An Exact, Zero-Parameter and Machine-Closed Reconstruction of Earth and Environmental Sciences from Smithian Fold Theory

Author: Maria Smith, independent researcher and founder, Ernos Labs

Publication authority: Maria Smith

Version: 1.1.0

Date: 2 August 2026

Status: Final local publication candidate; not approved, deposited or published

Preceding version: 1.0.0, preserved unchanged at
publications/current/earth_environment/FROM_ONE_WORLD_TO_EARTH.md

Preceding DOI record(s): [10.5281/zenodo.21640810](https://doi.org/10.5281/zenodo.21640810)

Successor DOI: Pending the authorised new-version or new-record deposit; no identifier has been invented

Paper and documentation licence: CC BY 4.0

Repository code licence: Apache-2.0

Publication control. <i>This is a new versioned successor. It does not rewrite</i>
<i>the preceding paper, its DOI record, historical receipts or evidence. No push,</i>
<i>upload, DOI action, release or publication is authorised until Maria Smith</i>
<i>explicitly confirms the exact final files and hashes.</i>
Lean verification integration. <i>The current SFT ordered census passed the</i>
<i>independent Lean 4 verification layer on 2 August 2026: 2,777 accepted claims,</i>
<i>898,902 candidate records and decisions, 11,108 controls, seventeen branches</i>
<i>and no reported issue. Lean natively proves the two-class operational root and</i>
<i>its unique survivor and constructs proof-bearing acceptance-gate certificates.</i>
<i>The remaining claim content is checked as the complete registered artifact</i>
<i>graph; that distinction is retained throughout this successor.</i>

Abstract

This successor presents the complete current `earth_environment` paper surface: 75 live model-admitted claims, 19,200 generated candidates, 75 unique survivors and 300 passed controls. It integrates 1 claim section(s) not present in the preceding abstract's dated surface and remains complete only to this versioned registered census, with lawful extension open. The independent Lean 4 layer returned PASS for this surface as part of all 2,777 current claims.

The foundation reconstructs Earth-system identity, reservoirs, boundaries, stocks, flows, energy and matter ledgers, geological order and history, interior and geodynamic carriers, rupture and seismic records, volcanism, water and ice, atmosphere, weather, ocean, climate, biogeochemical cycling, environmental transport and quality, observational evidence classes and hazard handoffs. It explicitly distinguishes observation from retrieval, proxy, reconstruction, model and forecast; observed absence from non-detection, censoring and missingness; stock from flow; hazard from risk; and universal upstream law from contingent Earth history.

The quantitative headline is a pre-source exponent prediction for earthquake magnitude-frequency counts. Exact candidate enumeration uniquely selected exponent 1. The first global 2010-2020 mixed-magnitude catalogue was adverse: $N \geq 5/N \geq 6 = 18469/1494$ and its registered exceedance interval $0.076998990840681139-0.084918164588559525$ excludes 1/10. That result remains adverse and unreclassified. A separately preregistered homogeneous 2020-2026 mww holdout returned $N \geq 6/N \geq 7 = 253/27$, or 27/253 exceedance; its interval $0.085657503235220589-0.13089188889528297$ contains 1/10. The branch also derives bounded distinct Earth-ionosphere recurrence modes without importing a dimensional frequency and derives a two-basin tipping

structure while rejecting a universal physical half-threshold.

All 356 V1 rows and 407 V2 steps were atomically reviewed. The three Earth-owned prior questions are all reconciled to current receipts. Twenty-one post-seal external source identities contribute ninety-one preregistered features: sixty-seven are present and twenty-four are absent and preserved. One original failed transport remains recorded; an independently preregistered alternate transport is an addendum, not a silent replacement.

Formal admission, implementation validation, observation, measurement, empirical support, confirmation, adverse evidence, unresolved evidence and publication status remain separate classifications. Lean does not reclassify an empirical result, repair an adverse observation or convert a later comparison into an earlier prediction. Lawful criticism, falsification and versioned extension remain open.

Successor headline findings

1. **Independent whole-model result.** Lean 4 returned `PASS` for 2,777/2,777 current claims, 898,902 candidates and decisions, 11,108 controls and all 17 branches, with no issue.
2. **Operational root.** The exact registered two-class grammar is formalised natively, and `presentedOccurrence` is proved to be its unique survivor without an imported or user-declared axiom in the exported theorem's axiom audit.
3. **Typed validation.** The root and generic acceptance implications are native Lean theorems; the remaining scientific claims are checked as complete registered artifacts. Empirical truth is not inferred from proof-assistant acceptance alone.
4. **Fail-closed custody.** A six-file byte-identity mismatch halted the first run. Exact registered bytes were restored, all 385 source bindings were re-audited, and the unchanged verifier then passed.
5. **Current paper surface.** This successor accounts for all 75 current claim(s) in its declared branch ownership boundary; 1 later claim section(s) are integrated in the successor supplement.
6. **Newly integrated results.** `SFT-EARTH-TIPPING-FOLD-LOCK-002` - Normalized Earth tipping Fold lock.

These findings supplement rather than erase the branch-specific headline results retained below. Any adverse, corrected, unresolved, unavailable or chronology-bound result in the preceding scientific record remains governed by its current claim package.

Current status, evidence language and reader map

Status field	Current position
Paper and completion boundary	75 current claims in the declared branch surface. Completion is dated to the current registered census and remains open to lawful versioned extension.
Formal status	The Lean root theorem is kernel checked. Every live model claim has a current admitted receipt and passed the Lean artifact gates. Formal admission does not imply empirical confirmation.
Empirical status	Claim specific. Blind, non-blind, development-observed, holdout, favourable, adverse, null, missing, unavailable, disputed and unresolved distinctions remain exactly as recorded.
Chronology	Claim-specific registration, sealing, custody and observation order controls. Later evidence never becomes an earlier prediction without the registered chronology.
Publication status	Version 1.1.0 is a final local publication candidate awaiting Maria Smith's approval. It is not deposited or published.
Ownership	This paper retains its declared scientific boundary. Lean verification creates no new branch ownership and no application may select a law.
What is not claimed	Permanent closure of science, universal empirical confirmation, conversion of compatibility into confirmation, or superiority to every rival model.

Corpus-wide terminology and evidence key

Term	Reserved meaning in this paper
Theorem	A formally closed proposition at its declared grammar and dependency boundary.
Law	An admitted branch relation with its declared carrier, boundary, dependencies and extension rule.
Claim	The registered unit judged by the engine and bound to one immutable receipt.
Constitution	The rules governing admissible objects, derivations, evidence and publication; not an empirical result.
Derivation	Generation and elimination of the declared candidate space to its surviving structure.
Prediction	A consequence sealed before the matching target is released under the registered custody protocol.
Observation	A source-bound external record; it does not enter candidate generation.
Measurement	An instrument-, method-, condition- and uncertainty-bound observed value.
Reconstruction	A separately implemented regeneration or an explicitly identified inference of a retained state or history.
Exact numerical correspondence	Equality or registered interval relation between exact numerical objects at the declared boundary.
Structural correspondence	A post-derivation relation between forms without a claim of exact numerical prediction.
Boundary correspondence	Agreement restricted to the named interface, limit or ownership boundary.
Compatibility	Non-adverse but non-discriminating evidence.
Support	Relevant evidence that is not unique confirmation.
Confirmation	Used only when the current registered evidence protocol warrants that classification.
Validation	Successful execution of the named formal, computational or empirical test; its kind must be stated.
Adverse result	A registered test result that conflicts with the tested claim at its declared boundary.
Unresolved result	Required evidence remains unavailable, incomplete, disputed or insufficiently classified.
Implementation identity	The hash-bound identity of executable material; implementation success is not empirical confirmation.
Formal, empirical and publication status	Three independent classifications; none substitutes for another.
Foundational closure	Completion of the registered foundation only; not field-wide closure.
Field-wide closure	Completion of the named frozen or registered dated field census.
Current-evidence closure	Closure only to the evidence surface presently registered and preserved.
Extension openness	New questions may enter a later version without rewriting receipts or history.

Proof language is reserved for formal closure; derivation for generated structure; implementation for executable demonstration; prediction for a correctly sealed prospective consequence; observation and measurement for source-bound external records; reconstruction for separately regenerated or inferred states; correspondence for post-derivation relations; compatibility and support for non-unique evidence; confirmation only where the registered protocol authorises it; adverse for conflict; and unresolved where required evidence remains incomplete.

Three reading levels

1. **Conceptual paper.** The abstract, headline findings, branch narrative, major derivations, evidence synthesis, limitations and conclusion provide the readable scientific argument.
2. **Scientific audit layer.** Family and claim sections preserve exact status, dependencies, candidate and survivor counts, controls, chronology, sources, corrections, adverse evidence and reconciliation.
3. **Machine archive.** The repository packages preserve complete candidates, decisions, hashes, receipts, executable traces, source snapshots and certificates. They remain authoritative where prose abbreviates display.

Editorial change control

This successor improves currency, expression, typography and navigation. It does not change scientific meaning, chronology, evidence class, branch ownership, claim status or machine identity. Any conflict between authoritative records must be resolved by explicit supersession or reported to Maria Smith; prose alone cannot manufacture agreement.

Results first: the Earth findings

Headline result	Exact or bounded result	Scientific meaning
Complete foundational closure	74 laws; 18,944 candidates; 74 sole survivors; 296 passing controls	Every foundation obligation has a root trace, unique survivor, independent reconstruction, empirical comparison and immutable receipt.
Earth-system object	bounded joint reservoirs, interfaces, state, scale and time	A convenient variable set cannot silently become the Earth system.
Observation and absence	direct, retrieval, proxy, reconstruction, model and forecast are distinct; absence, non-detection, censoring, missingness and outside-scope are distinct	The symbol 0 may represent declared absence, never ordinary nothing or an unknown value.
Planetary ledger	source + storage change + transfer + export retained at a declared boundary	Conservation cannot be manufactured by deleting or fitting a residual.
Geological history	positive ordered layers plus explicit contacts, interruptions, dates and alternatives	Historical reconstruction preserves gaps instead of converting them into a smooth continuum.
Earthquake size-frequency exponent	unique structural exponent 1; mixed catalogue adverse 18469/1494; homogeneous holdout 253/27	The prediction precedes data; adverse and favourable results coexist without reclassification.
Earth-ionosphere recurrence	bounded carrier forces distinct modes; dimensional frequency remains measured	The model predicts mode structure without fitting a hertz value.
Earth-system tipping	exact two-basin/shared-image witness; no universal physical 1/2 threshold	Fold structure does not overwrite contingent environmental thresholds.
Climate evidence	weather, climate, forcing, feedback, variability and attribution retain timescale and comparison records	Model or forecast output cannot substitute for observation.
Environmental risk	hazard, exposure, vulnerability, capacity and consequence remain separate	Earth science hands social, medical and engineering consequences across explicit boundaries.

Status and scope

PUBLISHED OPEN-ACCESS BRANCH PAPER. The canonical release contains this Markdown paper, its rendered PDF, the evidence/source archive and checksum ledger.

Foundational closure means every question in the frozen seventy-four-obligation Layer One surface has one engine-admitted theorem inside its declared exact grammar, with a complete root path, adverse controls, independent reconstruction and purpose-matched post-seal comparison. It does not claim the complete Layer Two reconstruction of every Earth discipline and it does not permanently lock the branch. Lawful extensions remain open through the same public engine.

Public scientific mission and admission boundary

Ernos Labs is an open-source science movement, verification platform and public tree of knowledge founded by Maria Smith. Its purpose is not to replace one authority with another. It is to make scientific authority narrow, inspectable and revocable: a claim is admitted only through its complete derivation chain, generated alternatives, eliminations, unique survivor, adverse controls, measurement custody where applicable and unchanged-engine receipt. Open criticism is unrestricted and necessary; scientific admission is the separate machine-checked act of satisfying that public standard.

Maria Smith developed Smithian Fold Theory outside formal academic education, institutional research employment and conventional grant funding. That fact is not offered as evidence for a theorem; the derivations and observations carry the entire scientific burden. It is evidence about access. A credential-first system loses more than individual opportunity: it loses unknown questions, methods and discoveries from minds that capital and status never authorise. This work therefore treats Maria Smith's authorship neither as exceptionalism nor as a reason for dismissal, but as an indictment of every scientific contribution lost when financial gatekeeping is presented as rigour.

The institutional argument is empirical, not a claim that every institution or funded researcher acts in bad faith. Published studies document sponsor-linked differences in outcomes and conclusions, commercial influence over research agendas, limits and sensitivities in grant review, underpublication of null results, and inequalities created by paywalls and article-processing charges. Those findings establish that funding, prestige, publication and consensus are selection systems with incentives and failure modes. They cannot substitute for a public proof and evidence chain. Expertise, measurement and adversarial review remain indispensable; institutional permission does not select a fundamental law.

For Earth and environmental science, an expensive sensor, institutional model, consensus map, forecast score or proprietary data product cannot select a natural law. Field observation, instrument output, retrieval, interpolation, proxy reconstruction,

simulation, assimilation and forecast remain separate evidence classes unless a separately derived and tested bridge connects them. Public source and method custody are conditions of admission, not optional documentation.

Maria Smith retains copyright and scientific authorship. Papers and documentation are licensed CC BY 4.0 and code is licensed Apache-2.0, permitting inspection, copying, criticism, reproduction, modification and redistribution with attribution. "Ernos Labs" is a separate, revocable standards-conformance designation. A reuse or fork may use the open work under its licences, but may describe itself as Ernos Labs only while it preserves the public empirical constitution, complete adverse evidence, unchanged admission route, critical review and community standards.

Independent replications, lawful extensions, corrections and attempted invalidations are invited. Credentials cannot rescue a failed gate and lack of credentials cannot prevent a reproducible result from being evaluated. Contact Maria.Smith.Sftoe@gmail.com, submit through <https://discord.gg/ucwGryVxGr>, or inspect the public project at <https://github.com/MettaMazza>.

This position rejects paywalls, credential gates and opaque oracles as substitutes for transparent derivation and inspectable evidence. It does not reject expertise; it requires expertise to remain reproducible and publicly answerable.

Method: one root, one unchanged engine, no target-selected law

The derivational root is There Is No Nothing. The One and Fold, exact arithmetic, information, computation, physics, chemistry, materials and biology enter only through already admitted dependencies. Before any external source identity or outcome was opened, the branch froze seventy-four claims, eight binary preservation axes per claim, 18,944 candidates, all predicted consequence labels and falsification conditions. Each literal 256-form product is complete by construction. One form alone preserves carrier, boundary, relation, record, evidence class, provenance, positive-finite successor closure and absence of an extra rule.

The capability-closed predictor cannot access the filesystem, network, clock, environment, subprocess or target. A distinct custodian releases the source-derived target only after the derivation seal. Every claim is reconstructed by a separate implementation. Four mandatory structural controls reject a false premise, changed source identity, changed candidate artifact and boundary violation. The canonical engine and verification-authority seals were checked before, during and after admission and were not edited.

External evidence constitution

The sources were chosen after the complete derivation seal by question-purpose and authoritative or primary custody. Their ninety-one features were preregistered before capture outcomes. Sixty-seven appeared in the captured surfaces. Twenty-four did not and remain absent. The original Smithsonian transport returned HTTP 403 and remains a failed row; a separately registered WFS addendum succeeded without rewriting it. Earth evidence tests declared consequence boundaries and one exact numerical prediction. It does not select any structural survivor.

V1/V2 atomic reconciliation

The accountability audit reviewed all 763 registered V1/V2 entries. It isolated three Earth-owned questions: Earth-ionosphere recurrence, Earth-system tipping and earthquake magnitude-frequency. All three map to current V3 receipts. Prior answers were never admitted as V3 premises; they ensured that the clean reconstruction did not omit known earlier work.

Reading the exhaustive derivation ledger

Each of the seventy-four sections below states its theorem, receipt dependencies, complete eight-axis grammar, 256-form census, sole survivor, depth-independent base and successor, operational witnesses, scientific meaning, four adverse controls, independent implementation, external evidence scope, complete feature accounting, falsification boundary and immutable evidence identities.

Ledger family 1: Earth-System Identity, Reservoirs, Boundaries and Observation

Earth science begins with a bounded joint carrier, not a map label. Reservoirs, interfaces, state, time, scale and observation class remain explicit. Detected absence, non-detection, censoring, missingness and outside-scope status are different records; the symbol 0 may represent declared absence but may not silently convert an unknown or missing observation into ordinary numerical nothing.

1. Earth-system identity

Claim identity: SFT-EARTH-SYSTEM-001

Question and exact theorem. The Earth system is a declared joint organization of distinguishable reservoirs and interfaces whose state, boundary, scale and observation time remain explicit.

```
nested-earth-reservoir-interface-carrier__earth-state-observation-bounded__bounded
-joint-state-continuation__reservoirs-interfaces-time-and-scale-held__evidence-cla
ss-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-row
s__no-extra-rule
```

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-ONE-001
- SFT-FOUNDATION-FOLD-001
- SFT-FOUNDATION-FOLD-DYNAMICS-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-PROBABILITY-STATISTICS-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-MATH-CATEGORY-TYPE-COMPOSITION-001
- SFT-INFO-QUANTITY-001
- SFT-INFO-ENTROPY-UNCERTAINTY-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-COMP-FORM-STATE-TRANSITION-001
- SFT-COMP-FORM-COMPOSITION-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-THERMO-FIRST-LAW-001
- SFT-PHYS-THERMO-SECOND-LAW-001
- SFT-PHYS-FLUID-CONSERVATION-001
- SFT-PHYS-WAVE-PROPAGATION-001
- SFT-CHEM-MEAS-SUBSTANCE-001
- SFT-CHEM-STOICH-CONSERVATION-001

- SFT-CHEM-PHASE-CHEMICAL-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-THERM-CONDUCTION-001
- SFT-BIO-ECOSYSTEM-001
- SFT-BIO-BIO-HANDOFF-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	nested-earth-reservoir-interface-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	earth-state-observation-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	bounded-joint-state-continuation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	reservoirs-interfaces-time-and-scale-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: nested-earth-reservoir-interface-carrier__earth-state-observation-bounded__bounded-joint-state-continuation__reservoirs-interfaces-time-and-scale-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.

- `evidence-boundary`: the evidence boundary remains distinct from the result carrier; passed `true`.
- `exact-fold-witness`: the family's pre-source exact Fold construction reproduces; passed `true`.

Scientific meaning. The theorem supplies the minimum complete Earth-system object: named reservoirs plus interfaces, state, scale and time. It prevents a convenient variable list from being mistaken for the system it samples.

Earth science begins with a bounded joint carrier, not a map label. Reservoirs, interfaces, state, time, scale and observation class remain explicit. Detected absence, non-detection, censoring, missingness and outside-scope status are different records; the symbol 0 may represent declared absence but may not silently convert an unknown or missing observation into ordinary numerical nothing.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:d964ab5226181573a69b73cdc11e095774d221c3d5b038139a3d125c96509712.
- `tampered_source`: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt

2. Earth-system reservoir

Claim identity: SFT-EARTH-RESERVOIR-001

Question and exact theorem. An Earth reservoir is a source- and time-bounded carrier with explicit membership, stored quantity, interfaces and observation units.

bounded-stock-membership-carrier__reservoir-definition-bounded__membership-storage
 -and-transfer-relation__members-stock-units-boundary-and-time-held__evidence-class
 -explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows_
 _no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-ONE-001
- SFT-FOUNDATION-FOLD-001
- SFT-FOUNDATION-FOLD-DYNAMICS-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-PROBABILITY-STATISTICS-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-MATH-CATEGORY-TYPE-COMPOSITION-001
- SFT-INFO-QUANTITY-001
- SFT-INFO-ENTROPY-UNCERTAINTY-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-COMP-FORM-STATE-TRANSITION-001
- SFT-COMP-FORM-COMPOSITION-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-THERMO-FIRST-LAW-001
- SFT-PHYS-THERMO-SECOND-LAW-001
- SFT-PHYS-FLUID-CONSERVATION-001
- SFT-PHYS-WAVE-PROPAGATION-001
- SFT-CHEM-MEAS-SUBSTANCE-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-PHASE-CHEMICAL-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-THERM-CONDUCTION-001
- SFT-BIO-ECOSYSTEM-001
- SFT-BIO-BIO-HANDOFF-001
- SFT-EARTH-SYSTEM-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	bounded-stock-membership-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	reservoir-definition-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	membership-storage-and-transfer-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	members-stock-units-boundary-and-time-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: bounded-stock-membership-carrier__reservoir-definition-bounded__membership-storage-and-transfer-relation__members-stock-units-boundary-and-time-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.
- evidence-boundary: the evidence boundary remains distinct from the result carrier; passed true.
- exact-fold-witness: the family's pre-source exact Fold construction reproduces; passed true.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar.

Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Earth science begins with a bounded joint carrier, not a map label. Reservoirs, interfaces, state, time, scale and observation class remain explicit. Detected absence, non-detection, censoring, missingness and outside-scope status are different records; the symbol 0 may represent declared absence but may not silently convert an unknown or missing observation into ordinary numerical nothing.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

4. Earth-system state

Claim identity: SFT-EARTH-STATE-001

Question and exact theorem. An Earth-system state is the complete registered assignment of stocks, relations and observation status at one declared time and scale.

time-indexed-complete-reservoir-carrier__registered-state-vector-bounded__stock-re
 lation-state-assignment__stocks-relations-missingness-and-time-held__evidence-clas
 s-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows
 __no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-ONE-001
- SFT-FOUNDATION-FOLD-001
- SFT-FOUNDATION-FOLD-DYNAMICS-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001

- SFT-PHYS-FLUID-CONSERVATION-001
- SFT-PHYS-WAVE-PROPAGATION-001
- SFT-CHEM-MEAS-SUBSTANCE-001
- SFT-CHEM-STOICH-CONSERVATION-001

- SFT-CHEM-PHASE-CHEMICAL-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-THERM-CONDUCTION-001
- SFT-BIO-ECOSYSTEM-001
- SFT-BIO-BIO-HANDOFF-001
- SFT-EARTH-BOUNDARY-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	time-indexed-complete-reservoir-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	registered-state-vector-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	stock-relation-state-assignment	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	stocks-relations-missingness-and-time-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: time-indexed-complete-reservoir-carrier__registered-state-vector-bounded__stock-relation-state-assignment__stocks-relations-missingness-and-time-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.

- `relation-distinct`: the carrier and relation are not silently conflated; passed `true`.
- `evidence-boundary`: the evidence boundary remains distinct from the result carrier; passed `true`.
- `exact-fold-witness`: the family's pre-source exact Fold construction reproduces; passed `true`.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar. Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Earth science begins with a bounded joint carrier, not a map label. Reservoirs, interfaces, state, time, scale and observation class remain explicit. Detected absence, non-detection, censoring, missingness and outside-scope status are different records; the symbol 0 may represent declared absence but may not silently convert an unknown or missing observation into ordinary numerical nothing.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:7431d9892b043b7a6a283d05d0a6b4f57016fbbd01a700419e5224f1812d41eb.

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	complete-observation-status-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	detection-boundary-declared	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	status-class-distinction	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	detected-absent-censored-missing-outside-scope-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: complete-observation-status-carrier__detection-boundary-declared__status-class-distinction__detected-absent-censored-missing-outside-scope-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.
- evidence-boundary: the evidence boundary remains distinct from the result carrier; passed true.
- exact-fold-witness: the family's pre-source exact Fold construction reproduces; passed true.

Scientific meaning. The symbol 0 is lawful only as an explicit representation of observed absence at a declared detection boundary. Missing, censored, unobserved and outside-scope rows remain distinct and halt any computation that tries to substitute ordinary zero for them.

Earth science begins with a bounded joint carrier, not a map label. Reservoirs, interfaces, state, time, scale and observation class remain explicit. Detected absence, non-detection, censoring, missingness and outside-scope status are different records; the symbol 0 may represent declared absence but may not silently convert an unknown or missing observation into ordinary numerical nothing.

Adverse controls.

Ledger family 2: Planetary Energy, Matter and Information Budgets

A planetary budget is a complete bounded ledger. Stock, flow, source, sink, storage, transformation and export are separate coordinates. Closure can be tested only after units, time intervals, interfaces, missing terms and residuals are retained; a fitted residual cannot manufacture conservation.

7. Earth-system energy budget

Claim identity: SFT-EARTH-ENERGY-BUDGET-001

Question and exact theorem. An Earth energy budget retains every registered source, storage change, transfer and export across a declared boundary before testing closure.

```
bounded-energy-stock-transfer-carrier__budget-resolution-bounded__source-storage-t
ransfer-loss-balance__all-terms-units-boundaries-and-times-held__evidence-class-ex
plicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no
-extra-rule
```

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: species-resolved-stock-transfer-carrier__matter-domain-bounded__source-storage-transformation-export-balance__species-phase-location-time-and-uncertainty-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.

- `relation-distinct`: the carrier and relation are not silently conflated; passed `true`.
- `evidence-boundary`: the evidence boundary remains distinct from the result carrier; passed `true`.
- `exact-fold-witness`: the family's pre-source exact Fold construction reproduces; passed `true`.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar. Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

A planetary budget is a complete bounded ledger. Stock, flow, source, sink, storage, transformation and export are separate coordinates. Closure can be tested only after units, time intervals, interfaces, missing terms and residuals are retained; a fitted residual cannot manufacture conservation.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:55373db81cbf333fd9a5710d82f8c1c02110ab7c3bd2f80e29c8714c9b55b4a4.

9. Earth-system information budget

Claim identity: SFT-EARTH-INFORMATION-BUDGET-001

Question and exact theorem. An Earth information budget records which environmental distinctions are retained, merged, reconstructed or lost by observation and transformation.

distinction-observation-transformation-carrier__observation-process-bounded__retention-loss-and-reconstruction-relation__source-resolution-processing-and-lost-labels-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-ONE-001
- SFT-FOUNDATION-FOLD-001
- SFT-FOUNDATION-FOLD-DYNAMICS-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-BIO-ECOSYSTEM-001
- SFT-BIO-BIO-HANDOFF-001
- SFT-EARTH-ABSENCE-MISSINGNESS-001
- SFT-EARTH-MATTER-BUDGET-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	distinction-observation-transformation-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	observation-process-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	retention-loss-and-reconstruction-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	source-resolution-processing-and-lost-labels-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: `distinction-observation-transformation-carrier_observation-process-bounded_retention-loss-and-reconstruction-relation_source-resolution-processing-and-lost-labels-held_evidence-class-explicit_root-bound-forward-forcing_positive-finite-successor-retains-all-rows_no-extra-rule`.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier-present`: the claim retains a nonempty named carrier; passed `true`.
- `relation-distinct`: the carrier and relation are not silently conflated; passed `true`.
- `evidence-boundary`: the evidence boundary remains distinct from the result carrier; passed `true`.

11. Source, sink and storage roles

Claim identity: SFT-EARTH-SOURCE-SINK-STORAGE-001

Question and exact theorem. Source, sink and storage are boundary- and interval-relative roles assigned from the complete transfer record rather than permanent labels attached to an object.

process-reservoir-role-carrier__system-boundary-bounded__boundary-relative-role-as
 signment__direction-duration-capacity-and-reversal-held__evidence-class-explicit__
 root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-r
 ule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-ONE-001
- SFT-FOUNDATION-FOLD-001
- SFT-FOUNDATION-FOLD-DYNAMICS-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-GRAPH-NETWORK-001

- SFT-INFO-QUANTITY-001
- SFT-INFO-ENTROPY-UNCERTAINTY-001

- SFT-INFO-CONSERVATION-LOSS-001
- SFT-COMP-FORM-STATE-TRANSITION-001
- SFT-COMP-FORM-COMPOSITION-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-THERMO-FIRST-LAW-001
- SFT-PHYS-THERMO-SECOND-LAW-001
- SFT-PHYS-FLUID-CONSERVATION-001
- SFT-PHYS-WAVE-PROPAGATION-001
- SFT-CHEM-MEAS-SUBSTANCE-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-PHASE-CHEMICAL-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-THERM-CONDUCTION-001
- SFT-BIO-ECOSYSTEM-001
- SFT-BIO-BIO-HANDOFF-001
- SFT-EARTH-ABSENCE-MISSINGNESS-001
- SFT-EARTH-STOCK-FLOW-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	process-reservoir-role-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	system-boundary-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	boundary-relative-role-assignment	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	direction-duration-capacity-and-reversal-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: process-reservoir-role-carrier__system-boundary-bounded__boundary-relative-role-assignment__direction-duration-capacity-and-reversal-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.
- evidence-boundary: the evidence boundary remains distinct from the result carrier; passed true.
- exact-fold-witness: the family's pre-source exact Fold construction reproduces; passed true.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar.

Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

A planetary budget is a complete bounded ledger. Stock, flow, source, sink, storage, transformation and export are separate coordinates. Closure can be tested only after units, time intervals, interfaces, missing terms and residuals are retained; a fitted residual cannot manufacture conservation.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

Ledger family 3: Geological Material, Layer, Provenance and History

Geological identity requires specimen, composition, phase, texture, provenance and method. Layers are positive ordered carriers with explicit contacts and interruptions. Earth history is a dated multi-proxy reconstruction whose gaps and alternatives remain evidence, not empty numerical entries.

13. Geological material identity

Claim identity: SFT-EARTH-GEOLOGICAL-MATERIAL-001

Question and exact theorem. A geological material is a source-bound specimen class retaining chemical composition, material phases, texture, structure, provenance and observation scale.

```
specimen-composition-phase-texture-carrier__specimen-method-bounded__material-class-equivalence__provenance-mineralogy-chemistry-structure-and-scale-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule
```

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-EARTH-BUDGET-CLOSURE-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	specimen-composition-phase-texture-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	specimen-method-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	material-class-equivalence	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	provenance-mineralogy-chemistry-structure-and-scale-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: specimen-composition-phase-texture-carrier__specimen-method-bounded__material-class-equivalence__provenance-mineralogy-chemistry-structure-and-scale-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.

- `evidence-boundary`: the evidence boundary remains distinct from the result carrier; passed `true`.
- `exact-fold-witness`: the family's pre-source exact Fold construction reproduces; passed `true`.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar. Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Geological identity requires specimen, composition, phase, texture, provenance and method. Layers are positive ordered carriers with explicit contacts and interruptions. Earth history is a dated multi-proxy reconstruction whose gaps and alternatives remain evidence, not empty numerical entries.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

15. Stratigraphic order

Claim identity: SFT-EARTH-STRATIGRAPHIC-ORDER-001

Question and exact theorem. Stratigraphic order is a partial order over observed layers and events that retains unconformities, faults, intrusions and unresolved correlations.

ordered-layer-event-carrier__section-and-correlation-bounded__before-after-and-correlation-relation__contacts-unconformities-intrusions-faults-and-dates-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-ONE-001
- SFT-FOUNDATION-FOLD-001
- SFT-FOUNDATION-FOLD-DYNAMICS-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-GRAPH-NETWORK-001

- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-PROBABILITY-STATISTICS-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001

- SFT-MATH-CATEGORY-TYPE-COMPOSITION-001
- SFT-INFO-QUANTITY-001
- SFT-INFO-ENTROPY-UNCERTAINTY-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-COMP-FORM-STATE-TRANSITION-001
- SFT-COMP-FORM-COMPOSITION-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-THERMO-FIRST-LAW-001
- SFT-PHYS-THERMO-SECOND-LAW-001
- SFT-PHYS-FLUID-CONSERVATION-001
- SFT-PHYS-WAVE-PROPAGATION-001
- SFT-CHEM-MEAS-SUBSTANCE-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-PHASE-CHEMICAL-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-THERM-CONDUCTION-001
- SFT-BIO-ECOSYSTEM-001
- SFT-BIO-BIO-HANDOFF-001
- SFT-EARTH-BUDGET-CLOSURE-001
- SFT-EARTH-GEOLOGICAL-LAYER-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	ordered-layer-event-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	section-and-correlation-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
relation	imported-fitted-or-missing-relation	before-after-and-correlation-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	contacts-unconformities-intrusions-faults-and-dates-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: `ordered-layer-event-carrier__section-and-correlation-bounded__before-after-and-correlation-relation__contacts-unconformities-intrusions-faults-and-dates-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule`.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier-present`: the claim retains a nonempty named carrier; passed `true`.
- `relation-distinct`: the carrier and relation are not silently conflated; passed `true`.
- `evidence-boundary`: the evidence boundary remains distinct from the result carrier; passed `true`.
- `exact-fold-witness`: the family's pre-source exact Fold construction reproduces; passed `true`.

Scientific meaning. Positive ordered layers force a partial history while contacts, unconformities, intrusions and faults preserve the evidence that interrupts simple succession.

Geological identity requires specimen, composition, phase, texture, provenance and method. Layers are positive ordered carriers with explicit contacts and interruptions. Earth history is a dated multi-proxy reconstruction whose gaps and alternatives remain evidence, not empty numerical entries.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:0e64120bb4ed52382f37662c0bd86d9e5c56aed1bc4722064e5679c648a7e3dc.

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	source-path-deposit-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	method-and-basin-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	source-to-observed-material-reconstruction	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	composition-age-route-alteration-and-alternatives-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: source-path-deposit-carrier__method-and-basin-bounded__source-to-observed-material-reconstruction__composition-age-route-alteration-and-alternatives-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier-present`: the claim retains a nonempty named carrier; passed `true`.
- `relation-distinct`: the carrier and relation are not silently conflated; passed `true`.
- `evidence-boundary`: the evidence boundary remains distinct from the result carrier; passed `true`.
- `exact-fold-witness`: the family's pre-source exact Fold construction reproduces; passed `true`.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar.

Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Geological identity requires specimen, composition, phase, texture, provenance and method. Layers are positive ordered carriers with explicit contacts and interruptions. Earth history is a dated multi-proxy reconstruction whose gaps and alternatives remain evidence, not empty numerical entries.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:ca2871a8bf4b75538c8b6457aa4372850a4c864c7b4ba0b3160e8131ef3d31d8.

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	nested-interior-region-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	geophysical-inference-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	boundary-and-property-contrast-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	depth-composition-state-observation-and-uncertainty-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: nested-interior-region-carrier__geophysical-inference-bounded__boundary-and-property-contrast-relation__depth-composition-state-observation-and-uncertainty-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.
- evidence-boundary: the evidence boundary remains distinct from the result carrier; passed true.
- exact-fold-witness: the family's pre-source exact Fold construction reproduces; passed true.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar.

Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Interior compartments and geodynamic relations are inference-bounded. Depth, composition, state, contrast, source, transfer and uncertainty remain reconstructible. Universal mechanics and thermodynamics enter only through prior admitted receipts; Earth-specific observations do not select those laws.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	source-reservoir-thermal-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	thermal-ledger-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	production-storage-transfer-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	source-identity-location-rate-history-and-uncertainty-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.

Post-seal empirical comparison. Directness:

`authoritative_observation_or_primary_measurement_boundary_correspondence`. Disposition: `purpose_matched_authoritative_source_features_present`. Predicted consequence: `earth:temperature-material-motion-carrier__conduction-advection-and-transition-relation__geometry-properties-boundaries-time-and-flux-held__interior-scale-bounded`. Source-derived consequence: `earth:temperature-material-motion-carrier__conduction-advection-and-transition-relation__geometry-properties-boundaries-time-and-flux-held__interior-scale-bounded`. Exact boundary correspondence: `true`. External evidence selected the survivor: `false`. Formal structure relabelled as direct measurement: `false`. Model, forecast, proxy or retrieval relabelled as observation: `false`.

Sources and complete feature accounting:

- EARTHSCOPE-SAGE-SERVICES-001 - NSF SAGE Facility operated by EarthScope Consortium, **Seismological and geophysical web services**; class `authoritative_geophysical_data_service`; transport captured; features 3/4 present; present: station and channel identity, waveform and event access, instrument response; absent and preserved: observed and derived product distinction.

- USGS-GEOMAG-OBSERVATORIES-001 - U.S. Geological Survey Geomagnetism Program, **USGS geomagnetic observatory operations**; class authoritative_geomagnetic_observation_network; transport captured; features 0/4 present; present: none; absent and preserved: observatory identity, time-bounded geomagnetic observation, station status, read-only access.
- USGS-NGMDB-001 - U.S. Geological Survey National Cooperative Geologic Mapping Program, **National Geologic Map Database**; class authoritative_geoscience_archive; transport captured; features 0/4 present; present: none; absent and preserved: spatially referenced geology, map and report provenance, stratigraphic information, geochemistry geophysics palaeontology and geochronology coverage.

Comparison record:

- sft-earth-interior-heat-transport-001-external-earth-evidence: predicted earth:temperature-material-motion-carrier__conduction-advection-and-transition-relation__geometry-properties-boundaries-time-and-flux-held__interior-scale-bounded; source-derived earth:temperature-material-motion-carrier__conduction-advection-and-transition-relation__geometry-properties-boundaries-time-and-flux-held__interior-scale-bounded; exact match True
- source features: 67 present; 24 absent preserved; 91 registered
- the original failed transport and every adverse, absent and unresolved row remain preserved
- a deliberately changed external consequence was rejected

Falsification boundary: Reject if a fitted effective parameter replaces the missing carrier path or if distinct transport modes are silently merged.

Explicit exclusions.

- semantic numerical zero
- negative proof quantity
- irrational or imaginary proof value
- completed infinity
- ungenerated continuum
- free or fitted parameter
- target-selected survivor
- prior answer as premise
- conventional Earth model as premise
- proxy or retrieval relabelled as direct observation
- model or forecast relabelled as observation
- opaque predictor as law
- erased adverse, absent, censored, missing or unresolved row

Immutable evidence identities. Complete pre-source seal

22. Crust-mantle boundary

Claim identity: SFT-EARTH-CRUST-MANTLE-BOUNDARY-001

Question and exact theorem. The crust-mantle boundary is an observation-bounded interface identified through retained composition, structure and propagation contrasts, not a globally uniform surface by premise.

```
solid-earth-interface-carrier__regional-observation-bounded__composition-structure
-and-wave-contrast__depth-lateral-variation-method-and-uncertainty-held__evidence-
class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-
rows__no-extra-rule
```

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-ONE-001
- SFT-FOUNDATION-FOLD-001
- SFT-FOUNDATION-FOLD-DYNAMICS-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-BIO-ECOSYSTEM-001
- SFT-BIO-BIO-HANDOFF-001

- SFT-EARTH-EARTH-HISTORY-001
- SFT-EARTH-INTERIOR-HEAT-TRANSPORT-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	solid-earth-interface-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	regional-observation-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	composition-structure-and-wave-contrast	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	depth-lateral-variation-method-and-uncertainty-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: solid-earth-interface-carrier__regional-observation-bounded__composition-structure-and-wave-contrast__depth-lateral-variation-method-and-uncertainty-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.
- evidence-boundary: the evidence boundary remains distinct from the result carrier; passed true.
- exact-fold-witness: the family's pre-source exact Fold construction reproduces; passed true.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar. Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Interior compartments and geodynamic relations are inference-bounded. Depth, composition, state, contrast, source, transfer and uncertainty remain reconstructible. Universal mechanics and thermodynamics enter only through prior admitted receipts; Earth-specific observations do not select those laws.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

- the original failed transport and every adverse, absent and unresolved row remain preserved
- a deliberately changed external consequence was rejected

Falsification boundary: Reject if a sharp line replaces an observed deformation zone or if motion is inferred without a time-indexed reference frame.

Explicit exclusions.

- semantic numerical zero
- negative proof quantity
- irrational or imaginary proof value

- completed infinity
- ungenerated continuum
- free or fitted parameter
- target-selected survivor
- prior answer as premise
- conventional Earth model as premise
- proxy or retrieval relabelled as direct observation
- model or forecast relabelled as observation
- opaque predictor as law
- erased adverse, absent, censored, missing or unresolved row

Immutable evidence identities. Complete pre-source seal

24. Tectonic motion and deformation

Claim identity: SFT-EARTH-TECTONIC-MOTION-001

Question and exact theorem. Tectonic motion is a reference-frame-bound history of relative displacement and deformation reconstructed from complete geodetic and geological records.

time-indexed-solid-earth-position-carrier__spatial-temporal-window-bounded__relati
 ve-displacement-strain-transition__reference-frame-path-rate-events-and-errors-hel
 d__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-
 retains-all-rows__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-ONE-001
- SFT-FOUNDATION-FOLD-001
- SFT-FOUNDATION-FOLD-DYNAMICS-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-CHEM-PHASE-CHEMICAL-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-THERM-CONDUCTION-001
- SFT-BIO-ECOSYSTEM-001
- SFT-BIO-BIO-HANDOFF-001
- SFT-EARTH-EARTH-HISTORY-001
- SFT-EARTH-PLATE-BOUNDARY-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	time-indexed-solid-earth-position-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	spatial-temporal-window-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	relative-displacement-strain-transition	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	reference-frame-path-rate-events-and-errors-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: time-indexed-solid-earth-position-carrier__spatial-temporal-window-bounded__relative-displacement-strain-transition__reference-frame-path-rate-events-and-errors-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.
- evidence-boundary: the evidence boundary remains distinct from the result carrier; passed true.
- exact-fold-witness: the family's pre-source exact Fold construction reproduces; passed true.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar.

Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Interior compartments and geodynamic relations are inference-bounded. Depth, composition, state, contrast, source, transfer and uncertainty remain reconstructible. Universal mechanics and thermodynamics enter only through prior admitted receipts; Earth-specific observations do not select those laws.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:d6dd33b4e48c2ca5a77829a2f4e033878be3a776d721c12fde1fbb154a893678.
- tampered_source: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt

Ledger family 5: Stress, Rupture, Seismicity and Volcanism

Stress, strain, rupture, waves, catalogue construction and volcanism remain distinct. The exact size-count grammar enumerates exponents before data. A heterogeneous catalogue result that opposes the unit-exponent prediction remains adverse; a later homogeneous holdout may add evidence but cannot rewrite it.

25. Geophysical stress and strain

Claim identity: SFT-EARTH-STRESS-STRAIN-001

Question and exact theorem. Geophysical stress and strain retain load orientation, deformation, material state, path, rate and scale rather than reducing both to an unsigned scalar.

```
material-load-deformation-carrier__specimen-and-scale-bounded__load-to-deformation
-relation__orientation-path-rate-history-and-material-state-held__evidence-class-e

- SFT-EARTH-STRESS-STRAIN-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	fault-state-transition-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	event-and-network-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	stored-deformation-to-slip-transition	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	geometry-loading-nucleation-propagation-and-arrest-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: `fault-state-transition-carrier__event-and-network-bounded__stored-deformation-to-slip-transition__geometry-loading-nucleation-propagation-and-arrest-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule`.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier-present`: the claim retains a nonempty named carrier; passed `true`.
- `relation-distinct`: the carrier and relation are not silently conflated; passed `true`.
- `evidence-boundary`: the evidence boundary remains distinct from the result carrier; passed `true`.
- `exact-fold-witness`: the family's pre-source exact Fold construction reproduces; passed `true`.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar. Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Stress, strain, rupture, waves, catalogue construction and volcanism remain distinct. The exact size-count grammar enumerates exponents before data. A heterogeneous catalogue result that opposes the unit-exponent prediction remains adverse; a later homogeneous holdout may add evidence but cannot rewrite it.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	event-detection-location-magnitude-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	catalog-completeness-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	catalog-membership-and-equivalence-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	network-threshold-method-duplicates-errors-and-time-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: event-detection-location-magnitude-carrier__catalog-completeness-bounded__catalog-membership-and-equivalence-relation__network-threshold-method-duplicates-errors-and-time-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.
- evidence-boundary: the evidence boundary remains distinct from the result carrier; passed true.
- exact-fold-witness: the family's pre-source exact Fold construction reproduces; passed true.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar.

Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Stress, strain, rupture, waves, catalogue construction and volcanism remain distinct. The exact size-count grammar enumerates exponents before data. A heterogeneous catalogue result that opposes the unit-exponent prediction remains adverse; a later homogeneous holdout may add evidence but cannot rewrite it.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

29. Earthquake magnitude-frequency law

Claim identity: SFT-EARTH-QUAKE-MAGNITUDE-FREQUENCY-001

Question and exact theorem. An earthquake magnitude-frequency claim is an exact size-count relation over a complete declared catalog, with its exponent derived before blind comparison and all departures retained.

complete-catalog-size-count-carrier__catalog-completeness-bounded__scale-to-freque
 ncy-recurrence__magnitude-scale-threshold-region-time-and-residuals-held__evidence
 -class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all
 -rows__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-ONE-001
- SFT-FOUNDATION-FOLD-001
- SFT-FOUNDATION-FOLD-DYNAMICS-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-BIO-ECOSYSTEM-001
- SFT-BIO-BIO-HANDOFF-001
- SFT-EARTH-TECTONIC-MOTION-001
- SFT-EARTH-EARTHQUAKE-CATALOG-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	complete-catalog-size-count-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	catalog-completeness-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	scale-to-frequency-recurrence	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	magnitude-scale-threshold-region-time-and-residuals-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflicted	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: complete-catalog-size-count-carrier__catalog-completeness-bounded__scale-to-frequency-recurrence__magnitude-scale-threshold-region-time-and-residuals-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.
- evidence-boundary: the evidence boundary remains distinct from the result carrier; passed true.
- exact-fold-witness: the family's pre-source exact Fold construction reproduces; passed true.

Scientific meaning. The generated size-count candidates are exponents 1, 2 and 3. Exact enumeration uniquely selects exponent 1 before opening the catalogue. The first global mixed-type test was adverse: $N \geq 5/N \geq 6 = 18469/1494$ and the registered interval 0.076998990840681139-0.084918164588559525 excludes 1/10. Because magnitude-type and event-status heterogeneity were preserved, a separately preregistered 2020-2026 mww holdout tested $N \geq 6/N \geq 7 = 253/27$, equivalently exceedance 27/253; its interval 0.085657503235220589-0.13089188889528297 contains 1/10. The first result remains adverse and unreclassified.

Stress, strain, rupture, waves, catalogue construction and volcanism remain distinct. The exact size-count grammar enumerates exponents before data. A heterogeneous catalogue result that opposes the unit-exponent prediction remains adverse; a later homogeneous holdout may add evidence but cannot rewrite it.

record	favourable-output-with-incomplete-record	composition-pressure-geometry-time-products-and-failures-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: magma-pathway-eruption-carrier__volcanic-system-bounded__generation-storage-transport-release-transition__composition-pressure-geometry-time-products-and-failures-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier-present`: the claim retains a nonempty named carrier; passed `true`.
- `relation-distinct`: the carrier and relation are not silently conflated; passed `true`.
- `evidence-boundary`: the evidence boundary remains distinct from the result carrier; passed `true`.
- `exact-fold-witness`: the family's pre-source exact Fold construction reproduces; passed `true`.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar. Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Stress, strain, rupture, waves, catalogue construction and volcanism remain distinct. The exact size-count grammar enumerates exponents before data. A heterogeneous catalogue result that opposes the unit-exponent prediction remains adverse; a later homogeneous holdout may add evidence but cannot rewrite it.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

Ledger family 6: Hydrosphere and Cryosphere

Water reservoirs, phase handoffs, surface routes, groundwater routes and ice carriers form one coupled ledger without losing phase, location, interval or uncertainty. An unobserved store is not zero and a flow is not a stock.

31. Water reservoir identity

Claim identity: SFT-EARTH-WATER-RESERVOIR-001

Question and exact theorem. A water reservoir retains amount, phase, composition, location, boundary, residence interval and exchanges as distinct registered properties.

phase-location-bounded-water-carrier__hydrological-domain-bounded__storage-members
 hip-and-exchange-relation__amount-phase-composition-boundary-and-time-held__eviden
 ce-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-a
 ll-rows__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-EARTH-VOLCANIC-PROCESS-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	phase-location-bounded-water-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	hydrological-domain-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	storage-membership-and-exchange-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	amount-phase-composition-boundary-and-time-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.

- SFT-BIO-BIO-HANDOFF-001
- SFT-EARTH-VOLCANIC-PROCESS-001
- SFT-EARTH-WATER-PHASE-HANDOFF-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	water-reservoir-transfer-network	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	basin-and-time-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	evaporation-transport-precipitation-runoff-infiltration-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	stocks-flows-phases-boundaries-and-losses-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: water-reservoir-transfer-network__basin-and-time-bounded__evaporation-transport-precipitation-runoff-infiltration-relation__stocks-flows-phases-boundaries-and-losses-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.
- evidence-boundary: the evidence boundary remains distinct from the result carrier; passed true.
- exact-fold-witness: the family's pre-source exact Fold construction reproduces; passed true.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar.

Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Water reservoirs, phase handoffs, surface routes, groundwater routes and ice carriers form one coupled ledger without losing phase, location, interval or uncertainty. An unobserved store is not zero and a flow is not a stock.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

35. Rivers, lakes and surface-water networks

Claim identity: SFT-EARTH-SURFACE-WATER-001

Question and exact theorem. Surface-water organization is a directed storage and transfer network over rivers, lakes, wetlands and interfaces with complete catchment and observation boundaries.

surface-water-node-edge-carrier__catchment-window-bounded__storage-routing-and-exchange-relation__network-geometry-flow-quality-boundaries-and-time-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-ONE-001
- SFT-FOUNDATION-FOLD-001
- SFT-FOUNDATION-FOLD-DYNAMICS-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-GRAPH-NETWORK-001

- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-PHASE-CHEMICAL-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-THERM-CONDUCTION-001
- SFT-BIO-ECOSYSTEM-001
- SFT-BIO-BIO-HANDOFF-001
- SFT-EARTH-VOLCANIC-PROCESS-001
- SFT-EARTH-GROUNDWATER-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	surface-water-node-edge-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	catchment-window-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	storage-routing-and-exchange-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	network-geometry-flow-quality-boundaries-and-time-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: surface-water-node-edge-carrier__catchment-window-bounded__storage-routing-and-exchange-relation__network-geometry-flow-quality-boundaries-and-time-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.
- evidence-boundary: the evidence boundary remains distinct from the result carrier; passed true.
- exact-fold-witness: the family's pre-source exact Fold construction reproduces; passed true.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar.

Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Water reservoirs, phase handoffs, surface routes, groundwater routes and ice carriers form one coupled ledger without losing phase, location, interval or uncertainty. An unobserved store is not zero and a flow is not a stock.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256: 94a7ad14a3a943432e5baba16e26b5be9eb090442e0a0c32fc835c555e91e09f.

Ledger family 7: Atmosphere, Weather and Earth-Ionosphere Recurrence

Atmospheric composition, radiative transfer, moisture, circulation and weather are source- and timescale-bounded. A bounded Earth-ionosphere cavity forces distinct recurrent modes structurally; dimensional frequencies remain separately measured records rather than imported proof parameters.

37. Atmospheric system identity

Claim identity: SFT-EARTH-ATMOSPHERE-001

Question and exact theorem. The atmosphere is a layered, moving material and energy carrier whose composition, state, boundaries and exchanges with other Earth reservoirs remain explicit.

bounded-gas-aerosol-energy-carrier__atmospheric-observation-bounded__layered-composition-motion-and-exchange-relation__composition-state-height-boundaries-and-time-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-success-or-retains-all-rows__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-BIO-ECOSYSTEM-001
- SFT-BIO-BIO-HANDOFF-001
- SFT-EARTH-CRYOSPHERE-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	bounded-gas-aerosol-energy-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	atmospheric-observation-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	layered-composition-motion-and-exchange-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	composition-state-height-boundaries-and-time-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: bounded-gas-aerosol-energy-carrier__atmospheric-observation-bounded__layered-composition-motion-and-exchange-relation__composition-state-height-boundaries-and-time-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.
- evidence-boundary: the evidence boundary remains distinct from the result carrier; passed true.
- exact-fold-witness: the family's pre-source exact Fold construction reproduces; passed true.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar.

Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Atmospheric composition, radiative transfer, moisture, circulation and weather are source- and timescale-bounded. A bounded Earth-ionosphere cavity forces distinct recurrent modes structurally; dimensional frequencies remain separately measured records rather than imported proof parameters.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

- SFT-EARTH-CRYOSPHERE-001
- SFT-EARTH-ATMOSPHERIC-COMPOSITION-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	spectral-source-layer-boundary-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	spectral-spatial-window-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	absorption-emission-scattering-transfer-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	spectrum-direction-cloud-aerosol-surface-and-time-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: spectral-source-layer-boundary-carrier__spectral-spatial-window-bounded__absorption-emission-scattering-transfer-relation__spectrum-direction-cloud-aerosol-surface-and-time-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.
- evidence-boundary: the evidence boundary remains distinct from the result carrier; passed true.
- exact-fold-witness: the family's pre-source exact Fold construction reproduces; passed true.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar. Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Atmospheric composition, radiative transfer, moisture, circulation and weather are source- and timescale-bounded. A bounded Earth-ionosphere cavity forces distinct recurrent modes structurally; dimensional frequencies remain separately measured records rather than imported proof parameters.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: `time-indexed-air-mass-motion-carrier__spatial-temporal-window-bounded__transport-recurrence-and-exchange-network__position-orientation-moisture-energy-boundaries-and-time-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule`.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier-present`: the claim retains a nonempty named carrier; passed `true`.
- `relation-distinct`: the carrier and relation are not silently conflated; passed `true`.
- `evidence-boundary`: the evidence boundary remains distinct from the result carrier; passed `true`.
- `exact-fold-witness`: the family's pre-source exact Fold construction reproduces; passed `true`.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar.

Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Atmospheric composition, radiative transfer, moisture, circulation and weather are source- and timescale-bounded. A bounded Earth-ionosphere cavity forces distinct recurrent modes structurally; dimensional frequencies remain separately measured records rather than imported proof parameters.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

- SFT-EARTH-CRYOSPHERE-001
- SFT-EARTH-ATMOSPHERIC-CIRCULATION-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	finite-time-atmospheric-state-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	forecast-horizon-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	state-transition-and-observation-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	initial-state-forcing-resolution-ensemble-and-outcomes-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.

Axis	Eliminated form	Forced form	Exact elimination / retention basis

- SFT-BIO-BIO-HANDOFF-001
- SFT-EARTH-CRYOSPHERE-001
- SFT-EARTH-WEATHER-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	earth-surface-atmosphere-ionosphere-boundary-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	earth-cavity-observation-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	bounded-propagation-mode-recurrence	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	geometry-medium-source-spectrum-time-and-uncertainty-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: earth-surface-atmosphere-ionosphere-boundary-carrier__earth-cavity-observation-bounded__bounded-propagation-mode-recurrence__geometry-medium-source-spectrum-time-and-uncertainty-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier-present`: the claim retains a nonempty named carrier; passed `true`.
- `relation-distinct`: the carrier and relation are not silently conflated; passed `true`.
- `evidence-boundary`: the evidence boundary remains distinct from the result carrier; passed `true`.
- `exact-fold-witness`: the family's pre-source exact Fold construction reproduces; passed `true`.

Scientific meaning. A bounded cavity and positive finite recurrence force more than one distinguishable mode. The theorem does not read a frequency from theory or turn a measured hertz value into a proof parameter; primary magnetometer evidence tests the separate dimensional boundary.

Atmospheric composition, radiative transfer, moisture, circulation and weather are source- and timescale-bounded. A bounded Earth-ionosphere cavity forces distinct recurrent modes structurally; dimensional frequencies remain separately measured records rather than imported proof parameters.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

Post-seal empirical comparison. Directness:

`authoritative_observation_or_primary_measurement_boundary_correspondence`. Disposition:
`purpose_matched_authoritative_source_features_present`. Predicted consequence: `earth:earth-surface-atmosphere-ionosphere-boundary-carrier__bounded-propagation-mode-recurrence__geometry-medium-source-spectrum-time-and-uncertainty-held__earth-cavity-observation-bounded__bounded-discrete-modes-dimensional-frequency-measured`. Source-derived consequence: `earth:earth-surface-atmosphere-ionosphere-boundary-carrier__bounded-propagation-mode-recurrence__geometry-medium-source-spectrum-time-and-uncertainty-held__earth-cavity-observation-bounded__bounded-discrete-modes-dimensional-frequency-measured`. Exact boundary correspondence: `true`. External evidence selected the survivor: `false`. Formal structure relabelled as direct measurement: `false`. Model, forecast, proxy or retrieval relabelled as observation: `false`.

Sources and complete feature accounting:

- SCHUMANN-MAGNETOMETER-2018-001 - Virgo and KAGRA magnetometer measurement collaboration, **Measurement and subtraction of Schumann resonances at gravitational-wave interferometers**; class `primary_measurement_study`; transport captured; features 4/5 present; present: magnetometer spectrum, correlated Earth-scale resonance, frequency-resolved measured peaks, instrumental subtraction boundary; absent and preserved: independent site identity.
- EARTHSCOPE-SAGE-SERVICES-001 - NSF SAGE Facility operated by EarthScope Consortium, **Seismological and geophysical web services**; class `authoritative_geophysical_data_service`; transport captured; features 3/4 present; present: station and channel identity, waveform and event access, instrument response; absent and preserved: observed and derived product distinction.

Comparison record:

- `sft-earth-earth-ionosphere-resonance-001-external-earth-evidence`: predicted `earth:earth-surface-atmosphere-ionosphere-boundary-carrier__bounded-propagation-mode-recurrence__geometry-medium-source-spectrum-time-and-uncertainty-held__earth-cavity-observation-bounded__bounded-discrete-modes-dimensional-frequency-measured`; source-derived `earth:earth-surface-atmosphere-ionosphere-boundary-carrier__bounded-propagation-mode-recurrence__geometry-medium-source-spectrum-time-and-uncertainty-held__earth-cavity-observation-bounded__bounded-discrete-modes-dimensional-frequency-measured`; exact match `True`
- source features: 67 present; 24 absent preserved; 91 registered
- the original failed transport and every adverse, absent and unresolved row remain preserved
- a deliberately changed external consequence was rejected

Falsification boundary: Reject if the observed resonant frequency selects the cavity law, if a universal wave law is renowned, or if engineering transmission claims are inferred from resonance alone.

Explicit exclusions.

- semantic numerical zero
- negative proof quantity
- irrational or imaginary proof value
- completed infinity
- ungenerated continuum
- free or fitted parameter
- target-selected survivor
- prior answer as premise
- conventional Earth model as premise
- proxy or retrieval relabelled as direct observation
- model or forecast relabelled as observation
- opaque predictor as law
- erased adverse, absent, censored, missing or unresolved row

Ledger family 8: Ocean and Coast

Ocean identity retains composition, depth, stratification, circulation and interfaces. Air-sea transfer is two-sided. Coastal and tidal observations retain geometry, forcing, local response, datum and time rather than treating a site-dependent magnitude as a universal constant.

44. Ocean system identity

Claim identity: SFT-EARTH-OCEAN-001

Question and exact theorem. The ocean is a basin- and boundary-resolved seawater organization retaining composition, state, depth, motion and exchanges with atmosphere, land, ice and seabed.

bounded-seawater-basin-interface-carrier__ocean-observation-bounded__storage-motion-composition-and-exchange-relation__basin-depth-composition-state-boundaries-and-time-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-ONE-001
- SFT-FOUNDATION-FOLD-001
- SFT-FOUNDATION-FOLD-DYNAMICS-001

- SFT-BIO-ECOSYSTEM-001
- SFT-BIO-BIO-HANDOFF-001
- SFT-EARTH-EARTH-IONOSPHERE-RESONANCE-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	bounded-seawater-basin-interface-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	ocean-observation-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	storage-motion-composition-and-exchange-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	basin-depth-composition-state-boundaries-and-time-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: bounded-seawater-basin-interface-carrier__ocean-observation-bounded__storage-motion-composition-and-exchange-relation__basin-depth-composition-state-boundaries-and-time-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.
- evidence-boundary: the evidence boundary remains distinct from the result carrier; passed true.

- `exact-fold-witness`: the family's pre-source exact Fold construction reproduces; passed `true`.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar. Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Ocean identity retains composition, depth, stratification, circulation and interfaces. Air-sea transfer is two-sided. Coastal and tidal observations retain geometry, forcing, local response, datum and time rather than treating a site-dependent magnitude as a universal constant.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:a8531fd94c42f15aec67605e9537d5b44216fded62e52d9f17814b4dcd89300c.

46. Ocean stratification

Claim identity: SFT-EARTH-OCEAN-STRATIFICATION-001

Question and exact theorem. Ocean stratification is a depth- and time-resolved organization of water masses defined by retained property contrasts, interfaces, mixing and observation uncertainty.

depth-indexed-water-mass-carrier__profile-network-bounded__property-contrast-and-l
 ayer-stability-relation__temperature-composition-pressure-mixing-and-time-held__ev
 idence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retai
 ns-all-rows__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-ONE-001
- SFT-FOUNDATION-FOLD-001
- SFT-FOUNDATION-FOLD-DYNAMICS-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-COMP-FORM-STATE-TRANSITION-001
- SFT-COMP-FORM-COMPOSITION-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-THERMO-FIRST-LAW-001
- SFT-PHYS-THERMO-SECOND-LAW-001
- SFT-PHYS-FLUID-CONSERVATION-001
- SFT-PHYS-WAVE-PROPAGATION-001
- SFT-CHEM-MEAS-SUBSTANCE-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-PHASE-CHEMICAL-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-THERM-CONDUCTION-001
- SFT-BIO-ECOSYSTEM-001
- SFT-BIO-BIO-HANDOFF-001
- SFT-EARTH-EARTH-IONOSPHERE-RESONANCE-001
- SFT-EARTH-OCEAN-COMPOSITION-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	depth-indexed-water-mass-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	profile-network-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	property-contrast-and-layer-stability-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	temperature-composition-pressure-mixing-and-time-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflicted	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: `depth-indexed-water-mass-carrier__profile-network-bounded__property-contrast-and-layer-stability-relation__temperature-composition-pressure-mixing-and-time-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule`.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier-present`: the claim retains a nonempty named carrier; passed `true`.
- `relation-distinct`: the carrier and relation are not silently conflated; passed `true`.
- `evidence-boundary`: the evidence boundary remains distinct from the result carrier; passed `true`.
- `exact-fold-witness`: the family's pre-source exact Fold construction reproduces; passed `true`.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar.

Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Ocean identity retains composition, depth, stratification, circulation and interfaces. Air-sea transfer is two-sided. Coastal and tidal observations retain geometry, forcing, local response, datum and time rather than treating a site-dependent magnitude as a universal constant.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:016bc5c02d2a9cd75a852a7c97a27ab2e7cb1699439b9aa312dcfc11bdc27e76.

```

48. Air-sea exchange

Claim identity: SFT-EARTH-AIR-SEA-EXCHANGE-001

Question and exact theorem. Air-sea exchange is a two-way, interface-bounded transfer ledger retaining carrier identity, direction, area, state, time and method uncertainty.

```
atmosphere-ocean-interface-carrier__interface-method-bounded__two-way-material-ene
rgy-transfer-relation__species-energy-area-direction-state-and-time-held__evidence
-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all
-rows__no-extra-rule
```

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-ONE-001
- SFT-FOUNDATION-FOLD-001

- SFT-BIO-BIO-HANDOFF-001

- SFT-EARTH-EARTH-IONOSPHERE-RESONANCE-001
- SFT-EARTH-OCEAN-CIRCULATION-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	atmosphere-ocean-interface-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	interface-method-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	two-way-material-energy-transfer-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	species-energy-area-direction-state-and-time-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: atmosphere-ocean-interface-carrier__interface-method-bounded__two-way-material-energy-transfer-relation__species-energy-area-direction-state-and-time-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.
- evidence-boundary: the evidence boundary remains distinct from the result carrier; passed true.
- exact-fold-witness: the family's pre-source exact Fold construction reproduces; passed true.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar.

Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Ocean identity retains composition, depth, stratification, circulation and interfaces. Air-sea transfer is two-sided. Coastal and tidal observations retain geometry, forcing, local response, datum and time rather than treating a site-dependent magnitude as a universal constant.

Adverse controls.

- `false_promise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:7032dd1476930aafde86d131871996c0e9cbfe5f7e9d40d23fbe714b690ac346.

49. Coastal and tidal Earth-system response

Claim identity: SFT-EARTH-COAST-TIDE-001

Question and exact theorem. A coastal tidal response consumes Astronomy-owned orbital forcing and Physics-owned wave laws while Earth Science owns the measured water, current, sediment and boundary response.

ocean-land-orbital-forcing-interface-carrier__coastal-region-bounded__periodic-forcing-propagation-and-dissipation-relation__geometry-water-level-current-sediment-time-and-handoff-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule

Ledger family 9: Climate, Forcing, Feedback, Attribution and Tipping

Weather and climate differ by retained timescale and state history. Forcing, feedback, variability and attribution require complete counterfactual and evidence records. The exact Fold witness supplies multiple basins and a shared image; it does not fabricate a universal physical half-threshold.

50. Climate state

Claim identity: SFT-EARTH-CLIMATE-001

Question and exact theorem. Climate is a source- and interval-bounded distribution of Earth-system states, variations and extremes rather than one instantaneous weather state or mean.

distribution-of-earth-state-histories-carrier__declared-climate-window-bounded__time-window-recurrence-and-change-relation__variables-distributions-extremes-boundaries-and-methods-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-EARTH-COAST-TIDE-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	distribution-of-earth-state-histories-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	declared-climate-window-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	time-window-recurrence-and-change-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
record	favourable-output-with-incomplete-record	variables-distributions-extremes-boundaries-and-methods-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: `distribution-of-earth-state-histories-carrier__declared-climate-window-bounded__time-window-recurrence-and-change-relation__variables-distributions-extremes-boundaries-and-methods-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule`.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier-present`: the claim retains a nonempty named carrier; passed `true`.
- `relation-distinct`: the carrier and relation are not silently conflated; passed `true`.
- `evidence-boundary`: the evidence boundary remains distinct from the result carrier; passed `true`.
- `exact-fold-witness`: the family's pre-source exact Fold construction reproduces; passed `true`.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar.

Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Weather and climate differ by retained timescale and state history. Forcing, feedback, variability and attribution require complete counterfactual and evidence records. The exact Fold witness supplies multiple basins and a shared image; it does not fabricate a universal physical half-threshold.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:9bfbb67383b07471595d77d9f01c89d7b7924422171df39942bb8f34126aa7a3.

carrier	answer-only-or-unbounded-carrier	external-or-boundary-driver-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	system-boundary-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	driver-to-energy-or-matter-budget-change	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	identity-magnitude-timing-spectrum-location-and-uncertainty-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: external-or-boundary-driver-carrier__system-boundary-bounded__driver-to-energy-or-matter-budget-change__identity-magnitude-timing-spectrum-location-and-uncertainty-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.
- evidence-boundary: the evidence boundary remains distinct from the result carrier; passed true.
- exact-fold-witness: the family's pre-source exact Fold construction reproduces; passed true.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar. Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Weather and climate differ by retained timescale and state history. Forcing, feedback, variability and attribution require complete counterfactual and evidence records. The exact Fold witness supplies multiple basins and a shared image; it does not fabricate a universal physical half-threshold.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

53. Climate feedback

Claim identity: SFT-EARTH-CLIMATE-FEEDBACK-001

Question and exact theorem. A climate feedback is a closed response path that modifies a registered driver or budget; its orientation, path, delay and boundary must remain structural labels rather than negative proof scalars.

state-response-return-path-carrier__process-timescale-bounded__response-modifies-d
 river-or-budget-relation__sign-as-orientation-gain-path-delay-and-boundaries-held_
 _evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-re
 tains-all-rows__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-ONE-001
- SFT-FOUNDATION-FOLD-001
- SFT-FOUNDATION-FOLD-DYNAMICS-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-EARTH-CLIMATE-FORCING-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	state-response-return-path-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	process-timescale-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	response-modifies-driver-or-budget-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.

Unique survivor and depth independence. Sole survivor: coupled-state-history-carrier__record-and-scale-bounded__recurrent-and-nonrecurrent-transition-partition__modes-phases-forcing-record-length-and-missingness-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier-present`: the claim retains a nonempty named carrier; passed `true`.
- `relation-distinct`: the carrier and relation are not silently conflated; passed `true`.
- `evidence-boundary`: the evidence boundary remains distinct from the result carrier; passed `true`.
- `exact-fold-witness`: the family's pre-source exact Fold construction reproduces; passed `true`.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar. Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Weather and climate differ by retained timescale and state history. Forcing, feedback, variability and attribution require complete counterfactual and evidence records. The exact Fold witness supplies multiple basins and a shared image; it does not fabricate a universal physical half-threshold.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:b5ad86101fc00d4c6f8a4f0f40d0767555e3fca169cf9e43ff9fbe914867250.
- `tampered_source`: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt

- SFT-EARTH-COAST-TIDE-001
- SFT-EARTH-CLIMATE-VARIABILITY-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	observation-driver-response-alternative-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	question-and-period-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	generated-alternative-elimination-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	forcings-internal-variation-methods-controls-and-uncertainty-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: observation-driver-response-alternative-carrier__question-and-period-bounded__generated-alternative-elimination-relation__forcings-internal-variation-methods-controls-and-uncertainty-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

- SFT-EARTH-CLIMATE-ATTRIBUTION-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	multi-basin-state-forcing-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	system-proxy-and-timescale-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	threshold-crossing-hysteresis-and-return-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	state-variable-driver-path-rate-controls-and-time-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: multi-basin-state-forcing-carrier__system-proxy-and-timescale-bounded__threshold-crossing-hysteresis-and-return-relation__state-variable-driver-path-rate-controls-and-time-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.
- evidence-boundary: the evidence boundary remains distinct from the result carrier; passed true.
- exact-fold-witness: the family's pre-source exact Fold construction reproduces; passed true.

Scientific meaning. The exact two-basin witness forces distinguishable basins sharing an image and supports path dependence. It explicitly rejects conversion of the abstract half-One holding coordinate into a universal measured Earth-system threshold.

Weather and climate differ by retained timescale and state history. Forcing, feedback, variability and attribution require complete counterfactual and evidence records. The exact Fold witness supplies multiple basins and a shared image; it does not fabricate a universal physical half-threshold.

Adverse controls.

Ledger family 10: Biogeochemical and Ecological Coupling

Carbon, nitrogen and phosphorus cycles retain chemical species, reservoirs, organisms, transformations and flows. Biosphere exchange is explicitly two-way. Ecology remains at the Biology handoff: environmental carriers constrain biological response without re-owning universal biological law.

57. Earth carbon cycle

Claim identity: SFT-EARTH-CARBON-CYCLE-001

Question and exact theorem. The Earth carbon cycle is a species- and reservoir-resolved transformation and transfer network with isotopic, stock, flow, boundary and uncertainty records retained.

`carbon-species-reservoir-network__earth-carbon-domain-bounded__transformation-storage-and-transfer-relation__species-isotopes-stocks-flows-boundaries-and-time-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-re`

tains-all-rows__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-EARTH-EARTH-SYSTEM-TIPPING-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	carbon-species-reservoir-network	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	earth-carbon-domain-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	transformation-storage-and-transfer-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	species-isotopes-stocks-flows-boundaries-and-time-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: carbon-species-reservoir-network__earth-carbon-domain-bounded__transformation-storage-and-transfer-relation__species-isotopes-stocks-flows-boundaries-and-time-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.
- evidence-boundary: the evidence boundary remains distinct from the result carrier; passed true.
- exact-fold-witness: the family's pre-source exact Fold construction reproduces; passed true.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar.

Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Carbon, nitrogen and phosphorus cycles retain chemical species, reservoirs, organisms, transformations and flows. Biosphere exchange is explicitly two-way. Ecology remains at the Biology handoff: environmental carriers constrain biological response without re-owning universal biological law.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

59. Earth phosphorus cycle

Claim identity: SFT-EARTH-PHOSPHORUS-CYCLE-001

Question and exact theorem. The Earth phosphorus cycle composes geological, chemical and biological carriers while retaining weathering, uptake, transfer, burial, return and boundary exports.

phosphorus-species-rock-soil-water-biota-network__earth-phosphorus-domain-bounded_
 _weathering-uptake-transfer-return-relation__species-stocks-flows-organisms-sedime
 nt-and-time-held__evidence-class-explicit__root-bound-forward-forcing__positive-fi
 nite-successor-retains-all-rows__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-ONE-001
- SFT-FOUNDATION-FOLD-001
- SFT-FOUNDATION-FOLD-DYNAMICS-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-BIO-ECOSYSTEM-001
- SFT-BIO-BIO-HANDOFF-001
- SFT-EARTH-EARTH-SYSTEM-TIPPING-001
- SFT-EARTH-NITROGEN-CYCLE-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	phosphorus-species-rock-soil-water-biota-network	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	earth-phosphorus-domain-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
relation	imported-fitted-or-missing-relation	weathering-uptake-transfer-return-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	species-stocks-flows-organisms-sediment-and-time-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: phosphorus-species-rock-soil-water-biota-network__earth-phosphorus-domain-bounded__weathering-uptake-transfer-return-relation__species-stocks-flows-organisms-sediment-and-time-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.
- evidence-boundary: the evidence boundary remains distinct from the result carrier; passed true.
- exact-fold-witness: the family's pre-source exact Fold construction reproduces; passed true.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar.

Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Carbon, nitrogen and phosphorus cycles retain chemical species, reservoirs, organisms, transformations and flows. Biosphere exchange is explicitly two-way. Ecology remains at the Biology handoff: environmental carriers constrain biological response without re-owning universal biological law.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:c168e0a1d92761ce2181739868cbd382e7d8dee64d6d10116259bf3b2602beff.

61. Coupled ecosystem-Earth organisation

Claim identity: SFT-EARTH-COUPLED-ECOSYSTEM-001

Question and exact theorem. A coupled ecosystem-Earth claim retains Biology-owned communities together with abiotic stocks, transfers, disturbances, observation effort and missing links.

community-abiotic-reservoir-joint-carrier__ecosystem-observation-bounded__biotic-a
 biotic-transfer-and-feedback-network__species-resources-disturbance-boundaries-eff
 ort-and-time-held__evidence-class-explicit__root-bound-forward-forcing__positive-f
 inite-successor-retains-all-rows__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-ONE-001
- SFT-FOUNDATION-FOLD-001
- SFT-FOUNDATION-FOLD-DYNAMICS-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-THERMO-FIRST-LAW-001
- SFT-PHYS-THERMO-SECOND-LAW-001
- SFT-PHYS-FLUID-CONSERVATION-001
- SFT-PHYS-WAVE-PROPAGATION-001
- SFT-CHEM-MEAS-SUBSTANCE-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-PHASE-CHEMICAL-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-THERM-CONDUCTION-001
- SFT-BIO-ECOSYSTEM-001
- SFT-BIO-BIO-HANDOFF-001
- SFT-EARTH-EARTH-SYSTEM-TIPPING-001
- SFT-EARTH-BIOSPHERE-EXCHANGE-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	community-abiotic-reservoir-joint-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	ecosystem-observation-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	biotic-abiotic-transfer-and-feedback-network	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	species-resources-disturbance-boundaries-effort-and-time-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: community-abiotic-reservoir-joint-carrier__ecosystem-observation-bounded__biotic-abiotic-transfer-and-feedback-network__species-resources-disturbance-boundaries-effort-and-time-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.
- evidence-boundary: the evidence boundary remains distinct from the result carrier; passed true.
- exact-fold-witness: the family's pre-source exact Fold construction reproduces; passed true.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar.

Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Carbon, nitrogen and phosphorus cycles retain chemical species, reservoirs, organisms, transformations and flows. Biosphere exchange is explicitly two-way. Ecology remains at the Biology handoff: environmental carriers constrain biological response without re-owning universal biological law.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:786c00624caebf133074070a69d64c8dae4de0c45c7d70f9aec0519ed162bd4e.

62. Biodiversity-environment boundary

Claim identity: SFT-EARTH-BIODIVERSITY-ENVIRONMENT-001

Question and exact theorem. A biodiversity-environment relation is a sampling- and design-bounded comparison retaining taxonomic identity, habitat, pressure, response, confounders and missingness.

taxon-trait-habitat-pressure-carrier__study-design-bounded__environmental-conditions-to-biological-response-comparison__sampling-taxonomy-space-time-confounders-and-missingness-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

Ledger family 11: Environmental Transport, Transformation and Quality

A pollutant requires substance, form, source, medium, exposure and endpoint. Source-path-receptor chains retain transport, transformation, accumulation and release. Environmental quality is purpose- and jurisdiction-bounded; a threshold cannot silently become a universal natural law.

63. Pollutant identity and boundary

Claim identity: SFT-EARTH-POLLUTANT-IDENTITY-001

Question and exact theorem. A pollutant is a source- and context-bound material form associated with a declared exposure and adverse endpoint; substance identity alone does not establish harm.

substance-form-source-context-carrier__environment-health-handoff-bounded__harm-re
 levant-exposure-classification__chemical-form-source-medium-dose-time-and-endpoint
 -held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-succes
 sor-retains-all-rows__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-ONE-001
- SFT-FOUNDATION-FOLD-001
- SFT-FOUNDATION-FOLD-DYNAMICS-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-PHASE-CHEMICAL-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-THERM-CONDUCTION-001
- SFT-BIO-ECOSYSTEM-001
- SFT-BIO-BIO-HANDOFF-001
- SFT-EARTH-BIODIVERSITY-ENVIRONMENT-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	substance-form-source-context-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	environment-health-handoff-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	harm-relevant-exposure-classification	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	chemical-form-source-medium-dose-time-and-endpoint-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: substance-form-source-context-carrier__environment-health-handoff-bounded__harm-relevant-exposure-classification__chemical-form-source-medium-dose-time-and-endpoint-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.
- evidence-boundary: the evidence boundary remains distinct from the result carrier; passed true.
- exact-fold-witness: the family's pre-source exact Fold construction reproduces; passed true.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar. Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

A pollutant requires substance, form, source, medium, exposure and endpoint. Source-path-receptor chains retain transport, transformation, accumulation and release. Environmental quality is purpose- and jurisdiction-bounded; a threshold cannot silently become a universal natural law.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

65. Environmental contaminant transport

Claim identity: SFT-EARTH-ENVIRONMENTAL-TRANSPORT-001

Question and exact theorem. Environmental transport is a carrier-resolved pathway network that cites upstream physical and material laws and retains phase, direction, boundaries, transformations and uncertainty.

material-medium-pathway-network__site-and-medium-bounded__advection-dispersion-partition-and-transfer-relation__species-phase-direction-boundaries-time-and-uncertainty-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-EARTH-BIODIVERSITY-ENVIRONMENT-001
- SFT-EARTH-SOURCE-PATH-RECEPTOR-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	material-medium-pathway-network	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	site-and-medium-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	advection-dispersion-partition-and-transfer-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	species-phase-direction-boundaries-time-and-uncertainty-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: material-medium-pathway-network__site-and-medium-bounded__advection-dispersion-partition-and-transfer-relation__species-phase-direction-boundaries-time-and-uncertainty-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier-present`: the claim retains a nonempty named carrier; passed `true`.
- `relation-distinct`: the carrier and relation are not silently conflated; passed `true`.
- `evidence-boundary`: the evidence boundary remains distinct from the result carrier; passed `true`.
- `exact-fold-witness`: the family's pre-source exact Fold construction reproduces; passed `true`.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar. Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

A pollutant requires substance, form, source, medium, exposure and endpoint. Source-path-receptor chains retain transport, transformation, accumulation and release. Environmental quality is purpose- and jurisdiction-bounded; a threshold cannot silently become a universal natural law.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	input-storage-output-history-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	reservoir-and-interval-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	retention-and-release-ledger	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	carrier-reservoir-input-output-transformation-and-time-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: `input-storage-output-history-carrier__reservoir-and-interval-bounded__retention-and-release-ledger__carrier-reservoir-input-output-transformation-and-time-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule`.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier-present`: the claim retains a nonempty named carrier; passed `true`.
- `relation-distinct`: the carrier and relation are not silently conflated; passed `true`.
- `evidence-boundary`: the evidence boundary remains distinct from the result carrier; passed `true`.
- `exact-fold-witness`: the family's pre-source exact Fold construction reproduces; passed `true`.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar. Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

A pollutant requires substance, form, source, medium, exposure and endpoint. Source-path-receptor chains retain transport, transformation, accumulation and release. Environmental quality is purpose- and jurisdiction-bounded; a threshold cannot silently become a universal natural law.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256: 41fd30d09698fb7783f3b0e3edd6e2e1f0e150cdc750fc5df6004ef673177387.
- `tampered_source`: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt

Ledger family 12: Field Evidence, Remote Sensing, Forecasts and Hazard Handoffs

Field observations, remote sensing, proxy reconstruction, model assimilation and forecasts are separate evidence classes. Hazard, exposure, vulnerability, capacity and consequence remain different carriers. Forecast success cannot admit an opaque relation, and a model output cannot be relabelled as observation.

69. Field observation and sampling

Claim identity: SFT-EARTH-FIELD-OBSERVATION-001

Question and exact theorem. A field observation retains site selection, sampling design, effort, calibration, processing, exclusions and representativeness limits.

site-specimen-instrument-result-carrier__representativeness-declared__sampling-to-
 population-relation__design-location-time-effort-calibration-and-exclusions-held__
 evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-ret

extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: `site-specimen-instrument-result-carrier__representativeness-declared__sampling-to-population-relation__design-location-time-effort-calibration-and-exclusions-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule`.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

- `carrier-present`: the claim retains a nonempty named carrier; passed `true`.
- `relation-distinct`: the carrier and relation are not silently conflated; passed `true`.
- `evidence-boundary`: the evidence boundary remains distinct from the result carrier; passed `true`.
- `exact-fold-witness`: the family's pre-source exact Fold construction reproduces; passed `true`.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar.

Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Field observations, remote sensing, proxy reconstruction, model assimilation and forecasts are separate evidence classes.

Hazard, exposure, vulnerability, capacity and consequence remain different carriers. Forecast success cannot admit an opaque relation, and a model output cannot be relabelled as observation.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:0df438472ce86cc135edbd150b7926270d7107616fcdf0adc4a09c9b3b874d41.

70. Remote-sensing observation

Claim identity: SFT-EARTH-REMOTE-SENSING-001

Question and exact theorem. Remote sensing is a source-to-path-to-sensor-to-retrieval trace whose geophysical interpretation retains calibration, geometry, processing, validation and unavailable pixels.

source-path-sensor-retrieval-carrier__sensor-product-bounded__signal-to-geophysical-record-relation__geometry-spectrum-calibration-processing-validation-and-cloud-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-ONE-001
- SFT-FOUNDATION-FOLD-001
- SFT-FOUNDATION-FOLD-DYNAMICS-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-PROBABILITY-STATISTICS-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-MATH-CATEGORY-TYPE-COMPOSITION-001
- SFT-INFO-QUANTITY-001
- SFT-INFO-ENTROPY-UNCERTAINTY-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-COMP-FORM-STATE-TRANSITION-001
- SFT-COMP-FORM-COMPOSITION-001

- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-THERMO-FIRST-LAW-001
- SFT-PHYS-THERMO-SECOND-LAW-001
- SFT-PHYS-FLUID-CONSERVATION-001
- SFT-PHYS-WAVE-PROPAGATION-001
- SFT-CHEM-MEAS-SUBSTANCE-001

- SFT-CHEM-PHASE-CHEMICAL-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-THERM-CONDUCTION-001
- SFT-BIO-ECOSYSTEM-001
- SFT-BIO-BIO-HANDOFF-001
- SFT-EARTH-ENVIRONMENTAL-QUALITY-001
- SFT-EARTH-FIELD-OBSERVATION-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	source-path-sensor-retrieval-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	sensor-product-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	signal-to-geophysical-record-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	geometry-spectrum-calibration-processing-validation-and-cloud-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: `source-path-sensor-retrieval-carrier__sensor-product-bounded__signal-to-geophysical-record-relation__geometry-spectrum-calibration-processing-validation-and-cloud-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule`.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: `depth_independent`; minimality and named-shape uniqueness both pass.

Operational witnesses.

72. Earth model and data-assimilation boundary

Claim identity: SFT-EARTH-MODEL-DATA-ASSIMILATION-001

Question and exact theorem. An Earth model is a declared conditional simulation and data assimilation is a traceable state update; neither can select an SFT law or become an observation.

law-state-observation-update-carrier__model-purpose-bounded__conditional-simulatio
 n-and-state-update-relation__equations-as-correspondence-inputs-parameters-observa
 tions-errors-and-outputs-held__evidence-class-explicit__root-bound-forward-forcing
 __positive-finite-successor-retains-all-rows__no-extra-rule

Routed dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-ONE-001
- SFT-FOUNDATION-FOLD-001
- SFT-FOUNDATION-FOLD-DYNAMICS-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001

- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-THERMO-FIRST-LAW-001
- SFT-PHYS-THERMO-SECOND-LAW-001
- SFT-PHYS-FLUID-CONSERVATION-001
- SFT-PHYS-WAVE-PROPAGATION-001
- SFT-CHEM-MEAS-SUBSTANCE-001
- SFT-CHEM-STOICH-CONSERVATION-001

- SFT-CHEM-PHASE-CHEMICAL-001
- SFT-MAT-MEAS-MATERIAL-001
- SFT-MAT-MEAS-PROPERTY-001
- SFT-MAT-THERM-CONDUCTION-001
- SFT-BIO-ECOSYSTEM-001
- SFT-BIO-BIO-HANDOFF-001
- SFT-EARTH-ENVIRONMENTAL-QUALITY-001
- SFT-EARTH-PROXY-RECONSTRUCTION-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	law-state-observation-update-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	model-purpose-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	conditional-simulation-and-state-update-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	equations-as-correspondence-inputs-parameters-observations-errors-and-outputs-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: law-state-observation-update-carrier__model-purpose-bounded__conditional-simulation-and-state-update-relation__equations-as-correspondence-inputs-parameters-observations-errors-and-outputs-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.
- evidence-boundary: the evidence boundary remains distinct from the result carrier; passed true.
- exact-fold-witness: the family's pre-source exact Fold construction reproduces; passed true.

Scientific meaning. A model remains a conditional correspondence with inputs, parameters, observations, errors and outputs retained. Assimilation does not promote the model into a direct observation or allow forecast performance to select a hidden law.

Field observations, remote sensing, proxy reconstruction, model assimilation and forecasts are separate evidence classes. Hazard, exposure, vulnerability, capacity and consequence remain different carriers. Forecast success cannot admit an opaque relation, and a model output cannot be relabelled as observation.

Adverse controls.

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:ba57517a2f276f72c835cfaca970b4bd85e2e3fca30c750cefd51454f35e3035.

- SFT-BIO-BIO-HANDOFF-001
- SFT-EARTH-ENVIRONMENTAL-QUALITY-001
- SFT-EARTH-MODEL-DATA-ASSIMILATION-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	sealed-forecast-outcome-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	forecast-question-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	predeclared-comparison-relation	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	targets-metrics-baselines-adverse-cases-missingness-and-time-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: sealed-forecast-outcome-carrier__forecast-question-bounded__predeclared-comparison-relation__targets-metrics-baselines-adverse-cases-missingness-and-time-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule.

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.
- evidence-boundary: the evidence boundary remains distinct from the result carrier; passed true.

- `exact-fold-witness`: the family's pre-source exact Fold construction reproduces; passed `true`.

Scientific meaning. This closes the exact foundational relation stated above within its declared positive-finite grammar. Earth-specific dimensional magnitudes remain source-, place-, time-, instrument- and protocol-bounded observation records rather than fitted proof parameters.

Field observations, remote sensing, proxy reconstruction, model assimilation and forecasts are separate evidence classes. Hazard, exposure, vulnerability, capacity and consequence remain different carriers. Forecast success cannot admit an opaque relation, and a model output cannot be relabelled as observation.

Adverse controls.

74. Hazard, risk, resilience and disciplinary handoff

Claim identity: SFT-EARTH-HAZARD-RISK-HANDOFF-001

Question and exact theorem. Earth Science owns the physical or environmental hazard record; risk composes exposure and vulnerability at explicit Social, Medicine and Engineering handoffs, while resilience retains recovery capacities and failures.

```
process-exposure-vulnerability-consequence-carrier__decision-context-bounded__hazard-to-impact-and-recovery-chain__event-probability-exposure-vulnerability-capacity-time-and-ownership-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule
```

Rooted dependency chain. The registration names SFT-ROOT-THERE-IS-NO-NOTHING, zero axioms and zero free or fitted parameters. It requires these already admitted receipts:

- SFT-FOUNDATION-ONE-001
- SFT-FOUNDATION-FOLD-001
- SFT-FOUNDATION-FOLD-DYNAMICS-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-BIO-ECOSYSTEM-001
- SFT-BIO-BIO-HANDOFF-001
- SFT-EARTH-ENVIRONMENTAL-QUALITY-001
- SFT-EARTH-FORECAST-VALIDATION-001

Every dependency precedes this claim in the admitted census and recursively reaches the premise-free root. A branch label, publication or consensus statement cannot substitute for that receipt graph.

Generated grammar. Generate the literal Cartesian product of eight registered binary carrier, boundary, relation, record, evidence, provenance, generality and extension dimensions before external Earth-source identities or outcomes are opened. Filter only by the preregistered property required by each dimension.

Boundary: Exactly eight binary preservation dimensions, giving 256 forms. Form closure is depth-independent under the stated positive-finite successor; empirical correspondence remains source, place, time, method and protocol bounded.

The literal eight-axis product contains 256 candidates, 256 stored candidate identities and 256 one-for-one decisions. Exactly one survives and 255 fail at least one required coordinate.

Axis	Eliminated form	Forced form	Exact elimination / retention basis
carrier	answer-only-or-unbounded-carrier	process-exposure-vulnerability-consequence-carrier	An answer-only value or unbounded object erases the Earth carrier. The complete claim-specific carrier is retained.
boundary	boundary-or-interface-erased	decision-context-bounded	Erasing the spatial, temporal or categorical boundary makes stocks, flows and observations incomparable. The exact observation and system boundary remains explicit.
relation	imported-fitted-or-missing-relation	hazard-to-impact-and-recovery-chain	An imported, fitted or absent relation can manufacture the intended Earth result. Only generated Fold relations and admitted upstream dependencies act.
record	favourable-output-with-incomplete-record	event-probability-exposure-vulnerability-capacity-time-and-ownership-held	A favourable output without stocks, transfers, time, missing and adverse records is not reconstructible. The complete required record is retained.
evidence	model-proxy-forecast-or-observation-conflated	evidence-class-explicit	Earth evidence classes cannot silently substitute for one another. Direct observation, retrieval, proxy, reconstruction, model and forecast remain distinguishable.
provenance	prior-target-consensus-or-application-selected	root-bound-forward-forcing	Earlier SFT answers, target values and consensus models cannot select a V3 law. Every result traces through admitted dependencies to There Is No Nothing.
generality	one-favourable-case-with-erased-alternatives	positive-finite-successor-retains-all-rows	One favourable site, event or interval cannot close a generated class. Every supplied finite extension retains favourable, adverse, absent and unresolved rows.
extension	free-parameter-exception-or-opaque-oracle	no-extra-rule	Fitting, exceptions and opaque predictors can force a preferred answer. No rule beyond the admitted dependencies and registered preservation conditions is added.

Unique survivor and depth independence. Sole survivor: process-exposure-vulnerability-consequence-carrier__decision-context-bounded__hazard-to-impact-and-recovery-chain__event-probability-exposure-vulnerability-capacity-time-and-ownership-held__evidence-class-explicit__root-bound-forward-forcing__positive-finite-successor-retains-all-rows__no-extra-rule .

Base: The least complete Earth carrier retains its boundary, relation, record, evidence class and root provenance without an extra rule.

Successor: Adding one lawful finite reservoir, interface, observation, event, time, species or location preserves all earlier identities, transfers, adverse rows and boundaries and appends the new trace.

Closure scope: depth_independent; minimality and named-shape uniqueness both pass.

Operational witnesses.

- carrier-present: the claim retains a nonempty named carrier; passed true.
- relation-distinct: the carrier and relation are not silently conflated; passed true.
- evidence-boundary: the evidence boundary remains distinct from the result carrier; passed true.
- exact-fold-witness: the family's pre-source exact Fold construction reproduces; passed true.

Scientific meaning. Hazard is not risk. Exposure, vulnerability, capacity and consequence are additional carriers whose ownership passes to social, medical and engineering branches at explicit boundaries.

Field observations, remote sensing, proxy reconstruction, model assimilation and forecasts are separate evidence classes. Hazard, exposure, vulnerability, capacity and consequence remain different carriers. Forecast success cannot admit an opaque relation, and a model output cannot be relabelled as observation.

Adverse controls.

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:bf4905122fe65dc3d4183eb3ab880cd9e87acd676f167e425bf43f2d51e49693.

Complete result and verification summary

The foundation contains exactly 74 admitted laws and 18,944 generated candidates. Exactly 74 forms survive. All 296 structural controls pass. Seventy-four independent implementations reproduce candidate order, decisions and sole survivor. Seventy-four post-seal comparisons pass at their declared boundary, while the mixed-catalogue earthquake test remains explicitly adverse inside the one quantitative claim. All three inherited atomic questions reconcile. Every dependency path reaches There Is No Nothing. The engine seal is

sha256:4f4cdd7986808e6a6102d650c85e6093d6425e49f14a5f05d70fa05e6031d46a; the authority seal is sha256:bf810a190b504f0f874a778a52e23251904b17b40a7364135e74b34e8ba0c3b8. Neither protected surface was modified.

The branch is current-evidence closed and extension-open, not permanently locked. New evidence or a new Earth relation may extend, correct or invalidate a claim only through the same public process: exact statement, frozen grammar, complete enumeration, unique survivor or preserved halt, independent reconstruction, adverse controls, purpose-matched evidence and unchanged-engine receipt.

Full-field continuation roadmap

This foundational edition is the dependency-safe base. Later versioned editions will extend, in order, through:

- complete solid-Earth, geodesy and geomagnetism census
- complete mineralogy, petrology, sedimentology, stratigraphy and palaeontology handoff
- complete geomorphology, soils and landscape dynamics
- complete hydrology, cryosphere, oceanography, atmosphere and meteorology
- complete climate, palaeoclimate, forcing, feedback and attribution
- complete ecology, biodiversity and coupled Earth systems
- complete pollution, toxic transport and environmental quality
- complete hazards, risk, resilience, resources and sustainability accounting
- complete Earth observation, data assimilation and forecast-validation census

Other planets and cosmic populations remain Astronomy and Cosmology-owned. Human-environment systems pass to Social and Collective Systems. Intervention design passes to Engineering Translation. Applications may test the laws but never select them.

Limitations

- This is the complete frozen Layer One foundation, not the complete Layer Two reconstruction of every Earth and environmental discipline.
- Seventy-three claims make structural and evidence-boundary comparisons; they do not pretend that site-, time-, instrument- or method-dependent magnitudes are universal constants.
- The earthquake exponent is the only exact quantitative natural-data prediction in this edition. Its first test is adverse and remains adverse; the independent homogeneous holdout is compatible and does not erase it.
- Bounded Earth-ionosphere modes are derived without a dimensional frequency prediction in this edition.
- The two-basin tipping witness is structural and explicitly makes no universal physical threshold claim.
- Twenty-four absent source features and one failed original transport remain visible. They are not support.
- External catalogues and documentation can change; this release binds captured bytes, source identities, dates and transport history.
- Current-evidence closure is revocable by lawful new evidence and does not constitute permanent ownership of knowledge.

Conclusion

Foundational Earth and Environmental Sciences is current-evidence closed and extension-open: 74 laws, 18,944 exact candidates, 74 sole survivors, 296 passing controls, 74 independent reconstructions, 74 post-seal comparisons and 3 of 3 inherited atomic obligations reconciled.

The scientific result is not a new opaque Earth model. It is the opposite: an exact constitution for what an Earth object, boundary, ledger, history, observation, prediction and adverse result must retain before it can become scientific evidence. It derives a quantitative earthquake exponent before measurement and preserves both its adverse first test and compatible holdout. It derives bounded recurrence without fitting a frequency and tipping structure without pretending that a mathematical half is a measured planetary threshold.

This is how Earth science remains empirical without becoming answer-selected. A sensor is not a law. A model is not an observation. A missing row is not zero. A forecast score is not derivation. An institutional label is not proof. Open criticism remains unrestricted; scientific admission is the reproducible act of satisfying the same public standard.

Complete current-census successor supplement

The authoritative current scope of this paper is 75 live model-admitted claims (earth_environment 75). Counts retained inside the preceding-version narrative describe the dated freeze at which those passages were written; this successor table and the machine census control the current total.

The preceding manuscript did not contain 1 later-admitted claim section(s). They are included below in dependency order so the successor covers the complete current branch surface.

Normalized Earth tipping Fold lock

Claim ID: SFT-EARTH-TIPPING-FOLD-LOCK-002

Exact statement: The two exact normalized basin carriers are the quarter-One and three-quarter-One preimages of half-One; dimensional thresholds remain system-specific measurements.

Dependency route: SFT-EARTH-EARTH-SYSTEM-TIPPING-001 -> SFT-FOUNDATION-HALF-ONE-001 -> SFT-MATH-DYNAMICAL-SYSTEMS-001

Candidate generator: Generate the complete eight-axis product for SFT-EARTH-TIPPING-FOLD-LOCK-002 and reconstruct its exact witness independently.

Grammar boundary: Every antipodal two-basin normalized Fold carrier with dimensional-threshold controls.

Complete census: 256 candidates; 1 unique survivor; 4 controls

Survivor: exact-positive-fold-parts-and-counts__quarter-three-quarter-common-half-one-lock__normalized-law-measured-correspondence-separate__complete-source-and-adverse-record__complete-declared-product__derivation-seal-before-target__favorable-adverse-absent-heterogeneous-unresolved__no-extra-rule

Exact result: Quarter-One and three-quarter-One are distinct basins, both Fold to half-One and together complete One. Crossing into the shared normalized lock takes one Fold. This does not assert one universal dimensional Earth threshold.

Closure: depth_independent; minimality True; named-shape uniqueness True

External status: independently_replicated

Engine receipt: sha256:3a8ebb9a7cc49c18c5615b8744e02128bcd6414c2300362b1f8458e2b78eec9a at receipts/engine/model_admitted/SFT-EARTH-TIPPING-FOLD-LOCK-002-3a8ebb9a7cc49c18.json

Preceding-version abstract preserved for chronology

The following abstract is reproduced from version 1.0.0. Its counts and status language describe that dated version and do not override the current abstract or census above.

This paper reports the current-evidence-closed, extension-open foundation of Earth and Environmental Sciences in the third clean-room Smithian Fold Theory reconstruction. Seventy-four obligations in twelve ordered families generate 18,944 exact candidate forms and decisions, seventy-four unique survivors, seventy-four depth-independent certificates, 296 passing adverse controls, seventy-four implementation-distinct reconstructions and seventy-four post-seal empirical-boundary comparisons. Every dependency chain reaches the single premise-free theorem, There Is No Nothing. The branch uses zero axioms, zero free or fitted parameters, no negative proof quantities, no irrational or imaginary proof values, no target-selected law and no opaque predictor.

The foundation reconstructs Earth-system identity, reservoirs, boundaries, stocks, flows, energy and matter ledgers, geological order and history, interior and geodynamic carriers, rupture and seismic records, volcanism, water and ice, atmosphere, weather, ocean, climate, biogeochemical cycling, environmental transport and quality, observational evidence classes and hazard handoffs. It explicitly distinguishes observation from retrieval, proxy, reconstruction, model and forecast; observed absence from non-detection, censoring and missingness; stock from flow; hazard from risk; and universal upstream law from contingent Earth history.

The quantitative headline is a pre-source exponent prediction for earthquake magnitude-frequency counts. Exact candidate enumeration uniquely selected exponent 1. The first global 2010-2020 mixed-magnitude catalogue was adverse: $N \geq 5/N \geq 6 = 18469/1494$ and its registered exceedance interval $0.076998990840681139-0.084918164588559525$ excludes $1/10$. That result remains adverse and unclassified. A separately preregistered homogeneous 2020-2026 mww holdout returned $N \geq 6/N \geq 7 = 253/27$, or $27/253$ exceedance; its interval $0.085657503235220589-0.13089188889528297$ contains $1/10$. The branch also

derives bounded distinct Earth-ionosphere recurrence modes without importing a dimensional frequency and derives a two-basin tipping structure while rejecting a universal physical half-threshold.

All 356 V1 rows and 407 V2 steps were atomically reviewed. The three Earth-owned prior questions are all reconciled to current receipts. Twenty-one post-seal external source identities contribute ninety-one preregistered features: sixty-seven are present and twenty-four are absent and preserved. One original failed transport remains recorded; an independently preregistered alternate transport is an addendum, not a silent replacement.

Scope and ownership boundary

This paper owns the `earth_environment` surface comprising 75 current claims. Ownership identifies responsibility for derivation and falsification; it does not prevent criticism or lawful cross-branch use. Application performance, consensus, credentials and Lean acceptance cannot transfer ownership or select a law.

Mathematical, computational and empirical constitutions

The mathematical constitution retains exact generated carriers, relations, candidate grammars, decisions, survivors and closure boundaries. The computational constitution retains executable identities, complete traces, controls, independent reconstructions and receipts. The empirical constitution retains source registration, transport, pre-seal and post-seal chronology, custody, measurement or observation, uncertainty, favourable and adverse rows, missingness, unresolved records and falsification conditions. None of these evidence classes substitutes for another.

Registered source surface

Human-readable scholarly references remain in the inherited paper. Machine source IDs, custodians, releases, locators, source captures, access outcomes, hashes and transport status remain in the current claim packages and external-source registries. Source prestige is not evidential authority; each source is used only in its registered role. The Lean source-binding gate checks custody and identity, not empirical truth by reputation.

Data and code availability

The successor Markdown is

`publications/successors/earth_environment/FROM_ONE_WORLD_TO_EARTH_PAPER_001_V1_1.md`
and its scientific predecessor is

`publications/current/earth_environment/FROM_ONE_WORLD_TO_EARTH.md`. The Lean sources and report are under `generated/lean4_validation/`; the report is `generated/lean4_validation/reports/whole_model_validation.json`. Current claims are indexed by `census/claims.json`; complete candidates, decisions, controls, certificates, observations and receipts remain under `claims/<claim-id>/` and `receipts/`. The paper's evidence map and draft deposit metadata sit beside the successor source. No remote action was performed.

Lean 4 independent verification update

Verified result

The pinned Lean toolchain `leanprover/lean4:v4.32.0` compiled the verification project and the executable verifier returned `PASS`. Its immutable report identity for this successor is

sha256:6b6a5a9a9a0b74687a6f97fb3b4fcc7455968e35c82395290837cda60d7501cf.

Verified surface	Result
Ordered census claims	2,777
Proof-bearing accepted claim gates	2,777
Source-bound claims	2,777
Candidate records	898,902
Decision records	898,902
Passed controls	11,108
Registered branches	17
Issues	0

This paper's registered branch surface contributes **75** of the accepted claims.

Native theorem proof and artifact verification are different layers

`SFTValidation/Root.lean` formalises the exact registered two-member operational grammar:

`unpresentedAbsence` and `presentedOccurrence`. The decision function rejects the former and accepts the latter.

Lean proves existence by the accepted constructor and uniqueness by exhaustive case analysis over the two constructors.

`#print axioms` reports no imported or user-declared axioms for the exported root theorems. This is a kernel-checked proof of the unique survivor inside the exact registered operational grammar.

`SFTValidation/Gates.lean` defines twelve Boolean acceptance obligations and can construct an inhabitant of `ClaimGate.Accepted` gate only when all twelve equal `true`. The runtime verifier then parses the complete ordered census and execution manifest, recomputes identities, cardinalities, one-to-one decision coverage, survivor count, controls, closure fields, empirical boundaries, certificate bindings and authoritative receipts, and calls that proof-bearing constructor for every current claim.

The exact scientific statements of the other claims are not all re-expressed as 2,776 separate Lean propositions in this version. They are validated as the repository's complete registered machine artifacts through Lean-executed checks. The source-manifest gate uses a read-only Python bridge solely to instantiate the already registered source factories; Lean consumes the result. This layer does not replace the protected admission engine, does not write receipts and does not substitute for source experiments or empirical replication.

Fail-closed custody event

The first whole-model run halted on six source-capture byte hashes. The discrepancy was traced to line-ending normalisation in the working tree, not to a changed scientific target or a failed theorem. The registered source bytes were restored, exact-byte Git attributes were added for those six captures, all 385 registered external source bindings were re-audited with no mismatch, and the unchanged Lean verification was rerun to `PASS`. The preserved halt demonstrates that source drift is detected rather than silently forgiven.

What the result supports

The result materially strengthens the model's case for formal coherence, exhaustive current-census coverage, unique-survivor enforcement, dependency and provenance integrity, cross-branch consistency and reproducibility by an implementation outside the admission engine. It does not by itself establish that every empirical claim is true in nature, that the registered grammar is the only conceivable grammar outside its stated boundary, or that SFT is superior to every rival theory. Those questions remain governed by the papers' declared experiments, falsification conditions and comparative tests.

Successor conclusion

Version 1.1.0 preserves the preceding paper's derivations, evidence classes, corrections, adverse and unresolved records, ownership limits and open frontier, while integrating the independent Lean 4 result and every later current claim in its declared scope. This paper contributes 75 current claim(s) within `earth_environment` to the total dependency spine.

The new formal result establishes that the registered two-class operational root has one Lean-proved survivor and that all 2,777 current claims satisfy the proof-bearing artifact gates. The major conflation resolved by this update is between native theorem proof and whole-repository artifact verification: both are valuable, but they are not the same evidential act. No empirical status is strengthened merely because the artifact graph passes, and no historical halt or correction is erased.

The current evidence therefore establishes formal coherence, current-census completeness, unique-survivor enforcement and intact source, dependency, certificate and receipt custody for this version. Field-specific empirical conclusions remain exactly those authorised by their current records. Lawful discovery, falsification, stronger evidence and versioned extension remain open, and publication itself remains pending Maria Smith's explicit confirmation.
