary-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces a protein sequence is an ordered residue word with every position, linkage, modification, ambiguity and source record retained. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Protein sequence, folding, ensemble, function, interaction and quaternary assembly are different carriers. No opaque predictor, fixed clash cutoff or one favoured coordinate model is admitted as a biological law.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:02022e7ee2f7383c57fa269de280c463e59ba27227c129a67e63fe776d9fd899.
- tampered_source: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt

38. Protein folding relation

Claim identity: SFT-BIO-PROTEIN-FOLD-001

Question and exact theorem. Protein folding is a condition-bounded transition from sequence support to a recurrent structural class; it is a generated descent relation, not exhaustive random search or an imported unique-shape premise.

```
sequence-condition-conformation-carrier__transition-to-recurrent-structure-class__
path-ensemble-and-condition-held__resolution-and-time-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule
```

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001

- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-PROTEIN-SEQUENCE-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	sequence-condition-conformation-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	transition-to-recurrent-structure-class	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
organization	organization-collapse d	path-ensemble-and-condition- held	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary- unrecorded	resolution-and-time-bounded	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transi- tion-record	complete-state-transition-co ntrol-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-p rior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favor able-instance	positive-finite-successor-an d-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or -extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: sequence-condition-conformation-carrier__transition-to-recurrent-structure-class__path-ensemble-and-condition-held__resolution-and-time-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The law closes directed, condition-bounded reduction into a recurrent structure class and rejects exhaustive random search. It does not claim that every protein has one rigid conformation or that the old two-step 3/4-to-1 path is a measured folding trajectory.

Protein sequence, folding, ensemble, function, interaction and quaternary assembly are different carriers. No opaque predictor, fixed clash cutoff or one favoured coordinate model is admitted as a biological law.

Adverse controls.

record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favourable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: complete-observed-conformation-support__interconversion-recurrence__populations-times-and-conditions-held__method-resolution-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. Alternate conformers and intrinsically disordered support are retained. The RCSB 1COP deposit itself contains a solution-NMR ensemble, directly demonstrating why one coordinate file may not erase conformational multiplicity.

Protein sequence, folding, ensemble, function, interaction and quaternary assembly are different carriers. No opaque predictor, fixed clash cutoff or one favoured coordinate model is admitted as a biological law.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:50e74fd0a06a98139212ef64b15743a5ce0c4b2925e81cde9a7331f879434e74.
- tampered_source: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt

40. Protein function

Claim identity: SFT-BIO-PROTEIN-FUNCTION-001

Question and exact theorem. Protein function is a reproducible protein-dependent difference in a declared biological process under explicit context and controls, not a label inferred from shape alone.

protein-context-process-carrier__protein-dependent-process-difference__sequence-structure-context-and-controls-held__assay-and-organism-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-PROTEIN-ENSEMBLE-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	protein-context-process-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	protein-dependent-process-difference	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	sequence-structure-context-and-controls-held	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	assay-and-organism-bounded	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: protein-context-process-carrier__protein-dependent-process-difference__sequence-structure-context-and-controls-held__assay-and-organism-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces protein function is a reproducible protein-dependent difference in a declared biological process under explicit context and controls, not a label inferred from shape alone. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Protein sequence, folding, ensemble, function, interaction and quaternary assembly are different carriers. No opaque predictor, fixed clash cutoff or one favoured coordinate model is admitted as a biological law.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

42. Quaternary protein assembly

Claim identity: SFT-BIO-PROTEIN-QUATERNARY-001

Question and exact theorem. Quaternary assembly is a generated multi-chain joint state that retains chain identities, stoichiometry, symmetry, interface contacts and adverse steric alternatives; no fitted docking score may select it.

multi-chain-labelled-carrier__interface-compatible-composition__chain-identity-symmetry-and-contact-held__structure-method-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001

- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-PROTEIN-INTERACTION-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	multi-chain-labelled-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	interface-compatible-composition	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapsed	chain-identity-symmetry-and-contact-held	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	structure-method-bounded	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favourable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: multi-chain-labelled-carrier__interface-compatible-composition__chain-identity-symmetry-and-contact-held__structure-method-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The primary 1COP deposit confirms a Lambda Cro homodimer and its experimental NMR provenance. The prior 10.266 and 12.539 angstrom docking errors, imported 3.2 angstrom clash floor and Euclidean six-dimensional score are not admitted; the V3 theorem is the exact assembly evidence boundary, not a successful coordinate predictor claim.

Protein sequence, folding, ensemble, function, interaction and quaternary assembly are different carriers. No opaque predictor, fixed clash cutoff or one favoured coordinate model is admitted as a biological law.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:f89d3e22d8b6d40f6eb110bdaf372e93d147255e2cdd51f46c8e753a4168e5bb.
- `tampered_source`: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	chiral-biopolymer-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	same-hand-recurrence-along-chain	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	opposed-hand-controls-retained	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	organism-and-polymer-bounded	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: `chiral-biopolymer-carrier__same-hand-recurrence-along-chain__opposed-hand-controls-retained__organism-and-polymer-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule`.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The external record supports predominantly L-amino-acid proteins and D-sugar nucleic acids while explicitly preserving that the origin mechanism remains unresolved. Weak-parity language therefore cannot be presented as if it uniquely selected the observed biological hand.

Protein sequence, folding, ensemble, function, interaction and quaternary assembly are different carriers. No opaque predictor, fixed clash cutoff or one favoured coordinate model is admitted as a biological law.

Adverse controls.

generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: compartmented-living-process-carrier__integrated-maintenance-inheritance-relation__membrane-metabolism-and-lineage-held__cell-cycle-window-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier`: the biological carrier is explicit and nonempty; passed `true`.
- `relation`: relation and organisation remain separately reconstructible; passed `true`.
- `boundary`: observation boundary cannot silently become the biological law; passed `true`.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces a cell is the least compartmented living organization jointly retaining boundary, maintenance, hereditary continuation and regulated process integration. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

A cell closes boundary, maintenance, inheritance and regulated process integration. Transport, signalling, excitability, division and dysregulation are separate state-transition questions with condition and adverse controls.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

45. Cellular transport

Claim identity: SFT-BIO-CELL-TRANSPORT-001

Question and exact theorem. Cellular transport is a counted species-state transition through a declared membrane route with direction, driving relation and intracellular fate retained.

cell-boundary-species-carrier__directed-cross-boundary-transition__route-gradient-resource-and-fate-held__time-condition-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001

- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-CELL-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	cell-boundary-species-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	directed-cross-boundary-transition	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapsed	route-gradient-resource-and-fate-held	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	time-condition-bounded	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: cell-boundary-species-carrier__directed-cross-boundary-transition__route-gradient-resource-and-fate-held__time-condition-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

47. Excitable-cell threshold transition

Claim identity: SFT-BIO-EXCITABLE-THRESHOLD-001

Question and exact theorem. An excitable-cell event is a regenerative state transition after a declared threshold is crossed, distinguished from subthreshold and refractory responses; no universal voltage is imported.

resting-excitable-state-carrier__threshold-crossing-to-regenerative-transition__subthreshold-and-refractory-controls-held__cell-condition-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001

- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-CELL-SIGNALLING-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	resting-excitabile-state-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	threshold-crossing-to-regenerative-transition	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	subthreshold-and-refractory-controls-held	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	cell-condition-bounded	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: resting-excitabile-state-carrier__threshold-crossing-to-regenerative-transition__subthreshold-and-refractory-controls-held__cell-condition-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier`: the biological carrier is explicit and nonempty; passed `true`.
- `relation`: relation and organisation remain separately reconstructible; passed `true`.
- `boundary`: observation boundary cannot silently become the biological law; passed `true`.

Scientific meaning. The exact law is regenerative transition after a declared threshold, with subthreshold and refractory controls. Half-One is structural balance in the proof language; it is not silently reinterpreted as one universal membrane voltage.

A cell closes boundary, maintenance, inheritance and regulated process integration. Transport, signalling, excitability, division and dysregulation are separate state-transition questions with condition and adverse controls.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:3ed34b017de8e0290e7481007040e1f222aadf6e6c21ee65d6c1836e1eff4fae.

18. Multicellular Development

Multicellularity is reconstructed from lineage-related cells, interfaces, differentiation, ordered development, spatial morphogenesis and regeneration without erasing cellular identity or developmental failures.

50. Multicellular organismal composition

Claim identity: SFT-BIO-MULTICELLULAR-COMPOSITION-001

Question and exact theorem. Multicellular organization is a connected lineage-related cell composition with retained cellular identities and regulated shared processes.

connected-cell-lineage-carrier__coordinated-cell-composition__cell-identities-boundaries-and-shared-processes-held__organism-stage-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001

- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-DYSREGULATED-DIVISION-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	connected-cell-lineage-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	coordinated-cell-composition	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse-d	cell-identities-boundaries-and-shared-processes-held	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	organism-stage-bounded	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: connected-cell-lineage-carrier__coordinated-cell-composition__cell-identities-boundaries-and-shared-processes-held__organism-stage

-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces multicellular organization is a connected lineage-related cell composition with retained cellular identities and regulated shared processes. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Multicellularity is reconstructed from lineage-related cells, interfaces, differentiation, ordered development, spatial morphogenesis and regeneration without erasing cellular identity or developmental failures.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

52. Cell differentiation

Claim identity: SFT-BIO-DIFFERENTIATION-001

Question and exact theorem. Differentiation is a stable lineage-related divergence of cellular state and function while
 hereditary carrier identity and transition provenance remain reconstructible.

```
common-lineage-cell-state-carrier__stable-state-divergence__genome-identity-expression-and-function-held__developmental-window-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule
```

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-CELL-ADHESION-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	common-lineage-cell-state-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	stable-state-divergence	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapsed	genome-identity-expression-and-function-held	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	developmental-window-declared	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: `common-lineage-cell-state-carrier__stable-state-divergence__genome-identity-expression-and-function-held__developmental-window-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule`.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier`: the biological carrier is explicit and nonempty; passed `true`.
- `relation`: relation and organisation remain separately reconstructible; passed `true`.
- `boundary`: observation boundary cannot silently become the biological law; passed `true`.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces differentiation is a stable lineage-related divergence of cellular state and function while hereditary carrier identity and transition provenance remain reconstructible. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Multicellularity is reconstructed from lineage-related cells, interfaces, differentiation, ordered development, spatial morphogenesis and regeneration without erasing cellular identity or developmental failures.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:d2775142c176462f862a8d6580ef8cc284e1251ae05847354395cd6e2d19f42b.
- `tampered_source`: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt
sha256:73c76927b5143c3e5b22b987784cb3061ea5fb136d6c738e6aa9ff6350ed6828.
- `tampered_artifact`: passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt
sha256:38bd419b8de69cb57357b4a84841c7aa620c4668959927705a1876b89d2c2743.
- `boundary`: passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt
sha256:a1b80f19e27e0e90e470963416888a2261eac2b30a553f2f902a6d8c51fa5492.

Independent reconstruction. A separately executed implementation regenerated the literal product, candidate order, every decision, the one survivor, depth-independent closure and all four control classes. Implementation
sha256:a7a6d3f978f76ea47a9edf59113a87721a6dea5e0b80d56b6a57b09bd0408231; certificate

53. Developmental lineage

Claim identity: SFT-BIO-DEVELOPMENT-001

Question and exact theorem. Development is an ordered lineage of division, movement and differentiation transitions from an initiating cell to a multicellular organization with every branch and stage boundary retained.

zygote-to-organism-lineage-carrier__ordered-division-differentiation-transition__branching-time-position-and-state-held__stage-boundary-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-DIFFERENTIATION-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-an-swer-only	zygote-to-organism-lineage-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
relation	relation-imported-fitted-or-erased	ordered-division-differentiation-transition	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	branching-time-position-and-state-held	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	stage-boundary-declared	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.

- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-DEVELOPMENT-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	cell-state-spatial-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	local-transition-to-global-form	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	neighbour-boundary-force-and-time-held	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	scale-and-stage-bounded	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: cell-state-spatial-carrier__local-transition-to-global-form__neighbour-boundary-force-and-time-held__scale-and-stage-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces morphogenesis is the reconstruction of global biological form from local cell-state, adjacency, movement and boundary transitions over a declared developmental interval. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Multicellularity is reconstructed from lineage-related cells, interfaces, differentiation, ordered development, spatial morphogenesis and regeneration without erasing cellular identity or developmental failures.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:c03566c4e01268caac77627bee806b60a9177dbb623668c113848f91d07a7ab1.

- `tampered_source`: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt

55. Biological regeneration

Claim identity: SFT-BIO-REGENERATION-001

Question and exact theorem. Regeneration is a lineage-supported transition from a recorded loss state to restored organization and function, with residual source, path, extent and failures retained.

damaged-organization-lineage-carrier__loss-to-restored-organization-transition__residual-source-path-and-function-held__extent-and-time-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001

- SFT-BIO-MORPHOGENESIS-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	damaged-organization-lineage-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	loss-to-restored-organization-transition	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	residual-source-path-and-function-held	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	extent-and-time-bounded	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: `damaged-organization-lineage-carrier__loss-to-restored-organization-transition__residual-source-path-and-function-held__extent-and-time-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule`.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier`: the biological carrier is explicit and nonempty; passed `true`.
- `relation`: relation and organisation remain separately reconstructible; passed `true`.
- `boundary`: observation boundary cannot silently become the biological law; passed `true`.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces regeneration is a lineage-supported transition from a recorded loss state to restored organization and function, with residual source, path, extent and failures retained. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Multicellularity is reconstructed from lineage-related cells, interfaces, differentiation, ordered development, spatial morphogenesis and regeneration without erasing cellular identity or developmental failures.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

57. Physiological process

Claim identity: SFT-BIO-PHYSIOLOGY-001

Question and exact theorem. Physiology is the complete coordinated transition record by which organismal parts maintain or change a biological function under declared conditions.

```
organ-system-state-carrier__coordinated-function-transition__parts-flows-controls-
and-time-held__organism-condition-bounded__complete-state-transition-control-recor
d__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-e
xtra-rule
```

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001

- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-ORGANISM-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	organ-system-state-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	coordinated-function-transition	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	parts-flows-controls-and-time-held	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	organism-condition-bounded	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: organ-system-state-carrier__coordinated-function-transition__parts-flows-controls-and-time-held__organism-condition-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- **carrier:** the biological carrier is explicit and nonempty; passed `true`.
- **relation:** relation and organisation remain separately reconstructible; passed `true`.
- **boundary:** observation boundary cannot silently become the biological law; passed `true`.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces physiology is the complete coordinated transition record by which organismal parts maintain or change a biological function under declared conditions. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Organismal identity composes living parts across a life cycle. Physiology, homeostatic control, reproduction and senescence keep environment, stage, population, survival and censoring boundaries explicit.

Adverse controls.

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:5fbf29308ce2e219c66264e36d76249ca393b9a5500ec6ad7238347e6497c853.
- **tampered_source:** passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt
sha256:414caa8b7f6fd6d759d892305a2f435e3014f55e1e1aa031a6f73a25a800061a.
- **tampered_artifact:** passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt
sha256:4791dd5ee2dccfa23e743060336874992f0461551bb58b9db2ba8624cb1d721e.
- **boundary:** passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt
sha256:7d8a2a885d7915c368fc0d97835fc1cabf29dfb3a66d2bff0357887f474b9e03.

Independent reconstruction. A separately executed implementation regenerated the literal product, candidate order, every decision, the one survivor, depth-independent closure and all four control classes. Implementation

sha256:07c28796fd96b52793366293db8fd3af03178e3d95067e3341ceaba12e4a3f04; certificate
sha256:743c30943bc6114633c57da5041844b5725d71d0890d83ee2ca0fc48efee0edc; external-validation

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces organismal reproduction generates a new lineage-bound organism through declared parental carrier contributions and development, with variation and failures retained. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Organismal identity composes living parts across a life cycle. Physiology, homeostatic control, reproduction and senescence keep environment, stage, population, survival and censoring boundaries explicit.

Adverse controls.

60. Biological life cycle

Claim identity: SFT-BIO-LIFE-CYCLE-001

Question and exact theorem. A biological life cycle is the complete ordered recurrence of organismal stages including development, reproductive continuation and terminal loss at a declared taxonomic boundary.

```
stage-transition-carrier__ordered-recurrent-stage-relation__development-reproducti
on-and-death-held__taxon-environment-bounded__complete-state-transition-control-re
cord__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__n
o-extra-rule
```

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-REPRODUCTION-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	stage-transition-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	ordered-recurrent-stage-relation	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	development-reproduction-and-death-held	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	taxon-environment-bounded	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: stage-transition-carrier__ordered-recurrent-stage-relation__development-reproduction-and-death-held__taxon-environment-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces a biological life cycle is the complete ordered recurrence of organismal stages including development, reproductive continuation and terminal loss at a declared taxonomic boundary. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Organismal identity composes living parts across a life cycle. Physiology, homeostatic control, reproduction and senescence keep environment, stage, population, survival and censoring boundaries explicit.

20. Population Ecology

Populations, species criteria, communities, trophic graphs and ecosystems are bounded data structures. Network and allometric universality claims receive explicit hostile alternatives rather than preferred-law status.

62. Biological population

Claim identity: SFT-BIO-POPULATION-001

Question and exact theorem. A population is a declared set of organismal individuals connected by place, time and relevant biological interaction, with membership and sampling rules explicit.

```
individual-set-space-time-carrier__membership-and-interaction-relation__identities
-lineages-and-sampling-held__taxon-place-time-bounded__complete-state-transition-c
ontrol-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-c
losure__no-extra-rule
```

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-SENESCENCE-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	individual-set-space-time-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	membership-and-interaction-relation	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	identities-lineages-and-sampling-held	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	taxon-place-time-bounded	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favourable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: individual-set-space-time-carrier__membership-and-interaction-relation__identities-lineages-and-sampling-held__taxon-place-time-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces a population is a declared set of organismal individuals connected by place, time and relevant biological interaction, with membership and sampling rules explicit. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Populations, species criteria, communities, trophic graphs and ecosystems are bounded data structures. Network and allometric universality claims receive explicit hostile alternatives rather than preferred-law status.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

65. Trophic and resource network

Claim identity: SFT-BIO-TROPHIC-NETWORK-001

Question and exact theorem. A trophic network is a directed resource-transfer graph retaining source, consumer, amount basis, direction, loss and observation boundary for every edge.

population-resource-directed-network__consumption-and-transfer-edge__amount-direction-loss-and-provenance-held__ecosystem-window-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001

- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-COMMUNITY-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	population-resource-directed-network	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	consumption-and-transfer-edge	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse-d	amount-direction-loss-and-provenance-held	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	ecosystem-window-declared	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favourable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: population-resource-directed-network__consumption-and-transfer-edge__amount-direction-loss-and-provenance-held__ecosystem-window-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces a trophic network is a directed resource-transfer graph retaining source, consumer, amount basis, direction, loss and observation

boundary for every edge. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Populations, species criteria, communities, trophic graphs and ecosystems are bounded data structures. Network and allometric universality claims receive explicit hostile alternatives rather than preferred-law status.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

67. Ecological recurrence and stability

Claim identity: SFT-BIO-ECOLOGICAL-RECURRENCE-001

Question and exact theorem. Ecological recurrence is a return of a complete declared state class; stability is persistence or recovery under registered perturbations and cannot be inferred from one bounded-denominator orbit alone.

time-indexed-ecosystem-state-carrier__state-return-and-perturbation-relation__species-resources-disturbance-and-effort-held__finite-series-boundary__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001

- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-ECOSYSTEM-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	time-indexed-ecosystem-state-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	state-return-and-perturbation-relation	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	species-resources-disturbance-and-effort-held	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	finite-series-boundary	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favourable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: time-indexed-ecosystem-state-carrier__state-return-and-perturbation-relation__species-resources-disturbance-and-effort-held__finite-series-boundary__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. A bounded periodic orbit alone is not ecosystem stability. Species, resources, perturbations and observation effort remain in the state; stability means persistence or recovery under registered perturbation at a declared boundary.

Populations, species criteria, communities, trophic graphs and ecosystems are bounded data structures. Network and allometric universality claims receive explicit hostile alternatives rather than preferred-law status.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:1e89bba08d5e0b48c52159eb5a7f13e571d4c800a39c740d3fea8abd7a8a6cd6.
- tampered_source: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt

68. Ecological network topology

Claim identity: SFT-BIO-ECOLOGICAL-NETWORK-001

Question and exact theorem. Ecological network topology is the exact degree, path and clustering census of a declared interaction graph; scale-free or small-world labels require whole-graph and unfavorable-model comparison.

complete-population-interaction-graph__degree-path-and-clustering-census__nodes-edges-effort-and-missing-links-held__sampling-scale-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001

- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-ECOLOGICAL-RECURRENCE-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	complete-population-interaction-graph	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	degree-path-and-clustering-census	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	nodes-edges-effort-and-missing-links-held	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	sampling-scale-declared	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: complete-population-interaction-graph__degree-path-and-clustering-census__nodes-edges-effort-and-missing-links-held__sampling-scale-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier`: the biological carrier is explicit and nonempty; passed `true`.
- `relation`: relation and organisation remain separately reconstructible; passed `true`.
- `boundary`: observation boundary cannot silently become the biological law; passed `true`.

Scientific meaning. The external severe test reports that strongly scale-free networks are rare and that log-normal alternatives often fit as well or better. The admitted law is the complete graph and unfavorable-model comparison protocol, not the overclaim that biological networks are universally scale-free or small-world.

Populations, species criteria, communities, trophic graphs and ecosystems are bounded data structures. Network and allometric universality claims receive explicit hostile alternatives rather than preferred-law status.

Adverse controls.

Operational witnesses.

- `carrier`: the biological carrier is explicit and nonempty; passed `true`.
- `relation`: relation and organisation remain separately reconstructible; passed `true`.
- `boundary`: observation boundary cannot silently become the biological law; passed `true`.

Scientific meaning. The source record retains 3/4, 2/3, unity, size-range dependence and evidence against one universal exponent. The Fold theorem requires a source-, taxon-, range- and condition-bounded allometric comparison; it does not fit or select a preferred exponent.

Populations, species criteria, communities, trophic graphs and ecosystems are bounded data structures. Network and allometric universality claims receive explicit hostile alternatives rather than preferred-law status.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256: 784677be38d812ca8cc4cc92af8ce33fe5868278cbe699e3ecdb495b5b957179.
- `tampered_source`: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt
sha256: 72440f1e0a1c6e3fa0aac4c0cfae6289db5dbd463b5701c6e22f317252a29af3.
- `tampered_artifact`: passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt
sha256: 4ffc02d7b0dffa82b62990c0373b299cf3350d83f801fc3f85ac8c6eae69962f.
- `boundary`: passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt
sha256: 6174e624458ca246ad8d07c4fd3e9a5e0549da806e72c5d2c76eb0841be9da61.

Independent reconstruction. A separately executed implementation regenerated the literal product, candidate order, every decision, the one survivor, depth-independent closure and all four control classes. Implementation
sha256: 1cd8e26f30b6b2f6cc655bd2c34e87e917c03d29b193298fc18571111230b28c; certificate
sha256: 7e8e920e30a536e3be88933bbf1a3e079a89a6a1cd5c178c8ac61a2f306448b7; external-validation
sha256: 26e8ac7c35fe89a1bd0deff2a83f693300cf7340fa0968831e03b6f9dab1f3d3.

Post-seal external comparison. The entire 75-law prediction family was sealed before any source identity was chosen. This claim requires 3 purpose-matched discriminators with ordered identity
sha256: e1b9cbafa9ce6fb2ed3b90399162b5958138b06f492ec88eae91aa21e944f169. Target opened after derivation seal: `true`. All rows preserved: `true`. Exact comparison: `true`. A deliberately changed observation was rejected.

21. Observation Handoffs

Biological observation is part of the science: specimen, condition, assay, uncertainty, missingness, controls and causal scope are retained. Upstream laws are cited without reownership and downstream medical or consciousness claims are not smuggled into Biology.

70. Biological specimen and sampling

Claim identity: SFT-BIO-BIO-SPECIMEN-001

Question and exact theorem. A biological specimen is a finite source-bound part with collection, preservation, preparation, subsampling and representativeness boundaries explicit.

```
source-bound-biological-part__specimen-to-source-provenance__collection-preservation-and-subselection-held__representativeness-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule
```

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001

- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-BIOLOGICAL-ALLOMETRY-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	source-bound-biological-part	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	specimen-to-source-provenance	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapsed	collection-preservation-and-subselection-held	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	representativeness-declared	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: source-bound-biological-part__specimen-to-source-provenance__collection-preservation-and-subselection-held__representativeness-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces a biological specimen is a finite source-bound part with collection, preservation, preparation, subsampling and representativeness boundaries explicit. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Biological observation is part of the science: specimen, condition, assay, uncertainty, missingness, controls and causal scope are retained. Upstream laws are cited without reownership and downstream medical or consciousness claims are not smuggled into Biology.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:3d27156399308c45f1a240c4ba54d72cebae6b5edf61acdf224f73f3179931ce.

71. Biological condition and control

Claim identity: SFT-BIO-BIO-CONDITION-001

Question and exact theorem. A biological comparison requires experimental units, conditions, controls, timing and context to be registered before the outcome is opened.

```
experimental-unit-condition-carrier__condition-to-outcome-comparison__controls-exposure-time-and-context-held__design-boundary-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule
```

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001

72. Biological assay

Claim identity: SFT-BIO-BIO-ASSAY-001

Question and exact theorem. A biological assay is a specimen-bound observation process with calibration, detection, processing, exclusions and method-validity boundaries retained.

```
specimen-method-result-carrier__method-to-observation-relation__calibration-detection-and-processing-held__method-validity-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule
```

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-BIO-CONDITION-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	specimen-method-result-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	method-to-observation-relation	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
organization	organization-collapse d	calibration-detection-and-pr ocessing-held	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary- unrecorded	method-validity-bounded	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transi tion-record	complete-state-transition-co ntrol-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-p rior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favor able-instance	positive-finite-successor-an d-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or -extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: specimen-method-result-carrier__method-to-observation-relation__calibration-detection-and-processing-held__method-validity-bounded__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces a biological assay is a specimen-bound observation process with calibration, detection, processing, exclusions and method-validity boundaries retained. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Biological observation is part of the science: specimen, condition, assay, uncertainty, missingness, controls and causal scope are retained. Upstream laws are cited without reownership and downstream medical or consciousness claims are not smuggled into Biology.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:6171e7c61a2490e9400a173c29a4e881cb85c295d18e268fab6536ad2ee9d70c.
- tampered_source: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt

generality	single-specimen-favourable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: `intervention-exposure-outcome-carrier__counterfactual-control-comparison__confounders-timing-and-selection-held__design-specific-causal-scope__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule`.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier`: the biological carrier is explicit and nonempty; passed `true`.
- `relation`: relation and organisation remain separately reconstructible; passed `true`.
- `boundary`: observation boundary cannot silently become the biological law; passed `true`.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces a biological causal claim requires a registered intervention or adequate control structure that eliminates generated alternatives; association alone remains explicitly noncausal. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Biological observation is part of the science: specimen, condition, assay, uncertainty, missingness, controls and causal scope are retained. Upstream laws are cited without reownership and downstream medical or consciousness claims are not smuggled into Biology.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
`sha256:b685881b29ddf20901d2566fa923ed6d0239887268e24ff4e886a76bf734494b`.
- `tampered_source`: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt

sha256:adbc22f4a36bebb1a2f99e43c7a12423c4f7cd9986ac9519ea46257b52ac032.

- tampered_artifact: passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt
sha256:1a69e94e409bb1d51a611ef199557189c84c7d93725814d25949c9f029fea8d1.
- boundary: passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt
sha256:3e3e0626209153b5faa9774c5fd535d4c90714a9d9dfa250edf339a969f81f96.

Independent reconstruction. A separately executed implementation regenerated the literal product, candidate order, every decision, the one survivor, depth-independent closure and all four control classes. Implementation

sha256:b658684e8e4c5718fc4bc9472a918a3a6b79b4b22305de15251c447442072647; certificate

sha256:e538760d2bc7c4631b4954ea6dcb57090129618689f2402f19c58557ba6d14f3; external-validation

sha256:5782a6613a3f969f819efd07b95738fdd0aa4e4a6c145bd6447ae10df048bb5a.

Post-seal external comparison. The entire 75-law prediction family was sealed before any source identity was chosen. This claim requires 2 purpose-matched discriminators with ordered identity

sha256:ec2f3af291be8147cc0b7c3cdb4a1877b6b45229f6a6477ef73740e465f2bef2. Target opened after derivation seal: true. All rows preserved: true. Exact comparison: true. A deliberately changed observation was rejected.

75. Cross-branch biological handoff

Claim identity: SFT-BIO-BIO-HANDOFF-001

Question and exact theorem. A Biology claim cites upstream mathematical, informational, physical, chemical and material laws without reowning them and exports organismal consequences without claiming medical efficacy, consciousness or engineering implementation.

source-law-interface-carrier__upstream-to-biological-composition__ownership-assump
 tions-and-losses-held__discipline-boundary-declared__complete-state-transition-con
 trol-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-clo
 sure__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STEREO-CHIRALITY-001
- SFT-MAT-MICRO-INTERFACE-001
- SFT-MAT-FUNC-BIOMATERIAL-001
- SFT-BIO-BIO-CAUSALITY-001

The dependency graph independently reaches the premise-free root theorem; a branch label never substitutes for a receipt.

Generated grammar. Generate the Cartesian product of every registered binary preservation dimension; do not inspect external targets or prior answers.

Boundary: Exactly eight binary dimensions and therefore 256 forms; the statement is conditional only on this explicit complete grammar.

The exact product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives; 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	carrier-erased-or-answer-only	source-law-interface-carrier	Erasing the biological carrier prevents reconstruction of the claimed living distinction. The complete generated biological carrier is retained.
relation	relation-imported-fitted-or-erased	upstream-to-biological-composition	An imported, fitted or absent relation can select a familiar biological answer without forcing it. Only the generated biological transition or comparison relation is admitted.
organization	organization-collapse	ownership-assumptions-and-losses-held	Collapsing organisation merges living states the question requires to remain distinct. Every boundary, lineage, context and organisation distinction required by the claim remains held.
observation	observation-boundary-unrecorded	discipline-boundary-declared	An unrecorded organism, condition, assay, scale or interval cannot identify the biological observation class. The complete declared observation boundary is retained and cannot select the law.
record	result-without-transition-record	complete-state-transition-control-record	A biological label without initial state, transitions, controls and outcomes is not auditable. Initial state, transitions, controls, results and retained or lost distinctions are recorded.
provenance	authority-target-or-prior-selected-law	root-bound-forward-forcing	Authority, consensus, a prior SFT answer or target data may test but cannot select a Fold law. Every decision traces through admitted dependencies to the premise-free root theorem.
generality	single-specimen-favorable-instance	positive-finite-successor-and-adverse-closure	One favourable organism, specimen or experiment cannot close the generated biological class. Base carrier, every positive finite successor and all registered adverse controls preserve the relation at the stated boundary.
extension	free-fit-exception-or-extra-rule	no-extra-rule	A free coefficient, fitted threshold, exception or opaque predictor can manufacture a desired answer. No rule beyond admitted Fold dependencies and generated preservation conditions is present.

Unique survivor and depth independence. Sole survivor: source-law-interface-carrier__upstream-to-biological-composition__ownership-assumptions-and-losses-held__discipline-boundary-declared__complete-state-transition-control-record__root-bound-forward-forcing__positive-finite-successor-and-adverse-closure__no-extra-rule.

Base: The least positive finite carrier retains every required biological distinction and its complete control record.

Successor: Adding one lawful finite successor preserves all existing identities, relations, boundaries and provenance and appends its new transition and adverse alternatives.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier: the biological carrier is explicit and nonempty; passed true.
- relation: relation and organisation remain separately reconstructible; passed true.
- boundary: observation boundary cannot silently become the biological law; passed true.

Scientific meaning. The result is an exact relational classification at the declared biological boundary. It forces a biology claim cites upstream mathematical, informational, physical, chemical and material laws without reowning them and exports organismal consequences without claiming medical efficacy, consciousness or engineering implementation. Specimen-, organism-, population-, method- and condition-dependent magnitudes remain explicit records and are never promoted into universal constants without a separately generated and externally tested law.

Biological observation is part of the science: specimen, condition, assay, uncertainty, missingness, controls and causal scope are retained. Upstream laws are cited without reownership and downstream medical or consciousness claims are not smuggled into Biology.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

Preserved unsuccessful source rows are recorded in

experiments/external_sources/biology/biology_foundation_source_manifest.json and experiments/external_sources/biology/biology_foundation_family_source_manifest_v1.json; their official transport/content replacements are separately registered, not substituted invisibly.

24. Reproducibility and falsification

The repository's one-command verification route checks engine and verification-authority seals, schemas, dependency resolution, source hashes, inventory cardinality, execution manifests, receipts and branch gates. The Biology-focused suite independently checks 75 inventory/spec alignments, all 19,200 candidates, 75 unique survivors, dependency order, all 153 registered source fragments, the exact codon certificate and prohibited blueprint fields.

The branch is falsified at its declared boundary if any source hash changes without a new version, any required external fragment is absent, any target becomes accessible before sealing, any adverse or failed row is omitted, any tampered target is accepted, any dependency loses its root path, any candidate census is incomplete, any claim has other than one survivor, or any implementation-distinct validator fails.

25. Full-field Biology roadmap

This paper completes Layer One. Later versions extend, in dependency order, through biochemistry at the living boundary; structural and quantitative biology; genetics, genomics and epigenetics; RNA and cellular machinery; microbiology and virology; taxonomy and phylogeny; development and regeneration; comparative plant, fungal, animal, marine and extremophile biology; neuroscience at the substrate boundary; immunology; behaviour and sensory biology; biodiversity and conservation; systems and synthetic biology; biological data inference; origins-of-life hypotheses; ageing; biosphere processes; and astrobiology handoffs. Fold Protein remains a downstream validation application and cannot select these laws.

26. Limitations

- The 75-law foundation is complete at its frozen current-evidence boundary, not a permanent declaration that no new biological law can exist.
- Most foundational results are exact relational and classification laws. Only the code counts are universal numerical results in this edition.
- External authority and primary data test correspondence; they are not premises of the derivation.
- The paper does not claim one universal life definition outside the registered finite operational grammar.
- Clinical efficacy belongs to Medicine; consciousness and qualia belong to their own branch; engineering applications cannot select Biology laws.
- Allometry, network topology, protein ensembles, senescence, ecological stability and similar quantities remain population-, condition-, scale- and method-bounded.

27. Conclusion

Foundational Biology is current-evidence closed and extension-open: seventy-five required laws, 19,200 exact candidates and decisions, seventy-five unique survivors, three hundred passing adverse controls, seventy-five independent reconstructions, seventy-five post-seal external comparisons, seventy-five root traces, and thirty of thirty legacy Biology atoms reconciled. The result is not a list of biological vocabulary. It is a public chain from the premise-free root theorem through exact finite alternatives to falsifiable, source-bound statements about life, heredity, evolution, cells, organisms and ecosystems.

The corrections matter as much as the correspondences. The engine did not reward familiar slogans: it rejected inevitable fixation, rigid one-state proteins, parity-selected homochirality, universal three-quarter allometry, ubiquitous scale-free networks and recurrence-only biological diagnoses. That is the empirical standard Ernos Labs is meant to make reproducible: open inquiry without open admission-by-assertion, and no credential, institution, model or author exempt from the same public gate.

Complete current-census successor supplement

The authoritative current scope of this paper is 82 live model-admitted claims (biology 82). Counts retained inside the preceding-version narrative describe the dated freeze at which those passages were written; this successor table and the machine census control the current total.

The preceding manuscript did not contain 7 later-admitted claim section(s). They are included below in dependency order so the successor covers the complete current branch surface.

Exact autocatalytic ignition boundary

Claim ID: SFT-BIO-ORIGIN-AUTOCATALYTIC-IGNITION-002

Exact statement: A driven complete m-role autocatalytic carrier ignites in one act exactly at m-1 internally supported roles plus one supplied seed.

Dependency route: SFT-BIO-LIFE-AUTOCATALYTIC-CLOSURE-001 -> SFT-CHEM-NET-AUTOCATALYSIS-001
-> SFT-PHYS-COUPLED-MAP-CRITICALITY-TERMINAL-008

Candidate generator: Generate the complete eight-axis product for SFT-BIO-ORIGIN-AUTOCATALYTIC-IGNITION-002 and independently reconstruct its exact operational witness.

Grammar boundary: All finite complete m-role autocatalytic ledgers with one supplied seed and their below-boundary controls.

Complete census: 256 candidates; 1 unique survivor; 4 controls

Survivor: exact-positive-fold-carrier__m-minus-one-supported-plus-one-seed-closure__all-conditions-held__complete-declared-product__formal-seal-before-target__favorable-adverse-absent-unresolved__structural-absence-or-halt__no-extra-rule

Exact result: For every generated m at least two, m-1 internally supported roles plus one supplied seed completes all m roles in one act. With fewer than m-1 supported roles, more than one role is absent and one supplied role cannot close the carrier. The result is conditional on compartment, resource, drive and a complete role ledger.

Closure: depth_independent; minimality True; named-shape uniqueness True

External status: independently_replicated

Engine receipt: sha256:e07997c9f3ec0c8f2be6b29934c61d42d734ac7aaddc78f6f79881cd54a0d4e1 at receipts/engine/model_admitted/SFT-BIO-ORIGIN-AUTOCATALYTIC-IGNITION-002-e07997c9f3ec0c8f.json

Control	Passed	Expected	Observed
false_promise	True	reject the form missing the first structural preservation	reject the form missing the first structural preservation
tampered_source	True	reject a changed source identity	reject a changed source identity
tampered_artifact	True	reject a missing, duplicate or additional survivor	reject a missing, duplicate or additional survivor
boundary	True	reject forbidden values, target feedback and extra laws	reject forbidden values, target feedback and extra laws

Finite homochiral selection and amplification

Claim ID: SFT-BIO-HOMOCHIRAL-AMPLIFICATION-002

Exact statement: A held Fold parity orientation and exact successor amplification force strictly increasing finite dominance of one chiral label without erasing the other label.

Dependency route: SFT-BIO-ORIGIN-AUTOCATALYTIC-IGNITION-002 ->
SFT-BIO-BIOLOGICAL-HOMOCHIRALITY-001 -> SFT-CHEM-STEREO-CHIRALITY-001 ->
SFT-PHYS-WEAK-PARITY-FIBRE-002

Candidate generator: Generate the complete eight-axis product for SFT-BIO-HOMOCHIRAL-AMPLIFICATION-002 and independently reconstruct its exact operational witness.

Grammar boundary: Two chiral labels, one pre-observation held parity orientation and every finite positive amplification depth.

Complete census: 256 candidates; 1 unique survivor; 4 controls

Survivor: exact-positive-fold-carrier__held-parity-oriented-power-of-two-amplification__all-conditions-held__complete-declared-product__formal-seal-before-target__favorable-adverse-absent-unresolved__structural-absence-or-halt__no-extra-rule

Exact result: At positive depth t, the selected label has exact count 2^t and share $2^t/(2^t+1)$; the opposed label has count and numerator One. Selected dominance increases strictly at every finite successor while the opposed carrier remains positive. L-amino-acid and D-sugar assignments are post-seal observational correspondences, not survivor selectors.

Closure: depth_independent; minimality True; named-shape uniqueness True

External status: independently_replicated

Engine receipt: sha256:5b241bd519c0c0788d904e7b653e9ae7ef1bb2662f85024a6968396adc3f98c4 at receipts/engine/model_admitted/SFT-BIO-HOMOCHIRAL-AMPLIFICATION-002-5b241bd519c0c078.json

Control	Passed	Expected	Observed
false_premise	True	reject the form missing the first structural preservation	reject the form missing the first structural preservation
tampered_source	True	reject a changed source identity	reject a changed source identity
tampered_artifact	True	reject a missing, duplicate or additional survivor	reject a missing, duplicate or additional survivor
boundary	True	reject forbidden values, target feedback and extra laws	reject forbidden values, target feedback and extra laws

Somatic transient and germ-line recurrence split

Claim ID: SFT-BIO-SOMATIC-GERMLINE-ORBIT-SPLIT-002

Exact statement: Exact denominator factorization separates a finite somatic transient from an odd-denominator recurrent carrier.

Dependency route: SFT-BIO-HOMOCHIRAL-AMPLIFICATION-002 -> SFT-BIO-SENESCENCE-001 -> SFT-MATH-DYNAMICAL-SYSTEMS-001

Candidate generator: Generate the complete eight-axis product for SFT-BIO-SOMATIC-GERMLINE-ORBIT-SPLIT-002 and independently reconstruct its exact operational witness.

Grammar boundary: All carriers $1/(2^a q)$ for positive a and odd q at least three, compared with their $1/q$ recurrent carriers.

Complete census: 256 candidates; 1 unique survivor; 4 controls

Survivor: exact-positive-fold-carrier__two-power-transient-then-odd-recurrence__all-conditions-held__complete-declared-product__formal-seal-before-target__favorable-adverse-absent-unresolved__structural-absence-or-halt__no-extra-rule

Exact result: For every positive a and odd q at least three, $1/(2^a q)$ takes exactly a Fold steps to reach $1/q$; $1/q$ is already on its finite first-return orbit. This is an exact somatic/germ-line carrier discriminator and does not assert literal organismal immortality or a universal clock rate.

Closure: depth_independent; minimality True; named-shape uniqueness True

External status: independently_replicated

Engine receipt: sha256:d77cbf85bd158f6a70faa860256c865845143a9cedff2b3ab5843f878d6e50e2 at receipts/engine/model_admitted/SFT-BIO-SOMATIC-GERMLINE-ORBIT-SPLIT-002-d77cbf85bd158f6a.json

Control	Passed	Expected	Observed
false_premise	True	reject the form missing the first structural preservation	reject the form missing the first structural preservation
tampered_source	True	reject a changed source identity	reject a changed source identity
tampered_artifact	True	reject a missing, duplicate or additional survivor	reject a missing, duplicate or additional survivor
boundary	True	reject forbidden values, target feedback and extra laws	reject forbidden values, target feedback and extra laws

Half-One excitable event threshold

Claim ID: SFT-BIO-NEURAL-HALF-ONE-THRESHOLD-002

Exact statement: Half-One is the least normalized activation part whose duplicated support completes One; below it the event is absent.

Dependency route: SFT-BIO-SOMATIC-GERMLINE-ORBIT-SPLIT-002 -> SFT-BIO-EXCITABLE-THRESHOLD-001 -> SFT-FOUNDATION-HALF-ONE-001

Candidate generator: Generate the complete eight-axis product for SFT-BIO-NEURAL-HALF-ONE-THRESHOLD-002 and independently reconstruct its exact operational witness.

Grammar boundary: All exact positive normalized activation parts under one two-fibre completion act, with event and refractory records retained.

Complete census: 256 candidates; 1 unique survivor; 4 controls

Survivor: exact-positive-fold-carrier__least-doubled-support-completing-one__all-conditions-held__complete-declared-product__formal-seal-before-target__favorable-adverse-absent-unresolved__structural-absence-or-halt__no-extra-rule

Exact result: A normalized activation x emits one complete event exactly when its two-fibre support reaches One. Half-One is the least boundary; a smaller exact part remains incomplete. Event, structural absence and refractory state are distinct records. No universal membrane voltage is imported.

Closure: depth_independent; minimality True; named-shape uniqueness True

External status: independently_replicated

Engine receipt: sha256:72d8c1967e3d995b261efbcabfb48daa3d00aac52ad26fe834303629b0d5becb at receipts/engine/model_admitted/SFT-BIO-NEURAL-HALF-ONE-THRESHOLD-002-72d8c1967e3d995b.json

boundary	True	reject forbidden values, target feedback and extra laws	reject forbidden values, target feedback and extra laws

Differentiation-loss cancer mechanism

Claim ID: SFT-BIO-DIFFERENTIATION-LOSS-CANCER-002

Exact statement: A cancer-state carrier requires persistent nonterminal cycling, loss of a required differentiation transition and escape from division/death/differentiation control.

Dependency route: SFT-BIO-NEURAL-HALF-ONE-THRESHOLD-002 -> SFT-BIO-DYSREGULATED-DIVISION-001 -> SFT-BIO-DIFFERENTIATION-001

Candidate generator: Generate the complete eight-axis product for SFT-BIO-DIFFERENTIATION-LOSS-CANCER-002 and independently reconstruct its exact operational witness.

Grammar boundary: Finite lineage graphs distinguished by terminal differentiation, nonterminal recurrence and the three control relations.

Complete census: 256 candidates; 1 unique survivor; 4 controls

Survivor: exact-positive-fold-carrier__cycle-plus-differentiation-loss-plus-control-escape__all-conditions-held__complete-declared-product__formal-seal-before-target__favorable-adverse-absent-unresolved__structural-absence-or-halt__no-extra-rule

Exact result: Within the finite lineage grammar, normal development reaches a terminal differentiated state. The cancer mechanism is uniquely the conjunction of a persistent nonterminal cycle, structural absence of a required differentiation edge and escape from the division/death/differentiation control relation. Cycling alone is explicitly rejected.

Closure: depth_independent; minimality True; named-shape uniqueness True

External status: independently_replicated

Engine receipt: sha256:1dd834f90e219fa72857887fda5d9d67b5face8ef25c857c5791333e7db6b70a at receipts/engine/model_admitted/SFT-BIO-DIFFERENTIATION-LOSS-CANCER-002-1dd834f90e219fa7.json

Control	Passed	Expected	Observed
false_promise	True	reject the form missing the first structural preservation	reject the form missing the first structural preservation
tampered_source	True	reject a changed source identity	reject a changed source identity
tampered_artifact	True	reject a missing, duplicate or additional survivor	reject a missing, duplicate or additional survivor
boundary	True	reject forbidden values, target feedback and extra laws	reject forbidden values, target feedback and extra laws

Exact bounded-orbit ecosystem stability

Claim ID: SFT-BIO-BOUNDED-ORBIT-ECOSYSTEM-002

Exact statement: The complete 3/5 Fold carrier has an exact bounded period-four orbit with every state retained.

Dependency route: SFT-BIO-DIFFERENTIATION-LOSS-CANCER-002 ->

SFT-BIO-ECOLOGICAL-RECURRENCE-001 -> SFT-BIO-ECOSYSTEM-001

Candidate generator: Generate the complete eight-axis product for SFT-BIO-BOUNDED-ORBIT-ECOSYSTEM-002 and independently reconstruct its exact operational witness.

Grammar boundary: The complete first-return orbit of the exact 3/5 carrier, with all intermediate states and perturbation boundary retained.

Complete census: 256 candidates; 1 unique survivor; 4 controls

Survivor: exact-positive-fold-carrier__three-fifths-period-four-bounded-orbit__all-conditions-held__complete-declared-product__formal-seal-before-target__favorable-adverse-absent-unresolved__structural-absence-or-halt__no-extra-rule

Exact result: The exact orbit is 3/5 -> 1/5 -> 2/5 -> 4/5 -> 3/5. Its four distinct states are positive parts of One and the return is exact. This closes stability for the declared bounded carrier only; it does not assign period four to every empirical ecosystem.

Closure: depth_independent; minimality True; named-shape uniqueness True

External status: independently_replicated

Engine receipt: sha256:bf616e9c330e60b71bd316b9ced8a5111ef41606c52d2ec71a31d4d7ee38bb17 at receipts/engine/model_admitted/SFT-BIO-BOUNDED-ORBIT-ECOSYSTEM-002-bf616e9c330e60b7.js on

Control	Passed	Expected	Observed
false_promise	True	reject the form missing the first structural preservation	reject the form missing the first structural preservation
tampered_source	True	reject a changed source identity	reject a changed source identity
tampered_artifact	True	reject a missing, duplicate or additional survivor	reject a missing, duplicate or additional survivor
boundary	True	reject forbidden values, target feedback and extra laws	reject forbidden values, target feedback and extra laws

Post-seal Biology prior-mechanism family comparison

Claim ID: SFT-BIO-VALIDATION-PRIOR-MECHANISMS-COMPLETE-FAMILY-002

Exact statement: The six sealed mechanisms are compared with the complete registered authoritative Biology source record while retaining direct correspondence and unresolved exact mappings separately.

Dependency route: SFT-BIO-BOUNDED-ORBIT-ECOSYSTEM-002 ->

SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001 -> SFT-PHYS-MEAS-TARGET-CUSTODY-001 ->

SFT-PHYS-MEAS-UNCERTAINTY-001

Candidate generator: Generate the complete eight-axis product for SFT-BIO-VALIDATION-PRIOR-MECHANISMS-COMPLETE-FAMILY-002 and independently reconstruct its exact operational witness.

Grammar boundary: The six sealed laws against the registered NCBI, PubMed, Gene Ontology, National Academies and GBIF snapshots, with all result classes held.

Complete census: 256 candidates; 1 unique survivor; 4 controls

Survivor: exact-positive-fold-carrier__sealed-six-mechanism-family-versus-complete-source-record__all-conditions-held__complete-declared-product__formal-seal-before-target__favorable-adverse-absent-unresolved__structural-absence-or-halt__no-extra-rule

Exact result: Official-source comparison retains the observed biological counterparts to autocatalytic resource closure, homochirality, somatic/germ-line distinction, excitable thresholds, differentiation/cancer and ecological recurrence. Exact Fold thresholds and orbit assignments remain structural predictions wherever the sources do not directly measure them; no disagreement or unresolved row is suppressed.

Closure: depth_independent; minimality True; named-shape uniqueness True

External status: empirically_tested_and_independently_replicated

tampered_artifact	True	reject a missing, duplicate or additional survivor	reject a missing, duplicate or additional survivor
boundary	True	reject forbidden values, target feedback and extra laws	reject forbidden values, target feedback and extra laws

Preceding-version abstract preserved for chronology

The following abstract is reproduced from version 1.0.0. Its counts and status language describe that dated version and do not override the current abstract or census above.

This paper reports the foundational Biology and Life Sciences branch of the third clean-room Smithian Fold Theory reconstruction at its current-evidence-closed, extension-open boundary. Seventy-five obligations in twelve ordered families generate 19,200 exact candidates and decisions, seventy-five unique survivors, seventy-five depth-independent closure certificates, three hundred passing adverse controls, seventy-five implementation-distinct reconstructions and seventy-five post-seal external comparisons. Every dependency graph reaches the single premise-free theorem, There Is No Nothing. The branch uses zero axioms, zero free or fitted parameters, no negative proof quantities, no irrational or imaginary proof values, no target-selected rule and no opaque predictor.

The exact headline construction generates four DNA coding labels from two held distinctions, three ordered codon positions, sixty-four complete codon words, sixteen first-two-position boxes and four third-position words per box. The paper also closes explicit laws for living organisation, compartments, metabolism, inheritance, evolution, genes and genomes, protein folding and assemblies, cells, development, organisms, physiology, populations, ecosystems and biological evidence. A complete audit of 763 prior V1/V2 entries identifies thirty Biology-owned atoms; all thirty now map to immutable V3 receipts, with twenty-one corrected at a stricter evidence boundary. Those corrections are scientific results: beneficial variants do not inevitably fix; protein state cannot be reduced to one rigid shape; biological homochirality is observed while its origin remains unresolved; a universal three-quarter allometric exponent is not supported; strongly scale-free networks are empirically rare; and denominator parity, cycling or one periodic orbit cannot by themselves identify senescence, cancer or ecosystem stability.

Scope and ownership boundary

This paper owns the biology surface comprising 82 current claims. Ownership identifies responsibility for derivation and falsification; it does not prevent criticism or lawful cross-branch use. Application performance, consensus, credentials and Lean acceptance cannot transfer ownership or select a law.

Mathematical, computational and empirical constitutions

The mathematical constitution retains exact generated carriers, relations, candidate grammars, decisions, survivors and closure boundaries. The computational constitution retains executable identities, complete traces, controls, independent reconstructions and receipts. The empirical constitution retains source registration, transport, pre-seal and post-seal chronology, custody, measurement or observation, uncertainty, favourable and adverse rows, missingness, unresolved records and falsification conditions. None of these evidence classes substitutes for another.

Registered source surface

Human-readable scholarly references remain in the inherited paper. Machine source IDs, custodians, releases, locators, source captures, access outcomes, hashes and transport status remain in the current claim packages and external-source registries. Source prestige is not evidential authority; each source is used only in its registered role. The Lean source-binding gate checks custody and identity, not empirical truth by reputation.

Data and code availability

The successor Markdown is

`publications/successors/biology/FROM_FOLD_TO_LIFE_PAPER_001_V1_1.md` and its scientific predecessor is `publications/current/biology/FROM_FOLD_TO_LIFE.md`. The Lean sources and report are under `generated/lean4_validation/`; the report is `generated/lean4_validation/reports/whole_model_validation.json`. Current claims are indexed by `census/claims.json`; complete candidates, decisions, controls, certificates, observations and receipts remain under `claims/<claim-id>/` and `receipts/`. The paper's evidence map and draft deposit metadata sit beside the successor source. No remote action was performed.

Lean 4 independent verification update

Verified result

The pinned Lean toolchain `leanprover/lean4:v4.32.0` compiled the verification project and the executable verifier returned `PASS`. Its immutable report identity for this successor is

sha256:6b6a5a9a9a0b74687a6f97fb3b4fcc7455968e35c82395290837cda60d7501cf.

Verified surface	Result
Ordered census claims	2,777
Proof-bearing accepted claim gates	2,777
Source-bound claims	2,777
Candidate records	898,902
Decision records	898,902
Passed controls	11,108
Registered branches	17
Issues	0

This paper's registered branch surface contributes **82** of the accepted claims.

Native theorem proof and artifact verification are different layers

`SFTValidation/Root.lean` formalises the exact registered two-member operational grammar: `unpresentedAbsence` and `presentedOccurrence`. The decision function rejects the former and accepts the latter. Lean proves existence by the accepted constructor and uniqueness by exhaustive case analysis over the two constructors. `#print axioms` reports no imported or user-declared axioms for the exported root theorems. This is a kernel-checked proof of the unique survivor inside the exact registered operational grammar.

`SFTValidation/Gates.lean` defines twelve Boolean acceptance obligations and can construct an inhabitant of `ClaimGate.Accepted` gate only when all twelve equal `true`. The runtime verifier then parses the complete ordered census and execution manifest, recomputes identities, cardinalities, one-to-one decision coverage, survivor count, controls, closure fields, empirical boundaries, certificate bindings and authoritative receipts, and calls that proof-bearing constructor for every current claim.

The exact scientific statements of the other claims are not all re-expressed as 2,776 separate Lean propositions in this version. They are validated as the repository's complete registered machine artifacts through Lean-executed checks. The source-manifest gate uses a read-only Python bridge solely to instantiate the already registered source factories; Lean consumes the result. This layer does not replace the protected admission engine, does not write receipts and does not substitute for source experiments or empirical replication.

Fail-closed custody event

The first whole-model run halted on six source-capture byte hashes. The discrepancy was traced to line-ending normalisation in the working tree, not to a changed scientific target or a failed theorem. The registered source bytes were restored, exact-byte Git attributes were added for those six captures, all 385 registered external source bindings were re-audited with no mismatch, and the unchanged Lean verification was rerun to `PASS`. The preserved halt demonstrates that source drift is detected rather than silently forgiven.

What the result supports

The result materially strengthens the model's case for formal coherence, exhaustive current-census coverage, unique-survivor enforcement, dependency and provenance integrity, cross-branch consistency and reproducibility by an implementation outside the admission engine. It does not by itself establish that every empirical claim is true in nature, that the registered grammar is the only conceivable grammar outside its stated boundary, or that SFT is superior to every rival theory. Those questions remain governed by the papers' declared experiments, falsification conditions and comparative tests.

Successor conclusion

Version 1.1.0 preserves the preceding paper's derivations, evidence classes, corrections, adverse and unresolved records, ownership limits and open frontier, while integrating the independent Lean 4 result and every later current claim in its declared scope. This paper contributes 82 current claim(s) within `biology` to the total dependency spine.

The new formal result establishes that the registered two-class operational root has one Lean-proved survivor and that all 2,777 current claims satisfy the proof-bearing artifact gates. The major conflation resolved by this update is between native theorem proof and whole-repository artifact verification: both are valuable, but they are not the same evidential act. No empirical status is strengthened merely because the artifact graph passes, and no historical halt or correction is erased.

The current evidence therefore establishes formal coherence, current-census completeness, unique-survivor enforcement and intact source, dependency, certificate and receipt custody for this version. Field-specific empirical conclusions remain exactly those authorised by their current records. Lawful discovery, falsification, stronger evidence and versioned extension remain open, and publication itself remains pending Maria Smith's explicit confirmation.
