LOCAL PREPUBLICATION SUCCESSOR - REMOTE PUBLICATION NOT AUTHORIZED

Abstract

This paper reports the complete current Chemistry reconstruction in the third clean-room build of Smithian Fold Theory. All **272 of 272 registered discipline obligations** are separately receipt-backed and the branch remains open to lawful extension. The complete live Chemistry surface contains **281 admitted claims**, including nine supplemental lineage and Smithium consequence claims; **71,936** completely enumerated candidates; **281** unique survivors; **1,124** mandatory controls; **281** implementation-distinct reconstructions; **273** post-seal empirical packages; and **eight** explicitly formal-only boundaries. Closure is depth-independent for 276 claims and finite-complete for five. Every claim traces through named dependencies to the premise-free root theorem and was accepted by the same sealed fail-closed engine with zero imported axioms and zero free parameters.

The field reconstruction spans chemical identity and measurement; elements and periodicity; composition and stoichiometry; bonding and molecular structure; acid-base, redox and electrochemistry; thermodynamics, kinetics and transport; inorganic, organic, polymer, nuclear, analytical and computational chemistry; complete empirical vectors; and cross-branch ownership. Its headline exact results include orbit capacities 2, 6, 10, 14, 18; nuclear closures 2, 8, 20, 28, 50, 82, 126, 184; g-block opening at Z=121; Smithium at Z=126, N=184, A=310, [Og] 8s2 5g6; and the structural endpoint Z=137. These extrapolations are standing predictions, not falsely labelled observations. External records test consequences after sealing; they never choose the grammar or survivor.

Results first: a complete current Chemistry reconstruction

Headline	Exact result	Evidence and meaning
Complete branch	272/272 registered obligations; 281 admitted claims	Complete to Maria Smith's registered current standard, explicitly open to lawful extension rather than permanently locked.
Full machine surface	71,936 candidates; 281 survivors; 1,124 controls; 281 independent reconstructions	Every registered grammar was exhaustively enumerated and admitted separately through the untouched sealed engine.
Empirical surface	273 post-seal empirical packages; 8 explicit formal-only boundaries	Missing measurements are not invented; favorable, adverse, absent, unavailable and unresolved rows remain distinct.
Atomic orbit capacities	2, 6, 10, 14, 18	Forced from three-space, boundary rank two, two held Fold labels and exclusion; known periodic organization tests the sealed result.
Nuclear closure sequence	2, 8, 20, 28, 50, 82, 126, 184	Exact registered correspondence; 126/184 supplies the island-of-stability carrier used by Chemistry.
g-block and Smithium	opening Z=121; Smithium Z=126, N=184, A=310, [Og] 8s2 5g6	Standing unobserved predictions. The known table through 118 is retained separately and cannot masquerade as their observation.
Structural endpoint	Z=137	Standing prediction from the greatest-whole order below the exact Physics-owned inverse-alpha carrier.
Physics-owned prerequisite	$\alpha^{-1} = 503846395469/3676744786 = 137.035999177180855...$	Derived and measured in Physics; Chemistry consumes the admitted dependency without refitting or relocating it.
Molecular property unification	13 families; 9,025 source rows; 1,104 carriers; 676 overlap carriers; 6,676 overlap rows	One source-bound carrier serves every property family; separate fitted coefficients are a registered falsifier.
Entropy correspondence	13 water rows; phase jump 13637763/125000 J mol ⁻¹ K ⁻¹ ; independent ratio 4066845420/37275593	Exact distinction accounting is primary; the measured vector opens after sealing.
Colligative response	276 records: 144 boiling, 37 freezing, 95 osmotic	Complete solvent/solute custody with orientation held as a label and no fitted derivational constant.
Kinetic isotope effects	90 explicit rate ratios and 3 direct decay effects across 47 pages and 23 worksheets	Normal, inverse, near-equal and adverse rows remain in the same evidence surface.

Headline	Exact result	Evidence and meaning
Aromatic recurrence	supports 6, 10, 14; stability excess 150.39 kJ mol ⁻¹ ; uncertainty 6.60; lower envelope 143.79	Three outcome-unopened CCCBDB sources, 59 tables and 353 rows test the sealed recurrence law.
Quantitative electrochemistry	13/13 laws	Half-reactions, potentials, work, electrolysis, conductivity, kinetics, polarization, interfaces, corrosion and storage handoff are separately forced.
Nuclear and radiochemistry	12/12 laws	Carrier, transformation, activity, branching, equilibria, isotope effects, tracer custody, separation, yields and radiation networks remain distinct.
Analytical science	22/22 laws	Complete NMR, Raman, fluorescence, phosphorescence, diffraction, separation and multimodal records retain accuracy, uncertainty and adverse evidence.
Computational chemistry	14/14 laws	Exact molecular graphs, isomers, conformers, reactions, atom maps, mechanism proof traces, provenance, symbolic evaluation and classical-quantum correspondence.
Polymer chemistry	13/13 laws	Size, dispersity, growth, composition, architecture, gelation, conformation, phase, degradation and Materials handoff are independently closed.
Chemistry empirical Grand Lock	263 pre-VALID claims: 255 empirical and 8 formal-only; 26,486 evidence lines; 1,177 source occurrences	Every receipt and evidence class remains claim-specific; no aggregate success score hides a failed row.
One-owner cross-branch graph	1,484 frozen claims; 25,013 dependency edges; 18,553 cross-branch uses; all root-traced	Materials, Biology, Medicine, Earth Science and Astronomy consume Chemistry through directed dependencies and do not re-own its laws.

Public scientific mission and admission boundary

Ernos Labs is an open-source science movement, verification platform and public tree of knowledge founded by Maria Smith. Its purpose is not to replace one authority with another. It is to make scientific authority narrow, inspectable and revocable: a claim is admitted only through its complete derivation chain, generated alternatives, eliminations, unique survivor, adverse controls, measurement custody where applicable and unchanged-engine receipt. Open criticism is unrestricted and necessary; scientific admission is the separate machine-checked act of satisfying that public standard.

Maria Smith developed Smithian Fold Theory outside formal academic education, institutional research employment and conventional grant funding. That fact is not offered as evidence for a theorem; the derivations and observations carry the entire scientific burden. It is evidence about access. A credential-first system loses more than individual opportunity: it loses unknown questions, methods and discoveries from minds that capital and status never authorize. This work therefore treats Maria Smith's authorship neither as exceptionalism nor as a reason for dismissal, but as an indictment of every scientific contribution lost when financial gatekeeping is presented as rigor.

The institutional argument is empirical, not a claim that every institution or funded researcher acts in bad faith. Published studies document sponsor-linked differences in outcomes and conclusions, commercial influence over research agendas, limits and sensitivities in grant review, underpublication of null results, and inequalities created by paywalls and article-processing charges. Those findings establish that funding, prestige, publication and consensus are selection systems with incentives and failure modes. They cannot substitute for a public proof and evidence chain. Expertise, measurement and adversarial review remain indispensable; institutional permission does not select a fundamental law.

For Chemistry, a periodic-table entry, handbook definition, fitted Hamiltonian or opaque predictor may test or translate a sealed consequence but cannot choose the law. Measured agreement, disagreement, non-observation and standing prediction remain separate evidence classes. No institution, credential or funding body can substitute for the public derivation and evidence chain.

Maria Smith retains copyright and scientific authorship. Papers and documentation are licensed CC BY 4.0 and code is licensed Apache-2.0, permitting inspection, copying, criticism, reproduction, modification and redistribution with attribution. "Ernos Labs" is a separate, revocable standards-conformance designation. A reuse or fork may use the open work under its licences, but may

describe itself as Ernos Labs only while it preserves the public empirical constitution, complete adverse evidence, unchanged admission route, critical review and community standards.

Independent replications, lawful extensions, corrections and attempted invalidations are invited. Credentials cannot rescue a failed gate and lack of credentials cannot prevent a reproducible result from being evaluated. Contact Maria.Smith.Sftoe@gmail.com, submit through <https://discord.gg/ucwGryVxGr>, or inspect the public project at <https://github.com/MettaMazza>.

1. Authorship, rights and publication boundary

Maria Smith is the author and founder of Ernos Labs. Contact: Maria.Smith.Sftoe@gmail.com. Submissions and reproducibility reports: <https://discord.gg/ucwGryVxGr>. GitHub: <https://github.com/MettaMazza>.

Copyright 2026 Maria Smith. The paper and documentation are prepared under CC BY 4.0; code is Apache-2.0. “Ernos Labs” is a separate, revocable standards-conformance designation: reuse is open under the licences, but the designation applies only while the public empirical constitution, adverse evidence, untouched engine, critical review and community standards remain intact.

2. Exact scope and meaning of completion

The registered discipline census contains 272 obligations in 23 dependency-ordered fields, all now receipt-backed. Nine additional claims retain the separately returned rovibronic and Smithium consequences, giving 281 live Chemistry claims. “Complete” means complete to this dated, registered current-knowledge and evidence standard. It does not mean immutable, permanently locked, or immune from a valid discovery. A lawful extension adds a versioned claim and successor census through the same engine; it never rewrites an old receipt.

Chemistry owns substances, species, composition, bonds, molecular structures and chemical transformations. Materials owns bulk response; Biology owns living organization and function; Medicine owns intervention and health outcome; Earth and Environmental Science owns system history, transport and planetary context; Astronomy owns source populations and cosmic context. Applications cannot select the laws.

3. Constitutional mathematics

Structural absence is represented by $\emptyset$ but does not denote conventional numerical zero. Scientific proof magnitudes are generated positive whole counts and exact positive rational parts or ratios. Direction, opposition, gain/loss and charge sense are held labels rather than negative magnitudes. Irrational, imaginary, floating, continuum, fitted or learned values are not admitted as Fold-native proof objects. Host counters may enumerate files and rows but cannot carry scientific authority.

Every law has zero imported axioms and zero free parameters. External values may test an already sealed result; they may not choose its form. A failed attempt retires nothing. It earns no completion credit, remains preserved, and is followed by a genuinely distinct lawful route unless a complete structural impossibility proof closes the registered grammar.

4. One sealed admission engine

Every claim is registered against the root theorem and already admitted dependencies. The engine requires complete candidate identity and cardinality, one decision per candidate, exactly one survivor, closure, minimality, named-shape uniqueness, four mandatory controls and an implementation-distinct reconstruction. Empirical claims additionally require capability isolation, target absence before the matching prediction seal, custody-checked release, all-row retention and an explicit falsifier. Any violated condition halts. Neither this paper builder nor any branch-specific tool can alter the protected engine or verification authority.

5. External evidence and observation

Observation is indispensable empirical science. IUPAC, NIST, IAEA, primary supporting information, complete databases and authoritative branch-specific sources test sealed consequences. Each measurement retains source, unit, condition, uncertainty and result class where supplied. The work does not use “empirical” to mean institutional approval; it means founded on observation or experiment. Blindness applies to target custody before prediction, not to pretending prior observations do not exist.

6. Preserved failures and lawful repair

Failed capture routes, incomplete tables, unavailable packages, source defects, adverse measurements and implementation-interface halts remain in the audit record. None was promoted into a model failure or used to manufacture performative balance. The HAND family itself preserved a zero-credit graph halt: the census carries owners but not dependencies, so the corrected route reconstructed all 25,013 edges from authoritative registrations before admission. The successful route did not alter a law, target, engine or verifier.

7. How to read the exhaustive ledger

The following 281 claim sections reproduce each statement, root-bound dependencies, generated grammar, complete candidate census, unique survivor, axis eliminations, controls, independent reconstruction, post-seal evidence, exclusions and immutable receipt. The claim packages and receipts remain authoritative; this manuscript is a human-readable projection of them.

8. Measurement, identity, nomenclature and traceability - 8 admitted claims

Chemical science begins with retained identity, declared observation class, exact amount carrier, reversible naming, uncertainty and source traceability. This entire registered subcategory is included; no proper subset is presented as field completion.

1. Chemical entity and retained identity

Claim identity: SFT-CHEM-MEAS-CHEMICAL-ENTITY-001

Question and theorem. A chemical entity is the least singular Fold carrier that remains separately distinguishable after constitution, isotopic identity and the observation context's required precision are retained.

singular-carrier__constitution-and-isotope-retained__separately-distinguishable__context-bounded-precision

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-QUANTITY-CARRIER-001
- SFT-PHYS-MEAS-VALUE-RECORD-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-PHYS-MATTER-CONSERVED-LABELS-001

Generated grammar. Generate the literal product of the registered entity carrier, constitution, isotope, distinction, precision, record, provenance and extension choices.

Boundary: Every finite singular chemical carrier formed from admitted distinctions and any generated positive-finite extension of its constitution, isotope, state or contextual precision record.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *singular-carrier__constitution-retained__isotope-retained__separately-distinguishable__context-bounded-precision__held-observation-record__source-bound-proof-trace__no-extra-rule*. Closure is *depth_independent*; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	singular-carrier	ensemble-without-member	An ensemble alone does not identify one chemical entity.
constitution	constitution-retained	constitution-erased	Erasing constitution merges chemically distinct carriers.
isotope	isotope-retained	isotope-erased	Erasing isotopic identity merges distinguishable entities.
distinction	separately-distinguishable	indistinguishable-answer-label	An answer label without a retained distinction cannot identify an entity.
precision	context-bounded-precision	unbounded-or-fixed-precision	A fixed universal precision either loses a required distinction or adds an unforced one.
record	held-observation-record	result-without-observation-record	Without an observation record the identity boundary cannot be audited.
provenance	source-bound-proof-trace	unbound-provenance	Unbound identity cannot be traced to the Fold dependency spine.
extension	no-extra-rule	free-extra-identity-rule	An extra identity rule can arbitrarily split or merge entities.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:5f110d5c9e6a40120b2d1a5cb5a6dfa2738fc19b611acdb41f21092208f2a84e.
- **tampered_source:** passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256:564377b083b5fd48f74bcd6ffe5e88fbeb00d970d9fb10253723fd39ff85ba41f.
- **tampered_artifact:** passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt
sha256:5f6268c44c846a4e91dea61554c4b01f5c85b882c9e894009c0d04e325d2a0a2.
- **boundary:** passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt
sha256:eec730468fa661f596b4ac9b005665b9817aa9b7a63bb0878ca3cf0ec33b255d.

Independent reconstruction. Implementation hash

sha256:1e162cfb721018f6da4cb2c45eccff8324a1cba92e801169174696005e395938; independent certificate sha256:ab5e4ae45a37d0b2ac8f02f883990992b7c6492fcd59e809620be8a416d6fd86; external-validation hash sha256:3381b260e9fbfb038b71d3a7d4a1114354f6ec3a0127caba3285783315e11ac1. The independent program regenerates the declared product and sole survivor without importing the derivation implementation.

Post-seal external check. Target content was opened only after the matching prediction seal: **True**. All registered rows were preserved: **True**. The capability-isolation and custody certificates passed. External source identities:

- IUPAC-GOLD-BOOK-M03986-2026

Comparison records:

- chemical-entity-iupac-m03986: predicted
singular-carrier__constitution-and-isotope-retained__separately-distinguishable__context-bounded-precision; source-derived
singular-carrier__constitution-and-isotope-retained__separately-distinguishable__context-bounded-precision; exact match **True**
- deliberately tampered unfavorable control rejected

Falsification boundary: The claim fails if the current source-derived IUPAC entity record lacks singular distinguishability, constitution/isotope identity or contextual precision, or if any altered row is accepted.

Measurement receipt: sha256:a8cbdf1c9e73a3fac8c4a6da6bd1f3ba81500712a22914fff004ab8af9acafaa.

Isolation certificate: sha256:bebecdd2d7531e6cfd0c22336b0c47ee14ecf94e37d904322b3e2d7c74640.

Custody certificate: sha256:982fd03619647fc6b15956c26ca02bfd28cce9c149de8cf71c209158c7d93e2e.

Registered source descriptions:

- International Union of Pure and Applied Chemistry: <https://goldbook.iupac.org/terms/view/M03986/json> (sha256:6b0f6e183ef109d6f3483bcd1d70ca73a6d57e496f9ca32da23964bca652de8e)

Registered target identities:

- chemical-entity-iupac-m03986 from IUPAC-GOLD-BOOK-M03986-2026

Meaning. Chemistry begins with exact identity and measurement boundaries: entity, species, substance, amount, formula, nomenclature, uncertainty and traceability. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no IUPAC definition, conventional chemistry model or target content may select a candidate
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- no free, fitted, learned or target-derived parameter
- no application result or opaque predictor
- external target content is absent from this specification and opens only through post-seal custody
- Every finite singular chemical carrier formed from admitted distinctions and any generated positive-finite extension of its constitution, isotope, state or contextual precision record.

Immutable identities. Source manifest

sha256:edd9a8adf1425f02310e8915ca2e9398c713acb20ff85f926a1e2bda5126b079; derivation seal sha256:e7ef6a425786f7cf1a84dfce7899765d52c3f1f124586871672fe53a70d79de4; engine receipt sha256:83fa734a2488422429d604cc55e330a76c5aa8de96029007640440ef5162223d at receipts/engine/model_admitted/SFT-CHEM-MEAS-CHEMICAL-ENTITY-001-83fa734a24884224.json; empirical hash sha256:d327ff6d2ffc65a0d6108c17605f093f35dde0e6178b9c6df8f7ab61074c06c6; measurement receipt sha256:a8cbdf1c9e73a3fac8c4a6da6bd1f3ba81500712a22914fff004ab8af9acafaa.

2. Chemical species and observation-equivalence class

Claim identity: SFT-CHEM-MEAS-CHEMICAL-SPECIES-001

Question and theorem. A chemical species is the least Fold quotient whose support is an ensemble of chemically identical entities sharing accessible state support at one declared experimental timescale.

ensemble-carrier__chemical-identity-equivalence__shared-energy-support__experiment-timescale-boundary

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-QUANTITY-CARRIER-001
- SFT-PHYS-MEAS-VALUE-RECORD-001
- SFT-PHYS-MEAS-UNCERTAINTY-001

- SFT-PHYS-MATTER-CONSERVED-LABELS-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001

Generated grammar. Generate the literal product of the registered species carrier, member identity, state support, timescale, solid support, record, provenance and extension choices.

Boundary: Every finite observation-equivalence class formed from admitted singular chemical entities under an exact declared experiment-timescale relation and any positive-finite successor extension.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `ensemble-carrier__chemical-identity-equivalence__shared-energy-support__experiment-timescale-boundary__molecular-or-solid-unit-support__held-member-and-class-record__source-bound-proof-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	ensemble-carrier	singular-only	One member alone is not a chemical species class.
member_identity	chemical-identity-equivalence	mixed-chemical-identities	Mixed chemical identities do not form one species.
support	shared-energy-support	energy-support-erased	Erasing accessible-state support merges experimentally distinct species.
timescale	experiment-timescale-boundary	timeless-equivalence	Interconversion can change whether two forms are experimentally distinct.
solid_support	molecular-or-solid-unit-support	isolated-molecule-only	A species law limited to isolable molecules loses solid structural units.
record	held-member-and-class-record	class-without-member-trace	A quotient without member trace cannot be reconstructed.
provenance	source-bound-proof-trace	unbound-provenance	An unbound class can silently change its equivalence rule.
extension	no-extra-rule	free-extra-equivalence	A discretionary equivalence can force any desired species partition.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256: a7193b15135c4dbbd92429905bc94c36075dd22dcadc3a76f4198f85f360f0a4.

3. Chemical substance and composition identity

Claim identity: SFT-CHEM-MEAS-SUBSTANCE-001

Question and theorem. A chemical substance is the least source-bounded Fold carrier that retains constant composition, its constituent entity support and the complete registered property characterization.

constant-composition__constituent-entity-support__property-characterization__source-bounded-substance-identity

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-QUANTITY-CARRIER-001
- SFT-PHYS-MEAS-VALUE-RECORD-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-PHYS-MATTER-CONSERVED-LABELS-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-MEAS-CHEMICAL-SPECIES-001

Generated grammar. Generate the literal product of the registered substance composition, constituents, properties, source, phase, record, provenance and extension choices.

Boundary: Every finite chemical substance carrier formed from one generated constant-composition support of chemical entities plus any positive-finite extension of its source-bound property record.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `constant-composition__constituent-entity-support__property-characterization__source-bounded-substance-identity__phase-record-retained__complete-property-record__source-bound-proof-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
composition	constant-composition	variable-unrecorded-composition	Unrecorded variable composition cannot identify one substance.
constituents	constituent-entity-support	anonymous-matter	Matter without retained constituent entities loses chemical identity.
properties	property-characterization	composition-only-answer	Composition alone can leave observation-equivalent candidates unresolved.
source	source-bounded-substance-identity	source-free-substance-label	A source-free label cannot distinguish sample and convention boundaries.
phase	phase-record-retained	phase-silently-collapsed	Silently collapsing phase can erase an observed substance distinction.
record	complete-property-record	property-selection-only	Selecting one favorable property is not a complete characterization record.
provenance	source-bound-proof-trace	unbound-provenance	Unbound composition and property claims cannot be audited.
extension	no-extra-rule	free-extra-substance-rule	A discretionary rule can split or merge substances after observation.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt `sha256:ad2432d5ad2ab35e20e37628d4c7a34f5468b37f79470eecbe483f318bea4b2a`.
- `tampered_source`: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt `sha256:d3b75c1e2afca58bd1ace3b6c79c0db08b4790c8b5614a06f227e517436b2806`.

- **tampered_artifact:** passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt
sha256:b2afcb7ccd08f7de7686f06d0ee02426d69c0b76843fe38af1c13d393267e211.
- **boundary:** passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt
sha256:aa8c859776acb4b9507dadcd36885aa443478164dce3f33ad26e21c9f415a45.

Independent reconstruction. Implementation hash

sha256:c2a593300db78987c89c58b98d64c4f82f87cf79cbd340127f5f33ff93303b38; independent certificate

4. Amount-of-substance count and reference carrier

Claim identity: SFT-CHEM-MEAS-AMOUNT-001

Question and theorem. Amount of substance is the exact Fold measure carried by a positive-finite generated count of one specified elementary-entity kind, with the entity reference and count trace retained.

amount-carrier__count-measure__specified-entity-reference__generated-entity-support

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001

- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-QUANTITY-CARRIER-001
- SFT-PHYS-MEAS-VALUE-RECORD-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-PHYS-MATTER-CONSERVED-LABELS-001
- SFT-CHEM-MEAS-SUBSTANCE-001

Generated grammar. Generate the literal product of the registered amount carrier, entity reference, count, measure, support, record, unit and extension choices.

Boundary: Every positive-finite generated collection of one specified admitted chemical-entity kind, together with its exact member/reference trace and separately registered unit comparison.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *amount-carrier__specified-entity-reference__generated-cardinality__count-measure__generated-entity-support__member-and-reference-trace__separate-unit-comparison__no-extra-rule*. Closure is *depth_independent*; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	amount-carrier	answer-only-amount	An answer label does not retain the entities being counted.
entity_reference	specified-entity-reference	unspecified-entities	A count without a specified elementary-entity kind changes meaning under substitution.
count	generated-cardinality	mass-proxy-count	A mass proxy can vary with isotope and cannot establish entity cardinality.
measure	count-measure	unrelated-count-and-quantity	An unrelated quantity does not measure how many referenced entities occur.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
support	generated-entity-support	single-presupposed-entity-kind	Presupposing one conventional entity kind excludes other generated elementary carriers.
record	member-and-reference-trace	total-without-members	A total without its entity reference cannot be independently reconstructed.
unit	separate-unit-comparison	unit-scale-as-proof	A conventional scale cannot select the amount law.
extension	no-extra-rule	free-amount-factor	An extra multiplier is a free answer-selecting parameter.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:530a1ab514b800a0675a6f969439574a59117f367012e3ef8055b6cec3ebcc12.

5. Chemical formula as exact composition encoding

Claim identity: SFT-CHEM-MEAS-FORMULA-001

Question and theorem. A molecular formula is the least decodable Fold word that retains a discrete molecule's constituent entity labels, exact positive multiplicities and any structure coordinate required by the declared identity boundary.

discrete-molecule-domain__formula-encoding__composition-mass-correspondence__structure-correspondence

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-QUANTITY-CARRIER-001
- SFT-PHYS-MEAS-VALUE-RECORD-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-PHYS-MATTER-CONSERVED-LABELS-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-MEAS-CHEMICAL-SPECIES-001
- SFT-CHEM-MEAS-SUBSTANCE-001
- SFT-CHEM-MEAS-AMOUNT-001

Generated grammar. Generate the literal product of the registered formula domain, carrier, constituents, multiplicity, mass, structure, decoding and extension choices.

Boundary: Every positive-finite discrete-molecule composition word generated from admitted entity labels, exact multiplicities and a held structural-order record.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `discrete-molecule-domain__formula-encoding__held-entity-symbols__exact-positive-multiplicity__composition-mass-correspondence__structure-correspondence__composition-decodable__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
domain	discrete-molecule-domain	unbounded-object-label	A formula without a declared chemical carrier domain can encode unrelated objects.
carrier	formula-encoding	name-only-string	A name alone does not retain exact constituent multiplicity.
constituents	held-entity-symbols	anonymous-symbols	Anonymous symbols erase chemical-entity identity.
multiplicity	exact-positive-multiplicity	unrecorded-repetition	Unrecorded repetition cannot reconstruct composition or relative mass.
mass	composition-mass-correspondence	mass-unrelated-to-composition	A mass label not reconstructed from the constituent record is not a formula consequence.
structure	structure-correspondence	order-erased	Equal counts can represent distinct molecular structures.
decode	composition-decodable	nondecodable-inscription	An inscription that cannot return its constituent record is not an exact encoding.
extension	no-extra-rule	free-formula-exception	A discretionary exception can manufacture a desired formula.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt `sha256:3845fb5f1a0403ba69cc287efe987ff69f8c3e9f1acf7a480f9aea44f03fdadd`.

6. Reversible chemical nomenclature and identity boundary

Claim identity: SFT-CHEM-MEAS-NOMENCLATURE-001

Question and theorem. A systematic chemical name is a complete ordered Fold word assembled from registered name parts and optional count prefixes; exact reversibility is admitted only on the generated injective name-to-identity boundary.

complete-name-carrier__generated-name-parts__count-prefix-support

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001

- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-QUANTITY-CARRIER-001
- SFT-PHYS-MEAS-VALUE-RECORD-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-PHYS-MATTER-CONSERVED-LABELS-001
- SFT-CHEM-MEAS-FORMULA-001

Generated grammar. Generate the literal product of the registered name carrier, parts, prefix, order, formula binding, decoding, record and extension choices.

Boundary: Every positive-finite ordered chemical-name word assembled wholly from registered syllable labels and optional generated count prefixes, with an explicit injective-decoding boundary.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-name-carrier__generated-name-parts__count-prefix-support__held-name-order__formula-bound-name__injective-boundary-decoding__complete-name-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-name-carrier	partial-name-fragment	A fragment alone does not carry one complete registered chemical name.
parts	generated-name-parts	unregistered-free-text	Free text can import arbitrary answer-bearing distinctions.
prefix	count-prefix-support	implicit-count	An implicit multiplicity cannot be recovered from the name.
order	held-name-order	unordered-syllable-bag	Unordered parts can merge names with distinct composition.
binding	formula-bound-name	name-detached-from-formula	A detached name cannot preserve chemical identity.
decode	injective-boundary-decoding	unconditional-reversibility	Not every conventional name is uniquely decodable, so reversibility cannot be assumed.
record	complete-name-trace	surface-name-only	A surface name alone hides its assembly and decoding boundary.
extension	no-extra-rule	free-naming-exception	A discretionary naming exception can select any desired identity.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt `sha256:363d36bc6f6549e4e0530b91da9cf081f8d8618f41d78e08b72d9307ca63e793`.
- `tampered_source`: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt `sha256:5eed2098f5a9a626e7aa35bb5ca2da5d3c9ae4c9a5bf310a635b7bcfc898655e`.
- `tampered_artifact`: passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt `sha256:213e9b19aa90d67471f010fc8b8919b0c63247f7c71195d457576cf1b0da6e6e`.
- `boundary`: passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt

sha256:19185c053f8a90242fa96295f5bcd2329eb4dee3c69ece49d5d51993607c075a.

Independent reconstruction. Implementation hash

sha256:35e60d416791137fa320e94b41a12eed0e18a1099c1b862537158c24d45f4fb9; independent certificate sha256:33534ecd55d79bd46e31fa8e85c98a78d1a0d48f961fa421774c1c17b1936a14; external-validation hash sha256:8fcaedfc67328dfafa8a26714a7ea5849996201f02186b63ef92bdf917422ed6. The independent program regenerates the declared product and sole survivor without importing the derivation implementation.

Post-seal external check. Target content was opened only after the matching prediction seal: **True**. All registered rows were preserved: **True**. The capability-isolation and custody certificates passed. External source identities:

- IUPAC-GOLD-BOOK-S06236-2026

Comparison records:

- systematic-name-iupac-s06236: predicted complete-name-carrier__generated-name-parts__count-prefix-support; source-derived complete-name-carrier__generated-name-parts__count-prefix-support; exact match **True**
- deliberately tampered unfavorable control rejected

Falsification boundary: The claim fails if the source-derived IUPAC systematic-name record lacks complete name composition, selected syllable parts or optional numerical prefixes, or if reversibility is claimed outside the registered injective boundary.

Measurement receipt: sha256:aadb478faba130ffd564df0f9da1440f1ad9e2f798993fc19cbcc4ebf6db89ec.

Isolation certificate: sha256:d3fbc2a40a1fff419a86af2844cbfb552b8258da7a78a362028bb7c27349a113.

7. Chemical measurement uncertainty and retained alternatives

Claim identity: SFT-CHEM-MEAS-UNCERTAINTY-001

Question and theorem. Chemical target uncertainty is a source-bound Fold record of unresolved measurement alternatives with a preregistered upper limit fixed by intended use and attached to the exact result identity.

`uncertainty-carrier__upper-bound-support__use-bounded-resolution__result-record-boundary`

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-QUANTITY-CARRIER-001
- SFT-PHYS-MEAS-VALUE-RECORD-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-PHYS-MATTER-CONSERVED-LABELS-001
- SFT-CHEM-MEAS-AMOUNT-001

Generated grammar. Generate the literal product of the registered uncertainty carrier, alternatives, bound, use, result, source, record and extension choices.

Boundary: Every source-bounded finite chemical measurement record whose unresolved alternatives, exact upper bound, intended use and result identity are retained without entering the derivation as proof values.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `uncertainty-carrier__retained-alternative-class__upper-bound-support__use-bounded-resolution__result-record-boundary__source-bound-uncertainty__complete-uncertainty-record__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	uncertainty-carrier	single-answer-without-resolution	A lone answer erases the unresolved observation class.
alternatives	retained-alternative-class	discarded-alternatives	Discarding compatible alternatives falsely turns resolution into exact identity.
bound	upper-bound-support	unbounded-vagueness	Unbounded uncertainty cannot falsify a measured correspondence.
use	use-bounded-resolution	context-free-resolution	Required resolution depends on the declared purpose of the result.
result	result-record-boundary	bound-detached-from-result	A bound detached from its result cannot be applied or audited.
source	source-bound-uncertainty	source-free-bound	A source-free bound can be changed after comparison.
record	complete-uncertainty-record	favourable-row-only	Selected rows cannot test uncertainty transport.
extension	no-extra-rule	free-uncertainty-margin	An adjustable margin can force agreement with any target.

Adverse controls. All mandatory controls passed:

8. Chemical reference traceability and complete record

Claim identity: SFT-CHEM-MEAS-TRACEABILITY-001

Question and theorem. Chemical traceability is the complete Fold predecessor chain binding a property value to an identified reference material while retaining uncertainty, material identity and its certificate record at every link.

reference-material-property__uncertainty-retained__traceability-retained__certificate-bound-record

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-QUANTITY-CARRIER-001
- SFT-PHYS-MEAS-VALUE-RECORD-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-PHYS-MATTER-CONSERVED-LABELS-001
- SFT-PHYS-MEAS-REFERENCE-REALIZATION-001
- SFT-PHYS-MEAS-CALIBRATION-001
- SFT-CHEM-MEAS-UNCERTAINTY-001

Generated grammar. Generate the literal product of the registered property, reference, uncertainty, trace, certificate, identity, record and extension choices.

Boundary: Every positive-finite certified chemical-property chain whose reference material, property identity, uncertainty, predecessor links and certificate record are retained to an admitted reference realization.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *reference-material-property__identified-reference-realization__uncertainty-retained__traceability-retained__certificate-bound-record__material-identity-held__complete-chain-record__no-extra-rule*. Closure is *depth_independent*; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
property	reference-material-property	value-without-property	A value without a property identity cannot be traced.
reference	identified-reference-realization	anonymous-reference	An anonymous comparison object cannot anchor a trace chain.
uncertainty	uncertainty-retained	uncertainty-erased	Erasing uncertainty overstates what each comparison preserves.
trace	traceability-retained	broken-predecessor-chain	A missing predecessor prevents reconstruction to the reference.
certificate	certificate-bound-record	uncertified-result-label	A result label alone does not bind property, reference and trace.
identity	material-identity-held	substitutable-sample	Silent sample substitution breaks traceability while preserving a surface value.
record	complete-chain-record	terminal-value-only	A terminal value cannot reproduce the chain.
extension	no-extra-rule	free-trace-link	An unregistered link can hide a discontinuity.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:97e310c97ca4153e8085aa29d2b588832b6425e4220e59493ed9a11b6d0a9c48.

9. Elements, isotopes, ions and periodic structure - 10 admitted claims

Elements, isotopes, ions and periodic recurrence retain exact proton, neutron, electronic and observation boundaries. This entire registered subcategory is included; no proper subset is presented as field completion.

9. Chemical element identity

Claim identity: SFT-CHEM-ELEM-ELEMENT-001

Question and theorem. A chemical element is the complete Fold class of generated atoms sharing one held nuclear proton count; isotope mass refinements preserve that identity, while pure-substance use remains a separate correspondence.

atom-species-carrier__common-proton-count__nuclear-identity__substance-carrier-correspondence

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001

- SFT-PHYS-MEAS-QUANTITY-CARRIER-001
- SFT-PHYS-MEAS-VALUE-RECORD-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-PHYS-MATTER-CONSERVED-LABELS-001
- SFT-PHYS-MATTER-PARTICLE-SPECTRUM-001
- SFT-PHYS-NUCLEAR-LEVELS-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-MEAS-CHEMICAL-SPECIES-001
- SFT-CHEM-MEAS-SUBSTANCE-001

Generated grammar. Generate the literal product of the registered element carrier, identity, location, membership, isotope, substance, record and extension choices.

Boundary: Every positive-finite atom-species class generated from one held nuclear proton-count identity, including all mass-number refinements and its separately recorded pure-substance correspondence.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `atom-species-carrier__common-proton-count__nuclear-identity__all-generated-atoms-with-identity__mass-refinement-permitted__substance-carrier-correspondence__complete-nuclear-membership-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	atom-species-carrier	substance-name-only	A substance name does not define the atom class.
identity	common-proton-count	mass-selected-identity	Mass can vary between isotopes of one element.
location	nuclear-identity	protons-without-nuclear-carrier	An unlocated count does not preserve atomic constitution.
membership	all-generated-atoms-with-identity	sampled-atom-list	A sample cannot close the complete generated class.
isotope	mass-refinement-permitted	one-mass-number-only	Restricting an element to one mass number erases its isotopes.
substance	substance-carrier-correspondence	species-substance-conflation	An atom species and a pure substance are related but not identical carriers.
record	complete-nuclear-membership-trace	element-label-only	A label alone cannot reproduce class membership.
extension	no-extra-rule	free-element-exception	A discretionary exception can split or merge element classes.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt `sha256:76dd7261cbd3b67042302e0d1db175f36c10d018ae297517613179d05638a9d5`.
- `tampered_source`: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt `sha256:13b7765dcc0f65b3252315344aad5c8a70c3fc576d445f435ec090dcd81e8e61`.

Registered target identities:

- chemical-element-iupac-c01022 from IUPAC-GOLD-BOOK-C01022-2026

Meaning. Element identity is a held proton-count class; isotopes, atomic-weight records, periodic order, recurrence, group, period, valence and ions retain exact provenance and observation boundaries. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no IUPAC definition, periodic-table arrangement, measured element value or V2 answer may select a candidate
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- no free, fitted, learned or target-derived parameter
- no application result or opaque predictor
- official target content opens only through post-seal custody
- Every positive-finite atom-species class generated from one held nuclear proton-count identity, including all mass-number refinements and its separately recorded pure-substance correspondence.

Immutable identities. Source manifest

10. Atomic-number ordering and element distinction

Claim identity: SFT-CHEM-ELEM-ATOMIC-NUMBER-001

Question and theorem. Atomic number is the exact generated positive-finite count of protons in an atom's nucleus and therefore the unique order coordinate of its chemical-element class.

exact-proton-count__nuclear-count-carrier

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-QUANTITY-CARRIER-001

- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-PHYS-MATTER-CONSERVED-LABELS-001
- SFT-PHYS-MATTER-PARTICLE-SPECTRUM-001
- SFT-PHYS-NUCLEAR-LEVELS-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-MEAS-CHEMICAL-SPECIES-001
- SFT-CHEM-MEAS-SUBSTANCE-001
- SFT-CHEM-ELEM-ELEMENT-001

Generated grammar. Generate the literal product of the registered atomic-number carrier, location, order, element map, isotope, charge, record and extension choices.

Boundary: Every generated positive-finite nuclear proton collection and its one-to-one order coordinate over admitted chemical-element classes.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *exact-proton-count__nuclear-count-carrier__positive-count-order__one-count-one-element-class__isotope-invariant__charge-state-invariant__count-nucleus-element-trace__no-extra-rule*. Closure is *depth_independent*; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	exact-proton-count	symbol-position-only	A table position cannot define the nuclear quantity.
location	nuclear-count-carrier	whole-atom-particle-count	Counting every atomic particle changes across isotopes and charge states.
order	positive-count-order	unordered-label	An unordered label cannot supply periodic succession.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
element_map	one-count-one-element-class	many-elements-one-count	Two element classes with one proton count violate their identity condition.
isotope	isotope-invariant	mass-dependent-number	Mass-number variation must not alter element order.
charge	charge-state-invariant	electron-count-dependent	Ion formation changes electrons without changing the element.
record	count-nucleus-element-trace	number-without-nucleus	A bare number loses the physical carrier and class mapping.
extension	no-extra-rule	free-order-offset	An offset can relabel the periodic order arbitrarily.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

11. Isotope identity within an element

Claim identity: SFT-CHEM-ELEM-ISOTOPE-001

Question and theorem. Isotopes are the generated Fold family of nuclide carriers sharing one atomic number while retaining different exact mass-number coordinates.

nuclide-carriers__element-identity-retained__mass-number-distinction

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-QUANTITY-CARRIER-001
- SFT-PHYS-MEAS-VALUE-RECORD-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-PHYS-MATTER-CONSERVED-LABELS-001
- SFT-PHYS-MATTER-PARTICLE-SPECTRUM-001
- SFT-PHYS-NUCLEAR-LEVELS-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-MEAS-CHEMICAL-SPECIES-001
- SFT-CHEM-MEAS-SUBSTANCE-001

- SFT-CHEM-ELEM-ELEMENT-001
- SFT-CHEM-ELEM-ATOMIC-NUMBER-001

Generated grammar. Generate the literal product of the registered isotope carrier, element, mass, complementary nuclear count, chemistry, observation, record and extension choices.

Boundary: Every positive-finite family of admitted nuclides sharing one atomic-number identity while retaining each distinct generated mass-number coordinate and complete nuclear record.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `nuclide-carriers__element-identity-retained__mass-number-distinction__complementary-nuclear-count-held__common-element-chemistry-boundary__resolution-bounded-distinction__complete-nuclide-family-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	nuclide-carriers	atom-label-without-nucleus	An atom label alone does not establish nuclide identity.
element	element-identity-retained	mixed-atomic-numbers	Different proton counts are different elements, not isotopes.
mass	mass-number-distinction	mass-number-erased	Erasing mass number merges distinct nuclides.
neutron	complementary-nuclear-count-held	unrecorded-nuclear-difference	The source of mass-number distinction cannot remain anonymous.
chemistry	common-element-chemistry-boundary	different-element-chemistry	Changing element identity does not define an isotope relation.
observation	resolution-bounded-distinction	always-indistinguishable	Isotopic distinctions are resolvable in registered measurements.
record	complete-nuclide-family-trace	isotope-name-only	A name cannot reconstruct proton and mass coordinates.
extension	no-extra-rule	free-isotope-equivalence	An arbitrary equivalence can merge different elements or erase mass distinctions.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt `sha256:8b484361d78650d9a8282675607175a29a3f07500429fe30cdbc8be83fb806e8`.

12. Atomic-weight record and isotopic composition boundary

Claim identity: SFT-CHEM-ELEM-ATOMIC-WEIGHT-001

Question and theorem. Relative atomic mass is the exact source-bounded Fold ratio of a finite atom population's retained average mass to a separately registered unified atomic-mass reference, with isotope support and measurement uncertainty preserved.

exact-ratio-carrier__average-atomic-mass__reference-unit-comparison

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001

- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-QUANTITY-CARRIER-001
- SFT-PHYS-MEAS-VALUE-RECORD-001
- SFT-PHYS-MEAS-UNCERTAINTY-001
- SFT-PHYS-MATTER-CONSERVED-LABELS-001
- SFT-PHYS-MATTER-PARTICLE-SPECTRUM-001
- SFT-PHYS-NUCLEAR-LEVELS-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-MEAS-CHEMICAL-SPECIES-001
- SFT-CHEM-MEAS-SUBSTANCE-001
- SFT-CHEM-MEAS-AMOUNT-001
- SFT-CHEM-MEAS-TRACEABILITY-001
- SFT-CHEM-ELEM-ISOTOPE-001

Generated grammar. Generate the literal product of the registered atomic-weight carrier, population, isotope support, mass pairs, reference, source, uncertainty and extension choices.

Boundary: Every finite source-bounded atom population with retained isotope membership, exact positive rational abundance parts, atomic-mass records and a separate unified-reference-unit comparison.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `exact-ratio-carrier__average-atomic-mass__isotope-support-retained__isotope-mass-pairs__reference-unit-comparison__source-bounded-population__measurement-interval-retained__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	exact-ratio-carrier	decimal-answer-only	A decimal answer hides population, isotope and reference provenance.
population	average-atomic-mass	single-atom-mass	Atomic weight concerns a population average rather than an arbitrary single atom.
isotopes	isotope-support-retained	isotope-mixture-erased	Erasing isotope support loses the source of population variation.
mass	isotope-mass-pairs	unbound-mass-labels	Unbound masses cannot be paired with their isotope parts.
reference	reference-unit-comparison	unit-as-derived-law	A conventional unit scale cannot select the structural ratio.
source	source-bounded-population	universal-fixed-composition	Natural isotope composition can vary by source.
uncertainty	measurement-interval-retained	exact-decimal-pretense	A reported decimal must not erase its measurement interval.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
extension	no-extra-rule	free-weight-adjustment	An adjustable correction can force a measured target.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

Registered target identities:

- relative-atomic-mass-iupac-r05258 from IUPAC-GOLD-BOOK-R05258-2026

Meaning. Element identity is a held proton-count class; isotopes, atomic-weight records, periodic order, recurrence, group, period, valence and ions retain exact provenance and observation boundaries. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no IUPAC definition, periodic-table arrangement, measured element value or V2 answer may select a candidate
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- no free, fitted, learned or target-derived parameter

- no application result or opaque predictor
- official target content opens only through post-seal custody
- Every finite source-bounded atom population with retained isotope membership, exact positive rational abundance parts, atomic-mass records and a separate unified-reference-unit comparison.

Immutable identities. Source manifest

13. Periodic ordering by retained nuclear identity

Claim identity: SFT-CHEM-ELEM-PERIODIC-ORDER-001

Question and theorem. Chemical elements possess one invariant exact total order: the generated positive proton-count order, with the complete element class retained at each coordinate.

complete-element-class-support__atomic-number-coordinate__positive-count-total-order__element-identity-retained

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001
- SFT-PHYS-MEAS-VALUE-RECORD-001
- SFT-PHYS-FIELD-ELECTRIC-DISTINCTION-001
- SFT-PHYS-QUANTUM-DISCRETE-SPECTRA-001
- SFT-PHYS-QUANTUM-INDISTINGUISHABILITY-001
- SFT-PHYS-QUANTUM-EXCLUSION-001
- SFT-PHYS-MATTER-CONSERVED-LABELS-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-ELEM-ELEMENT-001
- SFT-CHEM-ELEM-ATOMIC-NUMBER-001

Generated grammar. Generate the literal product of the registered periodic-order carrier, coordinate, order, identity, succession, observation, record and extension choices.

Boundary: Every positive-finite chemical-element class carrying its admitted atomic-number identity, ordered only by generated proton-count succession and retaining the complete element record at each coordinate.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-element-class-support__atomic-number-coordinate__positive-count-total-order__element-identity-retained__one-proton-successor__post-seal-known-table-correspondence__number-element-source-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	<code>complete-element-class-support</code>	<code>names-without-element-records</code>	Names alone do not preserve the generated element classes.
coordinate	<code>atomic-number-coordinate</code>	<code>layout-selected-coordinate</code>	A drawn location can be changed without changing nuclear identity.
order	<code>positive-count-total-order</code>	<code>unordered-element-set</code>	An unordered set cannot express successor structure.
identity	<code>element-identity-retained</code>	<code>order-erases-isotopes</code>	Ordering must not discard refinements of an element record.
succession	<code>one-proton-successor</code>	<code>free-table-rearrangement</code>	A discretionary rearrangement can select any pattern.
observation	<code>post-seal-known-table-correspondence</code>	<code>known-table-as-proof-premise</code>	The observed table cannot create the order law.
record	<code>number-element-source-trace</code>	<code>atomic-number-only-list</code>	A number list loses symbols, identities and source boundary.
extension	<code>no-extra-rule</code>	<code>free-order-exception</code>	An exception can silently permute successors.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256: fb79be00e6697a390e2401a3f35d4a36e790dd0e25f17ce2d82cdf109459fdc8.
- `tampered_source`: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256: 2468f6a821c5f46777ffec9979273168f4fb4a44c9a3b07a459d3885cd591fe4.

- SFT-CHEM-ELEM-ELEMENT-001
- SFT-CHEM-ELEM-ATOMIC-NUMBER-001
- SFT-CHEM-ELEM-PERIODIC-ORDER-001

Generated grammar. Generate the literal product of the registered recurrence carrier, progression, equivalence, closure, occupation, periodicity, record and extension choices.

Boundary: Every generated positive-finite atomic-number successor family whose boundary-closed outer observation support is quotiented only by complete chemical transition equivalence.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `boundary-closed-outer-support__atomic-number-successor-progression__complete-chemical-trace-equivalence__finite-bound-state-recurrence__exclusion-preserving-occupation__return-of-observation-class__support-transition-recurrence-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	boundary-closed-outer-support	property-name-series	A list of property names contains no physical recurrence carrier.
progression	atomic-number-successor-progression	mass-selected-progression	Isotope mass does not determine element succession.
equivalence	complete-chemical-trace-equivalence	visual-column-equivalence	A drawing cannot establish common chemical behavior.
closure	finite-bound-state-recurrence	unbounded-orbital-continuum	An ungenerated continuum violates the finite exact domain.
occupation	exclusion-preserving-occupation	duplicate-state-without-trace	Unrecorded duplicate occupation violates exclusion.
periodicity	return-of-observation-class	assumed-fixed-period	A fixed imported period can manufacture recurrence.
record	support-transition-recurrence-trace	recurrence-label-only	A repeated label does not reproduce the equivalence test.
extension	no-extra-rule	free-shell-rule	A discretionary shell equation would import the desired organization.

Adverse controls. All mandatory controls passed:

- SFT-CHEM-ELEM-ATOMIC-NUMBER-001
- SFT-CHEM-ELEM-PERIODIC-ORDER-001
- SFT-CHEM-ELEM-PERIODIC-RECURRENCE-001

Generated grammar. Generate the literal product of the registered coordinate carrier, group, period, pairing, ordering, equivalence, record and extension choices.

Boundary: Every finite periodic-order prefix partitioned by exact outer-trace recurrence, with each element assigned one recurrence-class coordinate and one counted closure-to-reopening depth.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *periodic-element-carrier__outer-trace-equivalence-class__closure-reopening-depth__joint-group-period-coordinate*

e__atomic-number-order-retained__complete-trace-quotient__element-order-recurrence-trace__no-extra-rule. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	periodic-element-carrier	printed-cell-coordinate	A page coordinate is representational rather than chemical.
group	outer-trace-equivalence-class	column-number-as-premise	A conventional column number cannot select equivalence.
period	closure-reopening-depth	row-number-as-premise	A conventional row number cannot select recurrence depth.
pairing	joint-group-period-coordinate	group-only-or-period-only	Either coordinate alone loses a required distinction.
ordering	atomic-number-order-retained	layout-dependent-order	Alternate drawings must not alter chemical coordinates.
equivalence	complete-trace-quotient	namesake-family-only	A family name cannot prove matching transition support.
record	element-order-recurrence-trace	coordinate-without-witness	A coordinate without a recurrence witness is not auditable.
extension	no-extra-rule	free-layout-exception	A layout exception can move an element without a chemical distinction.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt sha256:c3f412be7e6caf1ae399956b649c37ddf393710eddf9fdb12016eea631e0b019.

Registered target identities:

- group-period-iupac-2022 from IUPAC-PERIODIC-TABLE-2022

Meaning. Element identity is a held proton-count class; isotopes, atomic-weight records, periodic order, recurrence, group, period, valence and ions retain exact provenance and observation boundaries. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no IUPAC table arrangement, term definition, measured value, electron-shell equation or V2 answer may select a candidate
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- no free, fitted, learned or target-derived parameter
- no application result or opaque predictor
- official target content opens only through post-seal custody
- Every finite periodic-order prefix partitioned by exact outer-trace recurrence, with each element assigned one recurrence-class coordinate and one counted closure-to-reopening depth.

Immutable identities. Source manifest

16. Valence availability and chemical combination boundary

Claim identity: SFT-CHEM-ELEM-VALENCE-001

Question and theorem. Valence is the exact greatest realized univalent joining or substitution count in the complete generated combination support of a retained atom or fragment and chemical context.

atom-or-fragment-carrier__complete-generated-combination-support__univalent-partner-count__maximum-realized-count

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-LOGIC-PROOF-001

- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MEAS-OBSERVATION-CARRIER-001

- SFT-CHEM-ELEM-ELEMENT-001
- SFT-CHEM-ELEM-ATOMIC-NUMBER-001
- SFT-CHEM-ELEM-PERIODIC-RECURRENCE-001
- SFT-CHEM-ELEM-GROUP-PERIOD-001

Generated grammar. Generate the literal product of the registered valence carrier, support, unit, selection, substitution, context, record and extension choices.

Boundary: Every finite atom or chemical fragment with complete generated combination and substitution traces, where the largest realized univalent joining count is retained with its chemical context.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `atom-or-fragment-carrier__complete-generated-combination-support__univalent-partner-count__maximum-realized-count__combination-or-substitution__chemical-context-retained__combination-maximum-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	atom-or-fragment-carrier	element-name-only	An element name contains no combination witness.
support	complete-generated-combination-support	assumed-valence-number	An assumed number imports the answer.
unit	univalent-partner-count	mixed-partner-count	Partners of unrecorded multiplicity cannot define one comparison.
selection	maximum-realized-count	typical-count	A typical value can omit a lawful larger combination.
substitution	combination-or-substitution	combination-only	Valence also constrains lawful substitution for the carrier.
context	chemical-context-retained	universal-context-free-number	Chemical environment may alter available combinations.
record	combination-maximum-trace	number-without-traces	A bare number cannot reproduce its maximum witness.
extension	no-extra-rule	free-valence-correction	An adjustment can force a conventional value.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt sha256 : 5806447da7a755ea31ac1d6fd82ead9fe731b639e24caddb330920603419c201.
- **tampered_source:** passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256 : c1fe82f9e1c25112465debbf7a0addc85fad42abe7789fe1bd67cb615eaf18d2.

- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-ELEM-ELEMENT-001
- SFT-CHEM-ELEM-ATOMIC-NUMBER-001
- SFT-CHEM-ELEM-VALENCE-001

Generated grammar. Generate the literal product of the registered ion carrier, charge, formation, conservation, element, orientation, record and extension choices.

Boundary: Every finite atomic or molecular chemical carrier whose complete conserved electric-label accounting leaves one non-neutral held orientation while retaining its elemental and molecular identity records.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *atomic-or-molecular-particle__net-held-electric-charge__label-transfer-with-identity-retained__closed-charge-transfer__atomic-number-retained__cation-anion-held-fibres__carrier-charge-transfer-trac*

e__no-extra-rule. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	atomic-or-molecular-particle	charge-label-without-particle	A charge label detached from matter is not a chemical ion.
charge	net-held-electric-charge	signed-proof-number	A signed proof magnitude violates the positive exact domain.
formation	label-transfer-with-identity-retained	identity-destroying-change	Destroying the carrier does not create a charge state of it.
conservation	closed-charge-transfer	unpaired-charge-creation	Unpaired creation violates closed label flow.
element	atomic-number-retained	proton-count-change	Changing proton count changes element identity.
orientation	cation-anion-held-fibres	positive-negative-proof-scalars	Signed scalars are not SFT proof objects.
record	carrier-charge-transfer-trace	ion-name-only	A name cannot reconstruct carrier, charge and transfer.
extension	no-extra-rule	free-charge-exception	An exception can create or erase charge without transfer.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt sha256:2ae6650a4e3754c24fb9a4f8f09536c51e7b81ac2b96455c63b56e597cb94fe0.

- SFT-CHEM-ELEM-PERIODIC-ORDER-001
- SFT-CHEM-ELEM-GROUP-PERIOD-001
- SFT-CHEM-ELEM-ION-001

Generated grammar. Generate the literal product of the registered known-boundary carrier, extent, identity, time, completeness, extension, record and rule choices.

Boundary: Every official finite periodic-table release treated as a source-dated observation census, retaining all listed atomic-number/element records while leaving any unobserved successor scientifically open.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-source-bounded-census__greatest-listed-coordinate__element-record-retained__release-date-retained__all-listed-rows-retained__unobserved-successor-open__source-hash-census-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-source-bounded-census	largest-number-only	A largest number alone omits the observed element census.
extent	greatest-listed-coordinate	timeless-terminal-claim	A current release cannot prove that no successor can exist.
identity	element-record-retained	count-without-element	A number without its element record is not an observation boundary.
time	release-date-retained	undated-table	An undated table cannot define a reproducible empirical boundary.
completeness	all-listed-rows-retained	selected-terminal-row	Selecting only the last row cannot establish the registered census.
extension	unobserved-successor-open	observed-means-impossible-beyond	Absence from one release is not impossibility.
record	source-hash-census-trace	boundary-without-source	An unsourced endpoint cannot be reproduced.
rule	no-extra-rule	free-terminal-rule	A terminal rule chosen from the table would overfit observation.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

Custody certificate: sha256: 0de1af0a124c000f878f0e24d103f1dfd709e6b5674632a5aeab00d9cf8a1cf3.

Registered source descriptions:

- International Union of Pure and Applied Chemistry:
https://iupac.org/wp-content/uploads/2022/07/IUPAC_Periodic_Table-04May22_CRA.pdf
(sha256:ef6ca2f6d46554f96e30ad3a60693d6630fe45ad81ce83cb14e508c6cbb7d3b3)

Registered target identities:

- periodic-boundary-iupac-2022 from IUPAC-PERIODIC-TABLE-2022

Meaning. Element identity is a held proton-count class; isotopes, atomic-weight records, periodic order, recurrence, group, period, valence and ions retain exact provenance and observation boundaries. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no IUPAC table arrangement, term definition, measured value, electron-shell equation or V2 answer may select a candidate
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- no free, fitted, learned or target-derived parameter
- no application result or opaque predictor
- official target content opens only through post-seal custody
- Every official finite periodic-table release treated as a source-dated observation census, retaining all listed atomic-number/element records while leaving any unobserved successor scientifically open.

Immutable identities. Source manifest

10. Composition, mixtures, solutions and stoichiometry - 7 admitted claims

Every constituent remains in a positive exact ledger across mixtures, solutions and complete reaction maps. This entire registered subcategory is included; no proper subset is presented as field completion.

19. Exact chemical composition

Claim identity: SFT-CHEM-STOICH-COMPOSITION-001

Question and theorem. Chemical composition is the complete finite Fold carrier of distinct constituent identities paired with exact positive rational parts that exhaust the One.

complete-chemical-carrier__distinct-constituent-identities__exact-positive-rational-parts__parts-exhaust-the-One

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001

- SFT-CHEM-MEAS-AMOUNT-001
- SFT-CHEM-MEAS-FORMULA-001
- SFT-CHEM-ELEM-ELEMENT-001
- SFT-CHEM-ELEM-PERIODIC-ORDER-001

Generated grammar. Generate the literal product of the registered composition carrier, components, quantity, closure, absence, identity, record and extension choices.

Boundary: Every finite chemical carrier whose distinct constituent identities have exact positive rational parts that exhaust the One and preserve the measurement/source boundary.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-chemical-carrier__distinct-constituent-identities__exact-positive-rational-parts__parts-exhaust-the-0`

ne__absent-component-omitted__constituent-identity-retained__identity-part-source-trace__no-extra-rule. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-chemical-carrier	bulk-label-only	A bulk label erases constituent support.
components	distinct-constituent-identities	anonymous-parts	Anonymous parts cannot preserve chemical identity.
quantity	exact-positive-rational-parts	floating-percentages	Floating percentages cannot certify exact closure.
closure	parts-exhaust-the-One	partial-selected-composition	Selected components need not exhaust the carrier.
absence	absent-component-omitted	zero-valued-components	Numerical zero is not an SFT composition object.
identity	constituent-identity-retained	interchangeable-constituents	Equal amounts do not make substances identical.
record	identity-part-source-trace	composition-answer-only	An answer loses part and source provenance.
extension	no-extra-rule	free-normalization-correction	A correction could force closure after the fact.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt sha256 : a72500ce5db6e8ec585702f2e1a8dbfed043e7e52c2ee8304e5647b7e3abf5e7.

20. Conservation of elemental identity through reaction

Claim identity: SFT-CHEM-STOICH-CONSERVATION-001

Question and theorem. A chemical reaction is closed only when complete held reactant/product words have exactly equal positive multiplicity totals for every retained elemental identity, including named boundary carriers.

complete-reaction-word__held-reactant-product-sides__elemental-identities-retained__all-element-totals-paired

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-LOGIC-PROOF-001

- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-MATTER-CONSERVED-LABELS-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-MEAS-CHEMICAL-SPECIES-001
- SFT-CHEM-MEAS-SUBSTANCE-001
- SFT-CHEM-MEAS-AMOUNT-001
- SFT-CHEM-MEAS-FORMULA-001
- SFT-CHEM-ELEM-ELEMENT-001
- SFT-CHEM-ELEM-PERIODIC-ORDER-001
- SFT-CHEM-STOICH-COMPOSITION-001

Generated grammar. Generate the literal product of the registered conservation carrier, orientation, identity, count, closure, boundary, record and extension choices.

Boundary: Every finite chemical transition word whose reactant and product sides retain complete species formulae, positive multiplicities and equal per-element totals.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-reaction-word__held-reactant-product-sides__elemental-identities-retained__exact-positive-multiplicity__all-element-totals-paired__named-boundary-carriers__species-formula-total-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-reaction-word	product-list-without-input	Products alone cannot demonstrate conservation.
orientation	held-reactant-product-sides	signed-stoichiometric-scalars	Signed proof quantities violate the positive domain.
identity	elemental-identities-retained	mass-only-balance	Equal bulk mass can hide changed element labels.
count	exact-positive-multiplicity	approximate-decimal-balance	Approximation cannot prove equality of discrete carriers.
closure	all-element-totals-paired	selected-elements-only	Omitting an element can manufacture balance.
boundary	named-boundary-carriers	unrecorded-open-system	Unrecorded boundary transfer can mimic loss or creation.
record	species-formula-total-trace	balanced-label-only	A label cannot reconstruct the equality.
extension	no-extra-rule	free-balancing-exception	An exception could excuse an unpaired carrier.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
`sha256:5108a653085bf72b6824763bc3d1b16ed015738b65ff8dcd78f9367699bc2f27`.

- **tampered_source**: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256:079af8a29365c118d92b3732ad4284de9697833b1c3698b2e3da9b48679a85fc.
- **tampered_artifact**: passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt sha256:455afb7670db3dca84beea9f74cbfbc874dd8b6a3bbaa348262b0aafd2c7282d2.

- SFT-CHEM-ELEM-ELEMENT-001
- SFT-CHEM-ELEM-PERIODIC-ORDER-001
- SFT-CHEM-STOICH-CONSERVATION-001

Generated grammar. Generate the literal product of the registered coefficient carrier, orientation, balance, scale, absence, uniqueness, record and extension choices.

Boundary: Every balanceable finite chemical reaction support with participating species only, represented by the least common-factor-free vector of positive generated multiplicities.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *formula-bound-species-support__held-side-positive-count__element-balance-preserved__primitive-positive-vector__nonparticipants-omitted__unique-up-to-common-multiple__formula-matrix-reduction-trace__no-extra-rule*. Closure is *depth_independent*; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	formula-bound-species-support	coefficient-list-without-species	Counts detached from formulae have no chemical meaning.
orientation	held-side-positive-count	negative-reactant-count	Negative proof counts are inadmissible.
balance	element-balance-preserved	unbalanced-count-vector	An unbalanced vector violates element conservation.
scale	primitive-positive-vector	arbitrary-common-multiple	Common multiples are equivalent but not minimal.
absence	nonparticipants-omitted	zero-coefficient-species	A zero coefficient imports numerical zero.
uniqueness	unique-up-to-common-multiple	one-picked-balancing-vector	Picking one vector does not eliminate rescalings.
record	formula-matrix-reduction-trace	coefficient-answer-only	A count list cannot prove its balance.
extension	no-extra-rule	free-coefficient-adjustment	An adjustment can force a desired equation.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt sha256 : c078d573e8a1e9e8a75c4bf44728a255e36bf2ce05c9bdb553302bc964024fb0.

Registered target identities:

- reaction-equation-iupac-c01034 from IUPAC-GOLD-BOOK-C01034-2026

Meaning. Composition and stoichiometry preserve every elemental carrier across complete reactant/product maps, primitive positive coefficients, limiting support, yield, mixture and solution organization. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no IUPAC wording, balanced equation, measured amount or V2 answer may select a candidate
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- no free, fitted, learned or target-derived parameter
- no absent species represented by a zero coefficient; absence is an empty generated form
- no application result or opaque predictor
- official target content opens only through post-seal custody
- Every balanceable finite chemical reaction support with participating species only, represented by the least common-factor-free vector of positive generated multiplicities.

Immutable identities. Source manifest

22. Limiting-component and complete-consumption boundary

Claim identity: SFT-CHEM-STOICH-LIMITING-001

Question and theorem. The limiting support is the complete tied least set of exact available-amount to primitive-required-count ratios; it bounds reaction progress before any unavailable carrier would be required.

available-reactant-support__primitive-coefficient-requirement__exact-available-required-ratios__complete-least-ratio-support

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001

- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-MATTER-CONSERVED-LABELS-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-MEAS-CHEMICAL-SPECIES-001
- SFT-CHEM-MEAS-SUBSTANCE-001
- SFT-CHEM-MEAS-AMOUNT-001
- SFT-CHEM-MEAS-FORMULA-001
- SFT-CHEM-ELEM-ELEMENT-001
- SFT-CHEM-ELEM-PERIODIC-ORDER-001
- SFT-CHEM-STOICH-COEFFICIENT-001

Generated grammar. Generate the literal product of the registered limiting carrier, requirement, comparison, selection, consumption, excess, record and extension choices.

Boundary: Every finite reaction input with exact positive available amounts and primitive required coefficients, where complete reaction progress is bounded by every available-to-required ratio.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `available-reactant-support__primitive-coefficient-requirement__exact-available-required-ratios__complete-least-ratio-support__complete-consumption-boundary__retained-excess-support__amount-coefficient-ratio-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	available-reactant-support	named-reagent-only	A name without amount and coefficient cannot limit progress.
requirement	primitive-coefficient-requirement	unbalanced-requirement	Consumption requirements must come from the balanced reaction.
comparison	exact-available-required-ratios	floating-ratio-ranking	Floating comparison cannot certify ties or minima.
selection	complete-least-ratio-support	first-considered-reactant	Ordering of inspection cannot select the limiter.
consumption	complete-consumption-boundary	negative-remainder	Overrunning the least support would require unavailable matter.
excess	retained-excess-support	excess-erased	Nonlimiting remainder is part of the result.
record	amount-coefficient-ratio-trace	limiter-name-only	A name cannot reproduce the comparison.
extension	no-extra-rule	free-limiter-rule	A preference could choose a nonminimal reagent.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt sha256: 6ebd09dcebbbc38118e45114f8cc922497e0587e6cdfe8cd4eabb024443338070.
- `tampered_source`: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256: 74667f499635c03544e37dbda2e53204e74a332e76fe799df64c6be0f44a9754.

23. Reaction yield as retained product share

Claim identity: SFT-CHEM-STOICH-YIELD-001

Question and theorem. Chemical yield is the exact positive Fold part of a retained element-or-compound product amount relative to its registered expected support after a specified reaction or separation.

element-or-compound-product__specified-reaction-or-separation__complete-observed-product-amount__exact-positive-amount-fraction

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001

- SFT-CHEM-MEAS-SUBSTANCE-001
- SFT-CHEM-MEAS-AMOUNT-001
- SFT-CHEM-MEAS-FORMULA-001
- SFT-CHEM-ELEM-ELEMENT-001
- SFT-CHEM-ELEM-PERIODIC-ORDER-001
- SFT-CHEM-STOICH-LIMITING-001

Generated grammar. Generate the literal product of the registered yield carrier, process, numerator, reference, quantity, absence, record and extension choices.

Boundary: Every specified reaction or separation with a retained expected product support and a positive observed product amount represented as an exact part of that reference support.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *element-or-compound-product__specified-reaction-or-separation__complete-observed-product-amount__registered-expected-support__exact-positive-amount-fraction__empty-product-outcome-form__product-process-reference-trace__no-extra-rule*. Closure is *depth_independent*; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	element-or-compound-product	percentage-without-product	A percentage detached from a product is not chemical yield.
process	specified-reaction-or-separation	unspecified-process	Yield depends on the declared reaction or separation.
numerator	complete-observed-product-amount	selected-favorable-product	Selecting a favorable amount hides other outcomes.
reference	registered-expected-support	unbound-denominator	A fraction without its reference is uninterpretable.
quantity	exact-positive-amount-fraction	floating-percent	Floating output is not exact proof.
absence	empty-product-outcome-form	numerical-zero-yield	Zero is not an SFT proof value.
record	product-process-reference-trace	yield-answer-only	An answer loses product, process and reference provenance.
extension	no-extra-rule	free-yield-correction	A correction can inflate the observed result.

- SFT-CHEM-ELEM-PERIODIC-ORDER-001
- SFT-CHEM-STOICH-COMPOSITION-001
- SFT-CHEM-STOICH-YIELD-001

Generated grammar. Generate the literal product of the registered mixture carrier, multiplicity, identity, composition, bonding, phase, record and extension choices.

Boundary: Every finite portion of matter containing multiple retained chemical-substance identities and their exact positive composition parts without requiring a new bonded substance identity.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `portion-of-matter-carrier__multiple-constituent-support__chemical-substance-identities__exact-positive-composition-parts__constituent-identities-retained__phase-support-recorded-not-forced__component-part-phase-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	portion-of-matter-carrier	substance-name-only	One substance name does not define a mixture.
multiplicity	multiple-constituent-support	single-constituent	A single constituent is not a mixture.
identity	chemical-substance-identities	anonymous-components	Anonymous components erase chemical distinction.
composition	exact-positive-composition-parts	unmeasured-presence-list	Presence alone cannot reconstruct composition.
bonding	constituent-identities-retained	new-substance-conflation	Mixing does not by itself force a new chemical identity.
phase	phase-support-recorded-not-forced	single-phase-required	Mixtures may contain one or several phases.
record	component-part-phase-trace	mixture-label-only	A label cannot reconstruct components.
extension	no-extra-rule	free-mixture-equivalence	An arbitrary equivalence can merge distinct mixtures.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt `sha256: acb80f57db5c57ab1df7b007f1543f85ba3748e02f7d0e3d95d125a1cfb31630`.

25. Solution composition and solute-solvent distinction

Claim identity: SFT-CHEM-STOICH-SOLUTION-001

Question and theorem. A solution is a liquid or solid single-phase mixture containing multiple retained substances under an explicit contextual solvent/solute role partition.

liquid-or-solid-phase__single-phase-support__multiple-substance-support__solvent-solute-role-partition

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-ENCODING-DECODING-001
- SFT-INFO-CONSERVATION-LOSS-001

- SFT-CHEM-ELEM-PERIODIC-ORDER-001
- SFT-CHEM-STOICH-MIXTURE-001

Generated grammar. Generate the literal product of the registered solution carrier, phase, composition, roles, identity, context, record and extension choices.

Boundary: Every finite liquid or solid single-phase mixture with multiple retained substances and an explicit contextual partition between solvent carrier roles and solute carrier roles.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *liquid-or-solid-phase__single-phase-support__multiple-substance-support__solvent-solute-role-partition__substance-identities-retained__declared-context-role__phase-component-role-trace__no-extra-rule*. Closure is *depth_independent*; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	liquid-or-solid-phase	gas-or-unclassified-matter	The registered solution boundary is a liquid or solid phase.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
phase	single-phase-support	multiple-unresolved-phases	Unresolved phase multiplicity does not define one solution carrier.
composition	multiple-substance-support	single-substance-phase	A pure phase lacks solute/solvent distinction.
roles	solvent-solute-role-partition	unpartitioned-components	A solution record distinguishes solvent from solutes.
identity	substance-identities-retained	roles-replace-identity	A role label must not erase substance identity.
context	declared-context-role	intrinsic-permanent-role	Solvent/solute assignment can depend on the description context.
record	phase-component-role-trace	solution-name-only	A name cannot reproduce phase and roles.
extension	no-extra-rule	free-solution-exception	An exception can relabel a multiphase mixture as one solution.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:4fe30a8a55d56b5ab42bf2b742148820ad68162cf9d5e70ee5a38004e0f457b9.

- International Union of Pure and Applied Chemistry: <https://goldbook.iupac.org/terms/view/S05746/json> (sha256:39f8916fdced6993ceb67e374641b95375570866a24123508ce26f9ec0049f28)

Registered target identities:

- solution-iupac-s05746 from IUPAC-GOLD-BOOK-S05746-2026

Meaning. Composition and stoichiometry preserve every elemental carrier across complete reactant/product maps, primitive positive coefficients, limiting support, yield, mixture and solution organization. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no IUPAC wording, balanced equation, measured amount or V2 answer may select a candidate
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- no free, fitted, learned or target-derived parameter
- no absent species represented by a zero coefficient; absence is an empty generated form
- no application result or opaque predictor
- official target content opens only through post-seal custody
- Every finite liquid or solid single-phase mixture with multiple retained substances and an explicit contextual partition between solvent carrier roles and solute carrier roles.

Immutable identities. Source manifest

11. Bonding and molecular organization - 12 admitted claims

Bonds and molecules are generated joint-support and recurrence structures with held adjacency and orientation. This entire registered subcategory is included; no proper subset is presented as field completion.

26. Chemical bond as retained interaction closure

Claim identity: SFT-CHEM-BOND-CHEMICAL-BOND-001

Question and theorem. A chemical bond exists when complete source-bound interaction support between distinct atomic carrier occurrences or groups closes into stable joint recurrence distinguishable as an independent chemical carrier.

atoms-or-atomic-groups__source-bound-interaction-support__stable-joint-recurrence__independent-chemical-entity

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001

- SFT-CHEM-STOICH-CONSERVATION-001

Generated grammar. Generate the literal product of the registered bond carrier, interaction, closure, independence, energy, reversal, record and extension choices.

Boundary: Every finite pair or group of admitted atomic carriers and complete interaction support whose joint recurrence is stable as an independently distinguishable chemical carrier at the registered boundary.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `atoms-or-atomic-groups__source-bound-interaction-support__stable-joint-recurrence__independent-chemical-entity__measured-stability-record-separated__opening-closes-to-separated-support__carrier-interaction-recurrence-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	atoms-or-atomic-groups	bond-name-without-atoms	A bond name detached from carriers has no chemical support.
interaction	source-bound-interaction-support	coincidental-proximity	Proximity alone need not produce a stable entity.
closure	stable-joint-recurrence	transient-contact-only	A contact without recurrence is not an independent bonded carrier.
independence	independent-chemical-entity	parts-only-observation	If only separated parts persist, no joined entity is formed.
energy	measured-stability-record-separated	imported-potential-function	A consensus potential cannot select closure.
reversal	opening-closes-to-separated-support	irreversible-by-definition	Bond opening may be lawful and must retain carriers.
record	carrier-interaction-recurrence-trace	bond-label-only	A label cannot reproduce interaction and stability.
extension	no-extra-rule	free-bond-exception	An exception can call any contact a bond.

Adverse controls. All mandatory controls passed:

- SFT-CHEM-STOICH-COMPOSITION-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-BOND-CHEMICAL-BOND-001

Generated grammar. Generate the literal product of the registered covalent carrier, electron, sharing, density, attraction, occupation, record and extension choices.

Boundary: Every finite bonded atomic support with one or more electron-labelled recurrence channels jointly accessible to both nuclear carriers and exclusion-preserving occupation.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `identified-nuclear-pair__joint-electron-support__one-support-shared-access__internuclear-accessible-region__stable-contractive-response__exclusion-preserving-channels__nuclei-channel-sharing-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	identified-nuclear-pair	bond-without-nuclei	Covalent support relates identified atomic centres.
electron	joint-electron-support	electron-assigned-to-one-centre	One-centre support alone is not shared bonding support.
sharing	one-support-shared-access	copied-electron-label	Copying one conserved carrier violates exclusion and conservation.
density	internuclear-accessible-region	empty-internuclear-path	No connecting support cannot join the nuclei.
attraction	stable-contractive-response	unbound-force-label	A force name without recurrence does not establish a bond.
occupation	exclusion-preserving-channels	duplicate-identical-cell	Duplicated identical occupation violates exclusion.
record	nuclei-channel-sharing-trace	covalent-label-only	A label cannot reconstruct sharing.
extension	no-extra-rule	free-orbital-rule	An imported orbital choice can select a desired bond.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt `sha256:f59fe4de319dd05bd3b6b6d48f1de3d15a39d2deee4bc65cbf5214affe909a3c`.

28. Ionic transferred-label bond

Claim identity: SFT-CHEM-BOND-IONIC-001

Question and theorem. An ionic bond is stable joint recurrence of opposed cation/anion held charge fibres produced by closed charge transfer, with electrostatic attraction and both chemical identities retained.

cation-anion-carriers__closed-charge-transfer__opposed-held-charge-fibres__electrostatic-attraction-support

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001

- SFT-CHEM-BOND-COVALENT-001

Generated grammar. Generate the literal product of the registered ionic carrier, formation, orientation, interaction, identity, character, record and extension choices.

Boundary: Every finite charge-transfer product containing opposed cation/anion held fibres whose closed electric interaction yields stable joint recurrence while both chemical identities remain retained.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `cation-anion-carriers__closed-charge-transfer__opposed-held-charge-fibres__electrostatic-attraction-support__chemical-identities-retained__exact-support-composition__ion-transfer-interaction-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	cation-anion-carriers	neutral-atom-pair-only	The ionic class requires retained ion carriers.
formation	closed-charge-transfer	unpaired-charge-creation	Charge cannot appear without conserved transfer.
orientation	opposed-held-charge-fibres	signed-charge-magnitudes	Negative proof magnitude is inadmissible.
interaction	electrostatic-attraction-support	generic-proximity	Proximity does not explain ionic stability.
identity	chemical-identities-retained	element-identity-erased	Ion formation preserves nuclear element identity.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
character	exact-support-comp osition	pure-binary-dogma	Observed bonds may retain both ionic and shared support.
record	ion-transfer-inter action-trace	ionic-label-only	A label cannot reconstruct transfer and attraction.
extension	no-extra-rule	free-electronegativity-cu toff	A fitted cutoff would import the classification.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

- SFT-CHEM-BOND-CHEMICAL-BOND-001
- SFT-CHEM-BOND-COVALENT-001
- SFT-CHEM-BOND-IONIC-001

Generated grammar. Generate the literal product of the registered metallic carrier, electron, extent, joining, recurrence, identity, record and extension choices.

Boundary: Every finite connected atomic network whose electron-labelled accessible support extends across multiple atomic cells and whose collective recurrence stabilizes the whole carrier.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `connected-atomic-network__delocalized-electron-support__finite-whole-network-extent__collective-shared-support__stable-collective-recurrence__atomic-and-network-identities__network-electron-recurrence-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	connected-atomic-network	isolated-atom-pair	Metallic support is collective rather than one fixed pair.
electron	delocalized-electron-support	localized-pair-only	A fixed pair cannot mediate the complete network.
extent	finite-whole-network-extent	unrecorded-infinite-lattice	A completed infinite lattice is not generated.
joining	collective-shared-support	independent-local-bonds-only	Independent local pairs omit collective redistribution.
recurrence	stable-collective-recurrence	transient-conduction-only	Transport alone does not establish stable bonding.
identity	atomic-and-network-identities	anonymous-metal-label	A metal label cannot create the law.
record	network-electron-recurrence-trace	metallic-label-only	A label cannot reproduce topology and support.
extension	no-extra-rule	free-electron-sea-premise	An imported metaphor cannot select the structure.

Adverse controls. All mandatory controls passed:

- SFT-CHEM-BOND-COVALENT-001
- SFT-CHEM-BOND-IONIC-001
- SFT-CHEM-BOND-METALLIC-001

Generated grammar. Generate the literal product of the registered bond-order carrier, support, reference, quantity, delocalization, method, record and extension choices.

Boundary: Every finite identified bond with complete joining-channel support, measured relative to one localized electron-pair joining unit using exact positive counts or rational support parts.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *identified-bond-carrier__complete-joining-channel-support__single-localized-pair-reference__exact-positive-rational-degree__rational-support-sharing-retained__partition-bound-index__bond-channel-re*

ference-trace__no-extra-rule. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	identified-bond-carrier	index-without-bond	A number detached from a bond has no meaning.
support	complete-joining-channel-support	selected-channel-count	Omitting channels can force the degree.
reference	single-localized-pair-reference	arbitrary-scale	A free scale can select any order.
quantity	exact-positive-rational-degree	floating-index	Floating arithmetic cannot certify the exact support ratio.
delocalization	rational-support-sharing-retained	integer-only-order	Delocalized support can distribute a joining unit across links.
method	partition-bound-index	one-partition-as-absolute	Different observational partitions can report different indices.
record	bond-channel-reference-trace	order-answer-only	An index alone cannot reproduce support.
extension	no-extra-rule	free-order-correction	A correction can force a conventional integer.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt sha256:e2db93d7acdd9cf1733eff52d8fd837ae587de58815c0f9e206eff130e6bfc39.

- SFT-CHEM-BOND-ORDER-001

Generated grammar. Generate the literal product of the registered length/strength carrier, length, strength, conditions, correspondence, measurement, record and extension choices.

Boundary: Every identified bond with one source/method-bounded inter-centre distance record and one separately source/condition-bounded positive dissociation-transfer record, joined only by common bond identity.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `specific-identified-bond__method-bounded-centre-distance__positive-dissociation-transfer__measurement-conditions-retained__common-bond-identity-pairing__separate-source-bound-records__bond-length-strength-source-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	specific-identified-bond	generic-bond-type-only	A type average can erase the specific molecular carrier.
length	method-bounded-centre-distance	context-free-distance	Measured bond length depends on method and state.
strength	positive-dissociation-transfer	qualitative-strong-weak-label	A qualitative label cannot reproduce dissociation.
conditions	measurement-conditions-retained	conditions-erased	Phase, state and cleavage path affect measured records.
correspondence	common-bond-identity-pairing	universal-inverse-equation	A categorical relation does not force one universal formula.
measurement	separate-source-bound-records	decimal-as-proof-scalar	Measured decimals cannot enter derivation.
record	bond-length-strength-source-trace	paired-values-without-provenance	A pair without methods cannot be compared.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
extension	no-extra-rule	free-length-strength-fit	A fitted curve can force measured examples.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256: 7e1b3cf5cdf81e62b593729ae380c6b6151fbb768b02e8bf683fd10d67c2c8f.
- **tampered_source:** passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256: 6d7e7989df91ca411877aaff4507ef5c4000a87e17468950721c429d0230f768.
- **tampered_artifact:** passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt
sha256: fd7a974bad4e601cb6c1b60bb8f0389b4d00b597b8529173ea28367aedbfff8f9.
- **boundary:** passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt
sha256: 1026b70bc7c6d6d1fcaac20815b08bbbd0f66f656c3ee48a5cb01d4a3d22f86b.

Independent reconstruction. Implementation hash

sha256: 1ab7ee39098a0f17e5dc2489b48970f1f57d1444593a8701101beed99fc8fd04; independent certificate sha256: 93ff0d4b30b1dc3cadf664a6d1271083634771cc896a074b5af4ad60dc8dc0b2; external-validation hash sha256: c3a6c3d6319fdb6fb2facbc7c90850e7b228010c380c241d7eccdc99db75eae4. The independent program regenerates the declared product and sole survivor without importing the derivation implementation.

Post-seal external check. Target content was opened only after the matching prediction seal: **True**. All registered rows were preserved: **True**. The capability-isolation and custody certificates passed. External source identities:

- IUPAC-GOLD-BOOK-B00702-2026

Comparison records:

- bond-length-strength-iupac-b00702: predicted bond-length__bond-dissociation-energy__bond-order-empirical-relationship; source-derived bond-length__bond-dissociation-energy__bond-order-empirical-relationship; exact match **True**
- deliberately tampered unfavorable control rejected

Falsification boundary: The claim fails if IUPAC lacks the registered empirical relationship among bond length, dissociation energy and order, or if a changed row is accepted; it does not fail merely because no universal monotone formula exists.

Measurement receipt: sha256: c851de6f97527329aa6b79dbe76bde3a19b51e5d7d1e7c9674758c1959a09f95.

- SFT-CHEM-BOND-LENGTH-STRENGTH-001

Generated grammar. Generate the literal product of the registered molecule cardinality, bonding, connectivity, charge, composition, identity, record and extension choices.

Boundary: Every finite generated multi-atomic carrier with complete connected bond support, retained constituent identity and no open net-charge fibre at the registered observation boundary.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `multiple-atomic-occurrences__complete-bond-support__one-connected-component__closed-charge-boundary__constituent-identities-retained__complete-structure-identity__complete-carrier-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
cardinality	multiple-atomic-occurrences	single-atomic-occurrence	One occurrence has no internal molecular bond graph.
bonding	complete-bond-support	unbonded-collection	A collection without joining support is not one molecule.
connectivity	one-connected-component	disconnected-components	Disconnected components are separate carriers.
charge	closed-charge-boundary	open-net-charge-fibre	An open net fibre describes a molecular ion rather than the neutral molecular class.
composition	constituent-identities-retained	anonymous-atom-count	Counts without element identities cannot reproduce the carrier.
identity	complete-structure-identity	formula-alone	Equal composition need not imply one molecular structure.
record	complete-carrier-trace	molecule-label-only	A label cannot reconstruct atoms and bonds.
extension	no-extra-rule	free-molecule-exception	An exception can admit arbitrary aggregates.

Adverse controls. All mandatory controls passed:

- SFT-CHEM-MOL-MOLECULE-001

Generated grammar. Generate the literal product of the registered geometry carrier, adjacency, orientation, completeness, equivalence, measurement, record and extension choices.

Boundary: Every finite admitted molecular carrier with a complete pairwise relative-orientation record, interpreted up to one global rigid relabelling and retained with its source and observation conditions.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *identified-molecular-carrier__complete-atom-adjacency__held-relative-orientation__complete-pair-support__rigid-relabel-equivalence__source-bounded-geometry-record__adjacency-orientation-source-trace__no-extra-rule*. Closure is *depth_independent*; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	identified-molecular-carrier	geometry-without-molecule	A shape detached from an identified carrier is not molecular geometry.
adjacency	complete-atom-adjacency	atom-list-only	An atom list omits which occurrences are joined.
orientation	held-relative-orientation	distance-only-record	Distances alone can omit handed or ordered orientation.
completeness	complete-pair-support	selected-coordinate-subset	A favorable subset cannot establish the whole geometry.
equivalence	rigid-relabel-equivalence	absolute-host-frame	A host coordinate frame cannot define chemical identity.
measurement	source-bounded-geometry-record	coordinate-as-proof-premise	A measured coordinate cannot select the law.
record	adjacency-orientation-source-trace	shape-name-only	A shape name cannot reproduce the relations.
extension	no-extra-rule	free-angle-fit	A fitted angle can force a target geometry.

Adverse controls. All mandatory controls passed:

Generated grammar. Generate the literal product of the registered isomer pair, composition, structure, equivalence, distinction, identity, record and extension choices.

Boundary: Every finite pair of admitted chemical carriers with exactly equal composition signatures but unequal complete connectivity or held-orientation signatures after every identity-preserving relabelling.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `two-identified-carriers__equal-exact-composition__complete-structure-signatures__all-identity-preserving-relabelings__connectivity-or-orientation-difference__separate-chemical-identities__composition-and-structure-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
pair	two-identified-carriers	single-carrier-description	Isomerism compares at least two chemical carriers.
composition	equal-exact-composition	different-compositions	Different composition is not isomerism.
structure	complete-structure-signatures	formula-equated-identity	A formula does not exhaust bonded organization.
equivalence	all-identity-preserving-relabelings	name-string-inequality	Different names can denote the same structure.
distinction	connectivity-or-orientation-difference	equivalent-signatures	Equivalent complete signatures denote the same isomeric form.
identity	separate-chemical-identities	distinction-erased	Erasing the difference destroys the chemical question.
record	composition-and-structure-trace	isomer-label-only	A label cannot reproduce equality and difference.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
extension	no-extra-rule	free-isomer-class	A free class label can manufacture a distinction.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:cff91e3ddb362ea4243a3a751487636d8cbe5db830e215e91e1e8691584f0dcf.

- SFT-CHEM-BOND-ORDER-001
- SFT-CHEM-BOND-LENGTH-STRENGTH-001
- SFT-CHEM-MOL-MOLECULE-001

Generated grammar. Generate the literal product of the registered intermolecular carrier, support, identity, recurrence, boundary, strength, record and extension choices.

Boundary: Every finite interaction support joining two or more already complete molecular carriers while retaining each molecular identity and the boundary between inter- and intramolecular support.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `distinct-molecular-carriers__between-whole-interaction-support__constituent-identities-retained__collective-recurrence__explicit-molecular-boundary__source-bounded-interaction-record__carrier-channel-recurrence-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carriers	distinct-molecular-carriers	one-molecule-internal-edge	An internal edge is intramolecular support.
support	between-whole-interaction-support	proximity-without-channel	Proximity alone supplies no interaction trace.
identity	constituent-identities-retained	constituents-merged-erased	Erasing each molecule changes the class to a new bonded carrier.
recurrence	collective-recurrence	transient-coincidence	A coincidence without response cannot organize an assembly.
boundary	explicit-molecular-boundary	inter-intra-conflation	Conflation makes every covalent edge intermolecular.
strength	source-bounded-interaction-record	universal-weaker-law	Not every context forces one strength ordering.
record	carrier-channel-recurrence-trace	force-name-only	A force name cannot reconstruct endpoints and response.
extension	no-extra-rule	free-force-family	An imported family can select desired interactions.

Adverse controls. All mandatory controls passed:

- SFT-CHEM-MOL-INTERMOLECULAR-001

Generated grammar. Generate the literal product of the registered supramolecular components, joining, recognition, reversal, closure, scope, record and extension choices.

Boundary: Every finite assembly of multiple complete molecular carriers joined through reversible recognition support, with all components recoverable and the collective whole separately distinguishable.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `multiple-molecular-components__noncovalent-interaction-support__complementary-recognition__reversible-component-release__assembled-whole-identity__finite-declared-assembly__component-recognition-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
components	multiple-molecular-components	single-molecule-only	A supramolecular assembly contains multiple molecular components.
joining	noncovalent-interaction-support	new-internal-covalent-graph	Replacing components by one covalent graph erases the supramolecular boundary.
recognition	complementary-recognition	arbitrary-collision	A collision has no complementary selection trace.
reversal	reversible-component-release	components-unrecoverable	If components cannot be recovered, their identities were not retained.
closure	assembled-whole-identity	components-only	Separate components do not form an assembled whole.
scope	finite-declared-assembly	completed-infinite-assembly	A completed infinity is not generated.
record	component-recognition-trace	assembly-name-only	A name cannot reconstruct recognition and release.
extension	no-extra-rule	free-host-guest-rule	An exception can force any desired assembly.

Adverse controls. All mandatory controls passed:

Generated grammar. Generate the literal product of the registered molecular-network nodes, edges, connectivity, paths, boundary, composition, record and extension choices.

Boundary: Every finite generated set of molecular nodes and registered interaction edges whose maximal declared component is connected, with complete node, edge, path and boundary provenance.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `finite-molecular-node-set__registered-interaction-edges__connected-maximal-component__complete-reachability-census__finite-maximal-boundary__node-identities-retained__complete-network-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
nodes	finite-molecular-node-set	anonymous-node-count	A count cannot recover molecular identities.
edges	registered-interaction-edges	implicit-relatedness	An implicit relation cannot be audited.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
connectivity	connected-maximal-component	disconnected-union-called-one	Disconnected components are not one connected whole.
paths	complete-reachability-census	selected-path-only	One favorable path cannot establish network connectivity.
boundary	finite-maximal-boundary	unbounded-network-name	An unbounded name does not enumerate a finite object.
composition	node-identities-retained	network-erases-molecules	Nodes remain chemical carriers, not anonymous points.
record	complete-network-trace	network-answer-only	A connectivity answer cannot reproduce the network.
extension	no-extra-rule	free-connectivity-edge	Adding an ungenerated edge can force connectedness.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt sha256: aecb155adfee2fa5c2569fcce2754efa066481a4569263794de20d763d1eb430.
- **tampered_source:** passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256: 88618a1b00901ee0c581709ea8f5ed231b4d9e37c51f0c9d5a4ec7d4bcb94730.
- **tampered_artifact:** passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt sha256: 0d5086ed6a62b7e51f3ae5bef5470bf27fc01435c48ec2fd806f412699448e52.
- **boundary:** passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt sha256: 134c1b01b41fb77ae299a443f0fe0be5edc83e08dd803e6331c14bdef0cef7e.

Independent reconstruction. Implementation hash

sha256: 4803b87a071efe0f05f28748a53f932a80b12b5025d108a6bceb53444e66f1cf; independent certificate sha256: 1c37d683d2ac8ff6c01fb6d7e2afe60fa7ea9d0dc2d0ba54915c360000eaacdf; external-validation hash sha256: 9387d741c918a7c70b1789dd3464e50e4321a4eabc8cea21f5e7e279d2c3790b. The independent program regenerates the declared product and sole survivor without importing the derivation implementation.

Post-seal external check. Target content was opened only after the matching prediction seal: **True**. All registered rows were preserved: **True**. The capability-isolation and custody certificates passed. External source identities:

- IUPAC-GOLD-BOOK-N04112-2026

Comparison records:

- molecular-network-iupac-n04112: predicted
finite-molecular-node-set__registered-interaction-edges__connected-maximal-component__complete-network-trace;
source-derived
finite-molecular-node-set__registered-interaction-edges__connected-maximal-component__complete-network-trace; exact match **True**
- deliberately tampered unfavorable control rejected

Falsification boundary: The claim fails if the official molecular-network record lacks molecular nodes, interaction links or connected organization, or if a changed row is accepted.

Measurement receipt: sha256: 47729bac3b3ad9a5cebd8e8713750b5bc9a4aed2f837c88db297524aa655a667.

(sha256:a146d63f8340f0cf5043e1f9fe2f1cfa8e5fa7c3bf27b8a409e665f40ae2c046)

Registered target identities:

- molecular-network-iupac-n04112 from IUPAC-GOLD-BOOK-N04112-2026

Meaning. Bonding and molecular structure are exact joint recurrences over held atomic, electron, adjacency and orientation support rather than imported molecular pictures. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no chemical dictionary, coordinate archive, fitted force field, measured geometry or V2 answer may select a candidate
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- no free, fitted, learned or target-derived parameter
- no application or opaque prediction result
- no claim that topology alone predicts every measured coordinate or energy
- external content remains inaccessible until after the consequence is sealed
- Every finite generated set of molecular nodes and registered interaction edges whose maximal declared component is connected, with complete node, edge, path and boundary provenance.

Immutable identities. Source manifest

12. Acid-base, electronegativity, redox and electrochemistry foundations - 10 admitted claims

Transfer sense and charge orientation are held labels; no negative proof magnitude enters the derivation. This entire registered subcategory is included; no proper subset is presented as field completion.

38. Conjugate acid-base partition

Claim identity: SFT-CHEM-AB-ACID-BASE-001

Question and theorem. A conjugate acid/base relation is a pair of retained chemical identities differing by exactly one named proton carrier: the protonated member donates it and the deprotonated member accepts it.

two-conjugate-identities__one-held-proton-occurrence__proton-donor-role__proton-acceptor-role__differ-by-one-proton

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-CHEM-MOL-INTERMOLECULAR-001

Generated grammar. Generate the literal product of the registered conjugate pair, carrier, acid role, base role, difference, orientation, record and extension choices.

Boundary: Every finite generated pair of chemical carriers related by exactly one retained proton occurrence, with the protonated member able to donate that occurrence and the deprotonated member able to accept it.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `two-conjugate-identities__one-held-proton-occurrence__proton-donor-role__proton-acceptor-role__differ-by-one-proton__held-donor-acceptor-orientation__pair-and-proton-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
pair	two-conjugate-identities	one-species-label	A conjugate relation compares two carrier identities.
carrier	one-held-proton-occurrence	anonymous-hydrogen-count	A count cannot trace the transferred occurrence.
acid-role	proton-donor-role	acid-by-name	A name cannot establish a transition.
base-role	proton-acceptor-role	base-by-name	A name cannot establish a transition.
difference	differ-by-one-proton	unbounded-composition-change	Additional changes destroy conjugacy.
orientation	held-donor-acceptor-orientation	signed-acidity-scalar	A signed scalar is not a carrier trace.
record	pair-and-proton-trace	acid-base-answer-only	An answer cannot reconstruct conjugacy.
extension	no-extra-rule	free-acid-base-exception	An exception can label arbitrary species.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt `sha256:c636c0c317cb207c4839f718a739e5a683b6040155125536f9280ca737ac0e4c`.

- SFT-CHEM-BOND-IONIC-001
- SFT-CHEM-MOL-MOLECULE-001
- SFT-CHEM-MOL-INTERMOLECULAR-001
- SFT-CHEM-AB-ACID-BASE-001

Generated grammar. Generate the literal product of the registered proton carrier, source, destination, transition, identity, closure, record and extension choices.

Boundary: Every finite chemical transition in which one named proton carrier leaves one registered donor occurrence and enters one distinct registered acceptor occurrence with identical carrier identity before and after.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *one-named-proton-carrier__registered-donor__registered-acceptor__donor-to-acceptor-transfer__same-carrier-before-after__complete-endpoint-closure__carrier-endpoint-transition-trace__no-extra-rule*.

Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	one-named-proton-carrier	proton-count-only	A count cannot establish conservation of an occurrence.
source	registered-donor	source-erased	Without a donor, the carrier could be created freely.
destination	registered-acceptor	destination-erased	Without an acceptor, the carrier could be lost.
transition	donor-to-acceptor-transfer	copy-or-delete	Copying or deleting violates carrier conservation.
identity	same-carrier-before-after	before-after-carrier-change	A changed carrier is not transfer conservation.
closure	complete-endpoint-closure	unpaired-composition-change	Unpaired change leaves the reaction record open.
record	carrier-endpoint-transition-trace	product-label-only	A product label cannot reconstruct the path.
extension	no-extra-rule	free-proton-source	A free source can force any reaction.

Adverse controls. All mandatory controls passed:

Generated grammar. Generate the literal product of the registered Lewis endpoints, support, donor, acceptor, joining, conservation, record and extension choices.

Boundary: Every finite donor/acceptor pair joined by one exclusion-preserving pair of named electron occurrences, with both electron identities conserved and the donor/acceptor orientation retained.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `distinct-donor-acceptor__two-electron-occurrences__pair-donor-support__pair-acceptor-support__shared-or-transferred-pair__both-electron-identities-retained__endpoint-pair-joining-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
endpoints	distinct-donor-acceptor	one-unoriented-species	The relation requires donor and acceptor roles.
support	two-electron-occurrences	single-electron-only	The registered relation concerns paired support.
donor	pair-donor-support	electron-pair-name-only	A name cannot demonstrate available support.
acceptor	pair-acceptor-support	unregistered-vacancy	An unregistered destination cannot close the interaction.
joining	shared-or-transferred-pair	copied-electron-pair	Copying violates exclusion and conservation.
conservation	both-electron-identities-retained	electron-identity-erased	Erasure cannot reverse the relation.
record	endpoint-pair-joining-trace	Lewis-label-only	A label cannot reconstruct pair support.
extension	no-extra-rule	free-orbital-premise	An imported orbital rule can select a desired classification.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256 : 2cc98aa40593481481ad39b0cb07b7ce428222ea723733f562c37b1394b2b6b6.
- **tampered_source:** passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256 : 95cc34d98ca5a838b98c1074a1db31ed70571fbb0c387b70c5e910d134f18cab.
- **tampered_artifact:** passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt
sha256 : c1fa64533d715cd9e3911fa10b34f9b093332ff954c844029a150f2f90ab4fcf.
- **boundary:** passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt
sha256 : abc13b877a1bebe4f04b54c9618bdc2137ed324f325e4d0f3499a6153c8680f6.

Independent reconstruction. Implementation hash

sha256 : 5e16152a66733442a6bde36d7de224f715f0f64f53c671e108eb36c57deef79f; independent certificate sha256 : 8bfe72a6239326e94c2ec7358fbe227e047702cb5ccf66ba4f41343be1deaa26; external-validation hash sha256 : a471d23d6e04a1b399b41fef7902f4aaf130a1ecda942e25f025a021a5a14570. The independent program regenerates the declared product and sole survivor without importing the derivation implementation.

Post-seal external check. Target content was opened only after the matching prediction seal: **True**. All registered rows were preserved: **True**. The capability-isolation and custody certificates passed. External source identities:

- IUPAC-GOLD-BOOK-LEWIS-COMPOSITE-2026

Comparison records:

- lewis-acid-base-iupac-composite: predicted
electron-pair-donor__electron-pair-acceptor__shared-or-transferred-pair__pair-conserved; source-derived
electron-pair-donor__electron-pair-acceptor__shared-or-transferred-pair__pair-conserved; exact match **True**
- deliberately tampered unfavorable control rejected

Falsification boundary: The claim fails if the authoritative Lewis record lacks an electron-pair donor, electron-pair acceptor or conserved pair relation, or if a changed row is accepted.

Measurement receipt: sha256 : 5d0525fb63f86d96bd0477af62d7822ba68677bb7445231b0cbf9fc00e5f9776.

(sha256:9fa013b12d6d0e3f305883a0db53dac7484e292e0288e2c3d0ba9625cfb2011c)

Registered target identities:

- lewis-acid-base-iupac-composite from IUPAC-GOLD-BOOK-LEWIS-COMPOSITE-2026

Meaning. Acid/base and redox laws retain transfer orientation as held labels, not negative proof magnitudes, and preserve every donor, acceptor, charge and boundary carrier. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no acid/base dictionary, pH scale, equilibrium equation, dissociation constant, measured value or V2 answer may select a candidate
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- no free, fitted, learned or target-derived parameter
- no unpaired creation, copying or loss of a proton or electron carrier
- no claim that structural closure alone fixes every solution-dependent strength or capacity value

- external target content remains inaccessible until the prediction is sealed
- Every finite donor/acceptor pair joined by one exclusion-preserving pair of named electron occurrences, with both electron identities conserved and the donor/acceptor orientation retained.

Immutable identities. Source manifest

- SFT-CHEM-AB-ACID-BASE-001
- SFT-CHEM-AB-PROTON-TRANSFER-001
- SFT-CHEM-AB-LEWIS-001

Generated grammar. Generate the literal product of the registered amphoteric species, acid context, base context, context separation, duality, identity, record and extension choices.

Boundary: Every finite chemical carrier for which two separately registered contexts contain a valid donor transition and a valid acceptor transition involving that same retained species identity.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `same-species-identity__valid-donor-event__valid-acceptor-event__contexts-separately-held__both-roles-realized__species-identity-retained__dual-event-context-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
species	same-species-identity	two-unrelated-species	Dual behavior must belong to one retained carrier identity.
acid-context	valid-donor-event	acid-label-without-event	A label does not establish donation.
base-context	valid-acceptor-event	base-label-without-event	A label does not establish acceptance.
context	contexts-separately-held	roles-conflated	Conflation can assert incompatible events simultaneously.
duality	both-roles-realized	one-role-only	One role does not close amphoteric behavior.
identity	species-identity-retained	species-changed-between-roles	A changed carrier does not establish dual capacity.
record	dual-event-context-trace	amphoteric-label-only	A label cannot reproduce both contexts.
extension	no-extra-rule	free-dual-role-exception	An exception can admit any species.

Adverse controls. All mandatory controls passed:

- SFT-CHEM-AB-ACID-BASE-001
- SFT-CHEM-AB-PROTON-TRANSFER-001
- SFT-CHEM-AB-AMPHOTERIC-001

Generated grammar. Generate the literal product of the registered buffer components, support, acid response, base response, retention, capacity, record and extension choices.

Boundary: Every finite reservoir containing positive support of both members of a conjugate pair and two complementary response paths that consume added proton support or supply proton support to an added base within capacity.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `conjugate-pair-reservoir__positive-support-of-both__base-member-accepts-proton__acid-member-supplies-proton__conjugate-pair-retained__finite-source-bounded-capacity__pair-count-response-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
components	conjugate-pair-reservoir	single-unpaired-species	One species cannot supply both complementary responses.
support	positive-support-of-both	one-component-absent	An absent member leaves one response unavailable.
acid-response	base-member-accepts-proton	added-proton-unanswered	No response permits the proton distinction to remain open.
base-response	acid-member-supplies-proton	added-base-unanswered	No response permits proton removal without paired change.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
retention	conjugate-pair-retained	reservoir-identity-erased	A response without conjugate tracking cannot be reversed.
capacity	finite-source-bounded-capacity	unlimited-buffer-claim	A finite reservoir cannot have unlimited capacity.
record	pair-count-response-trace	pH-answer-only	A pH value cannot reconstruct composition and response.
extension	no-extra-rule	free-equilibrium-fit	A fitted equation can force a measured response.

Adverse controls. All mandatory controls passed:

Generated grammar. Generate the literal product of carrier, support, comparison, orientation, tie, extension, record and extra-rule choices.

Boundary: Every finite pairwise comparison of two named atomic occurrences joined by one shared electron-labelled support, with the complete recurrence trace determining endpoint preference or an explicitly retained tie.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `two-named-atomic-occurrences__one-shared-electron-support__complete-endpoint-recurrence-comparison__held-preferred-endpoint__trace-equivalence-class__transitive-preorder-closure__complete-comparison-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carriers	two-named-atomic-occurrences	anonymous-element-values	Values erase endpoint identity.
support	one-shared-electron-support	free-affinity-scalar	A scalar imports the ordering.
comparison	complete-endpoint-recurrence-comparison	name-selected-order	Names cannot select preference.
orientation	held-preferred-endpoint	signed-difference	A signed magnitude violates the proof domain.
ties	trace-equivalence-class	forced-strict-order	Equal complete traces cannot be ordered uniquely.
extension	transitive-preorder-closure	pairwise-cycle-admitted	A cycle destroys lawful ordering.
record	complete-comparison-trace	rank-answer-only	A rank cannot reconstruct comparisons.
extra	no-extra-rule	free-scale-constant	A scale constant can tune any ordering.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt `sha256:0b4cdc1f4aee52d241ee6c50286036754d52606fb34b3123efdf8788925569`.
- `tampered_source`: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt `sha256:75b4db050fe85f16506da2c636dce9c265cf2318fc57636085303aa2888a7b34`.

- **tampered_artifact:** passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt
sha256 : e328e529b6c738adc4b931a31da3aa43513455bfb2797dff915c4b9c5f39bc88.
- **boundary:** passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt

Registered target identities:

- electronegativity-iupac-composite from IUPAC-GOLD-BOOK-ELECTRONEGATIVITY-COMPOSITE-2026

Meaning. Acid/base and redox laws retain transfer orientation as held labels, not negative proof magnitudes, and preserve every donor, acceptor, charge and boundary carrier. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no electronegativity scale, oxidation-state table, electrode potential, external definition, measured value or V2 result may select a candidate
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- no free, fitted, learned or target-derived parameter
- no electron carrier may be created, copied, silently erased or assigned to two endpoints
- no qualitative structural law is represented as a parameter-free prediction of a measured decimal scale
- external target content remains inaccessible until the complete prediction is sealed
- Every finite pairwise comparison of two named atomic occurrences joined by one shared electron-labelled support, with the complete recurrence trace determining endpoint preference or an explicitly retained tie.

Immutable identities. Source manifest

- SFT-CHEM-AB-BUFFER-001
- SFT-CHEM-ELECTRONEGATIVITY-001

Generated grammar. Generate the literal product of bond, affinity, support, partition, orientation, closure, record and extra-rule choices.

Boundary: Every finite covalent bond whose two named endpoints have unequal complete affinity traces for the same shared support, producing one held orientation of the support partition while retaining the bond whole.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `registered-covalent-bond__unequal-complete-affinity__same-shared-electron-support__unequal-shared-partition__held-partial-charge-fibres__paired-endpoint-response__bond-affinity-partition-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
bond	registered-covalent-bond	two-unjoined-atoms	Polarity belongs to a shared bond.
affinity	unequal-complete-affinity	equal-or-unknown-affinity	No direction follows from equality or missing evidence.
support	same-shared-electron-support	different-electrons-compare	Different support cannot orient one bond.
partition	unequal-shared-partition	full-transfer	Full transfer changes the bonding class.
orientation	held-partial-charge-fibres	negative-charge-number	A negative scalar is unnecessary.
closure	paired-endpoint-response	one-endpoint-only	One endpoint leaves the bond record open.
record	bond-affinity-partition-trace	polar-label-only	A label cannot reproduce the comparison.
extra	no-extra-rule	free-polarity-threshold	A threshold imports a parameter.

- SFT-CHEM-BOND-POLARITY-001

Generated grammar. Generate the literal product of whole, partition, unequal-bond, equal-bond, count, conservation, record and extra-rule choices.

Boundary: Every finite bonded chemical whole under one declared ionic-approximation partition, assigning each bond-electron occurrence exactly once by complete affinity order (or equal division for tied endpoints), retaining atom identity, orientation and total carrier conservation.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-bonded-chemical-whole__declared-ionic-approximation__assign-to-preferred-endpoint__equal-endpoint-division__positive-count-plus-held-orientation__each-electron-assigned-once__atom-bond-assignment-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
whole	complete-bonded-chemical-whole	isolated-atom-answer	Oxidation accounting is composition-relative.
partition	declared-ionic-approximation	unstated-electron-rule	An unstated rule permits arbitrary answers.
unequal-bond	assign-to-preferred-endpoint	split-despite-preference	It contradicts complete affinity order.
equal-bond	equal-endpoint-division	arbitrary-endpoint	Equal traces cannot choose an endpoint.
count	positive-count-plus-held-orientation	signed-integer-primitive	A signed number hides orientation.
conservation	each-electron-assigned-once	electron-created-or-lost	Open assignment violates the whole.
record	atom-bond-assignment-trace	oxidation-number-only	A number cannot reproduce the assignment.
extra	no-extra-rule	free-state-table	A table can select desired values.

Adverse controls. All mandatory controls passed:

- SFT-CHEM-AB-AMPHOTERIC-001
- SFT-CHEM-AB-BUFFER-001
- SFT-CHEM-REDOX-OXIDATION-STATE-001

Generated grammar. Generate the literal product of carrier, donor, acceptor, coupling, identity, accounting, record and extra-rule choices.

Boundary: Every finite closed electron-labelled transfer between distinct chemical endpoints, with identical carrier identity before and after and paired donor loss/acceptor gain or their complete oxidation-assignment equivalents.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `named-electron-carrier__registered-oxidation-endpoint__registered-reduction-endpoint__one-paired-transfer__same-carrier-before-after__opposed-assignment-updates__carrier-endpoint-coupling-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	named-electron-carrier	anonymous-charge-change	It cannot establish electron conservation.
donor	registered-oxidation-endpoint	donor-erased	The carrier could be freely created.
acceptor	registered-reduction-endpoint	acceptor-erased	The carrier could be lost.
coupling	one-paired-transfer	independent-half-changes	One open half violates conservation.
identity	same-carrier-before-after	different-carrier-after	That is replacement, not transfer.
accounting	opposed-assignment-updates	one-sided-state-change	One side cannot close the assignment.
record	carrier-endpoint-coupling-trace	redox-label-only	A label cannot reverse the event.
extra	no-extra-rule	free-electron-source	A free source breaks closure.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:93dc0f0dca3a8d0637be0f8366a9c9f7efbabe274caf377dc0d68648b26162ca.
- **tampered_source:** passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256:135e22bd09a5e264309f9102ca7412c0debb155083e86f4b50edca884843fd63.
- **tampered_artifact:** passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt
sha256:f7c8cad06259b068ad6ad36db72aebfbdde432e2cb83719d9e7cf26d4c680e0b.
- **boundary:** passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt
sha256:fcdd87f9ce4203ac4f9b1284a0db8ea61f1f4ab2f08bbe6176dbaf3e6d2dcd12c.

Independent reconstruction. Implementation hash

sha256:a4955d74f704c817aac676ffc3af783df9b6bb7f328576e68920563fed210eab; independent certificate sha256:76ec599dda0c5859c14d2c306a87f6205b3a6c018234b8512be63c2f3d9c3db8; external-validation hash sha256:5bc8adc3aa6a4a9ec5f46723b60e70daf98cf6ff95fba9c9feab41dc99b85cc6. The independent program regenerates the declared product and sole survivor without importing the derivation implementation.

Post-seal external check. Target content was opened only after the matching prediction seal: **True**. All registered rows were preserved: **True**. The capability-isolation and custody certificates passed. External source identities:

- IUPAC-GOLD-BOOK-REDOX-COMPOSITE-2026

Comparison records:

- redox-coupling-iupac-composite: predicted
oxidation-electron-loss__reduction-electron-gain__paired-half-reactions__electron-transfer-conserved; source-derived
oxidation-electron-loss__reduction-electron-gain__paired-half-reactions__electron-transfer-conserved; exact match **True**
- deliberately tampered unfavorable control rejected

Falsification boundary: The claim fails if the authority record lacks paired oxidation/reduction, electron loss/gain or conserved transfer, or if a changed row is accepted.

Measurement receipt: sha256:0e526b5a363f71cc9197d97440720c42ed67a2e6d957838580a9b7294c44e4ab.

Registered target identities:

- redox-coupling-iupac-composite from IUPAC-GOLD-BOOK-REDOX-COMPOSITE-2026

Meaning. Acid/base and redox laws retain transfer orientation as held labels, not negative proof magnitudes, and preserve every donor, acceptor, charge and boundary carrier. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no electronegativity scale, oxidation-state table, electrode potential, external definition, measured value or V2 result may select a candidate
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- no free, fitted, learned or target-derived parameter
- no electron carrier may be created, copied, silently erased or assigned to two endpoints

- no qualitative structural law is represented as a parameter-free prediction of a measured decimal scale
- external target content remains inaccessible until the complete prediction is sealed
- Every finite closed electron-labelled transfer between distinct chemical endpoints, with identical carrier identity before and after and paired donor loss/acceptor gain or their complete oxidation-assignment equivalents.

Immutable identities. Source manifest

- SFT-CHEM-AB-BUFFER-001
- SFT-CHEM-REDOX-OXIDATION-STATE-001
- SFT-CHEM-REDOX-COUPLING-001

Generated grammar. Generate the literal product of site, electron-path, ionic-path, coupling, work, orientation, record and extra-rule choices.

Boundary: Every finite separated pair of coupled redox sites with a complete electron path from oxidation to reduction, a complete compensating ionic path, retained chemical boundaries and source-bounded work transfer.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `distinct-oxidation-reduction-sites__complete-external-electron-path__complete-compensating-ionic-path__one-redox-transfer-cycle__source-bounded-work-transfer__held-cell-orientation__sites-paths-transfer-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
sites	distinct-oxidation-reduction-sites	one-conflated-site	Separation is required for an external path.
electron-path	complete-external-electron-path	electron-teleportation	It omits the transfer trace.
ionic-path	complete-compensating-ionic-path	charge-accumulation-unclosed	Accumulation halts sustained transfer.
coupling	one-redox-transfer-cycle	independent-half-reactions	Unpaired halves violate conservation.
work	source-bounded-work-transfer	free-energy-output	Untraced work creates support.
orientation	held-cell-orientation	negative-potential-primitive	A negative scalar is not needed.
record	sites-paths-transfer-trace	cell-label-only	A label cannot reproduce either path.
extra	no-extra-rule	free-electrode-potential	A fitted potential can select behavior.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt `sha256:63371e499dce6d50287fc484b0f0cbf70c3dfd532ed6b9703aa7bf01d4945db0`.

• SFT-CHEM-ELECTROCHEM-CELL-001

Generated grammar. Generate the literal product of source, input, output, carrier, change, orientation, record and extension choices.

Boundary: Every finite source-bound chemical transition between complete named reactant and product organizations, conserving every elemental carrier while changing at least one registered chemical relation.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `source-bound-transition__complete-reactant-organization__complete-product-organization__all-elemental-carriers-conserved__at-least-one-relation-changed__held-reactant-product-orientation__complete-endpoint-carrier-relation-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
source	source-bound-transition	unregistered-transformation	No chemical provenance is retained.
input	complete-reactant-organization	reactants-erased	A product alone cannot define change.
output	complete-product-organization	products-erased	An input alone cannot define change.
carriers	all-elemental-carriers-conserved	element-created-or-lost	It violates chemical closure.
change	at-least-one-relation-changed	identity-transition	No changed relation means no reaction event.
orientation	held-reactant-product-orientation	unordered-endpoints	Direction cannot be audited.
record	complete-endpoint-carrier-relation-trace	reaction-name-only	A name cannot reproduce the transition.
extra	no-extra-rule	free-reaction-exception	An exception can admit arbitrary change.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt `sha256:fb754a6029d272793d88a9743f1a5ca1c2e28481c465d2910713413cb2b900f3`.

49. Reaction mechanism as complete elementary-step trace

Claim identity: SFT-CHEM-RXN-MECHANISM-001

Question and theorem. A reaction mechanism is the complete ordered composition of elementary chemical transitions whose internal states join exactly and whose external endpoints equal the overall reaction.

ordered-elementary-step-word__adjacent-state-composition__declared-indivisible-steps__internal-states-held__same-overall-endpoints

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001

- SFT-CHEM-ELECTROCHEM-CELL-001
- SFT-CHEM-RXN-IDENTITY-001

Generated grammar. Generate the literal product of step, adjacency, elementarity, internal-state, endpoint, conservation, record and extension choices.

Boundary: Every finite ordered sequence of elementary chemical transitions whose adjacent states compose exactly and whose endpoint composition equals one registered overall reaction after internal states cancel.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `ordered-elementary-step-word__adjacent-state-composition__declared-indivisible-steps__internal-states-held__sa`

me-overall-endpoints__carrier-conservation-each-step__complete-ordered-step-trace__no-extra-rule. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
steps	ordered-elementary-step-word	unordered-step-list	Unordered changes do not form a path.
adjacency	adjacent-state-composition	unmatched-step-endpoints	The proposed path is discontinuous.
elementarity	declared-indivisible-steps	hidden-substeps	The trace is incomplete at its declared boundary.
internal	internal-states-held	internal-species-erased	Cancellation cannot be audited.
endpoints	same-overall-endpoints	different-overall-reaction	The path does not explain the claim.
conservation	carrier-conservation-each-step	carrier-loss-between-steps	Local openness breaks global closure.
record	complete-ordered-step-trace	mechanism-label-only	A label cannot reproduce the path.
extra	no-extra-rule	free-hidden-path	An unseen path can explain any endpoint.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt sha256: 2b08b15144e7448122e88a2a305aad7c8ac006ff06273c79a20de192a4534887.

- SFT-CHEM-ELECTROCHEM-CELL-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-RXN-MECHANISM-001

Generated grammar. Generate the literal product of identity, production, consumption, order, net, retention, record and extension choices.

Boundary: Every named chemical species produced by one internal elementary step and consumed by a later step of the same complete mechanism, absent from the net endpoint difference but retained in the path trace.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `named-internal-species__produced-by-one-step__consumed-by-later-step__production-precedes-consumption__cancels-from-net-endpoints__intermediate-path-identity-held__production-consumption-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
identity	named-internal-species	anonymous-transient	Its recurrence cannot be checked.
production	produced-by-one-step	not-produced	It is not generated by the mechanism.
consumption	consumed-by-later-step	not-consumed	It remains a product, not an intermediate.
order	production-precedes-consumption	consumed-before-produced	The trace is causally open.
net	Cancels-from-net-endpoints	present-in-net-products	It is then an endpoint product.
retention	intermediate-path-identity-held	intermediate-erased	Erasure destroys the mechanism proof.
record	production-consumption-trace	intermediate-name-only	A name lacks step witnesses.
extra	no-extra-rule	free-short-lived-premise	Lifetime alone cannot define path role.

Adverse controls. All mandatory controls passed:

- SFT-CHEM-RXN-MECHANISM-001

Generated grammar. Generate the literal product of path, source, transition, reference, minimality, orientation, record and extension choices.

Boundary: Every finite generated reaction path from a retained reactant organization to product organization, with the least additional source support needed to reach its unique highest transition boundary recorded relative to the reactant boundary.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-generated-reaction-path__source-bound-support-account__highest-path-boundary__reactant-relative-support__least-crossing-support__held-reactant-to-transition-orientation__path-source-boundary-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
path	complete-generated-reaction-path	endpoint-only	No crossing requirement is represented.
source	source-bound-support-account	free-energy-number	An imported number selects the barrier.
transition	highest-path-boundary	arbitrary-high-state	It need not lie on the path.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
reference	reactant-relative-support	absolute-energy-origin	An arbitrary origin imports a parameter.
minimality	least-crossing-support	nonminimal-added-support	Extra support does not define activation.
orientation	held-reactant-to-transition-orientation	signed-barrier	A negative scalar is outside the proof domain.
record	path-source-boundary-trace	activation-value-only	A value cannot reproduce the path.
extra	no-extra-rule	free-temperature-fit	A fitted input can tune the result.

Meaning. Reactions are complete transition maps; mechanisms, intermediates, activation, rate, equilibrium, direction, phase and photochemical response retain source, condition and observation boundaries. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no reaction dictionary, mechanism database, rate equation, Arrhenius law, equilibrium constant, measured target or V2 answer may select a candidate
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- no free, fitted, learned or target-derived parameter
- no chemical carrier may be created, copied or silently erased
- an absent dependence or event is an empty structural form, never numerical zero
- external target content remains inaccessible until the prediction is sealed
- Every finite generated reaction path from a retained reactant organization to product organization, with the least additional source support needed to reach its unique highest transition boundary recorded relative to the reactant boundary.

Immutable identities. Source manifest

52. Reaction rate from counted transitions

Claim identity: SFT-CHEM-KIN-RATE-001

Question and theorem. Reaction rate is the exact positive count of completed instances of one registered reaction per positive reference recurrence and retained observation boundary, with conditions source-bound.

one-registered-reaction-event__positive-completed-event-count__positive-reference-recurrence-count__registered-species-observation-boundary__event-count-per-recurrence

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-CHEM-ELECTROCHEM-CELL-001
- SFT-CHEM-RXN-IDENTITY-001

Generated grammar. Generate the literal product of event, count, duration, boundary, relation, condition, record and extension choices.

Boundary: Every finite observation boundary with a positive counted set of completed instances of one reaction transition and a positive counted set of registered recurrence intervals, retaining species amount and conditions as source records.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `one-registered-reaction-event__positive-completed-event-count__positive-reference-recurrence-count__registered-species-observation-boundary__event-count-per-recurrence__source-bound-condition-record__event-duration-boundary-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
event	one-registered-reaction-event	unidentified-change	Events cannot be counted consistently.
count	positive-completed-event-count	continuous-rate-primitive	It imports a continuum quantity.
duration	positive-reference-recurrence-count	clock-free-count	No rate relation follows.
boundary	registered-species-observation-boundary	unbounded-observation	Amount change is undefined.
relation	event-count-per-recurrence	fitted-rate-value	A fitted value is target-derived.
conditions	source-bound-condition-record	conditions-erased	Rates cannot be compared reproducibly.
record	event-duration-boundary-trace	rate-answer-only	It cannot reconstruct events or time.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
extra	no-extra-rule	free-rate-constant	A constant can tune any target.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

- SFT-CHEM-ELECTROCHEM-CELL-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-KIN-RATE-001

Generated grammar. Generate the literal product of reactant, intervention, response, multiplicity, independence, scope, record and extension choices.

Boundary: Every finite source-bound intervention census for one reactant coordinate, retaining the exact multiplicity with which distinguishable occurrences of that coordinate participate in the rate dependency; absence is represented structurally.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `named-reactant-coordinate__source-bound-coordinate-intervention__complete-rate-response-census__forced-dependency-occurrence-count__empty-dependency-form__condition-and-mechanism-bound-order__reactant-intervention-response-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
reactant	named-reactant-coordinate	anonymous-concentration	The dependency coordinate is lost.
intervention	source-bound-coordinate-intervention	passive-correlation	It cannot establish dependence.
response	complete-rate-response-census	single-rate-answer	Multiplicity cannot be recovered.
multiplicity	forced-dependency-occurrence-count	stoichiometric-coefficient-assumed	Kinetic and endpoint counts need not coincide.
independence	empty-dependency-form	numerical-zero-order	Zero is prohibited as proof quantity.
scope	condition-and-mechanism-bound-order	universal-condition-free-order	Observed order can be condition-specific.
record	reactant-intervention-response-trace	order-number-only	It cannot reproduce the intervention.
extra	no-extra-rule	free-power-law-fit	A fit can select the exponent.

Adverse controls. All mandatory controls passed:

- deliberately tampered unfavorable control rejected

Falsification boundary: The claim fails if the authority record lacks continuing opposed reactions, equal rates or constant macroscopic composition under fixed conditions, or if a changed row is accepted.

Measurement receipt: sha256:c784f640938b7ee31b298152ea612f30f6022459eaa06752018f4d4b8f16b6a1.

Isolation certificate: sha256:03a826df6d439759177d91f17085fee068cb7ce9b682c7a44746496c601b1e41.

Custody certificate: sha256:d15804f433bd45d106fa58418e2eebb201ef447cef42f83a700e563104fa76e0.

Registered source descriptions:

- International Union of Pure and Applied Chemistry: <https://goldbook.iupac.org/terms/view/C01023> (sha256:8720b60c684dd7869500da1577be0fa91f2362e02420d755fbbd1abbad6582b)

Registered target identities:

- chemical-equilibrium-iupac-composite from IUPAC-GOLD-BOOK-CHEMICAL-EQUILIBRIUM-COMPOSITE-2026

Meaning. Reactions are complete transition maps; mechanisms, intermediates, activation, rate, equilibrium, direction, phase and photochemical response retain source, condition and observation boundaries. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no reaction dictionary, mechanism database, rate equation, Arrhenius law, equilibrium constant, measured target or V2 answer may select a candidate
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- no free, fitted, learned or target-derived parameter
- no chemical carrier may be created, copied or silently erased
- an absent dependence or event is an empty structural form, never numerical zero
- external target content remains inaccessible until the prediction is sealed
- Every finite reversible chemical transition on one closed observation boundary for which forward and reverse event recurrences persist while their complete carrier changes pair and the retained macroscopic composition class recurs.

Immutable identities. Source manifest

Generated grammar. Generate the literal product of reaction, input, output, conservation, orientation, condition, record and extension choices.

Boundary: Every finite closed chemical reaction with complete source-bound energy carriers at reactant and product boundaries, held transfer orientation, phase, conditions and reference state.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `registered-reaction-trace__complete-reactant-energy-support__complete-product-energy-support__energy-transfer-balanced__held-absorbed-or-released-orientation__phase-condition-reference-held__reaction-energy-source-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
reaction	registered-reaction-trace	energy-value-without-reaction	No chemical identity is retained.
input	complete-reactant-energy-support	reactant-energy-erased	The ledger cannot close.
output	complete-product-energy-support	product-energy-erased	The ledger cannot close.
conservation	energy-transfer-balanced	free-energy-creation	It violates closure.
orientation	held-absorbed-or-released-orientation	signed-heat-number	A signed scalar is unnecessary.
conditions	phase-condition-reference-held	condition-free-value	Thermochemical quantities are state-bound.
record	reaction-energy-source-trace	enthalpy-answer-only	It cannot reproduce accounting.
extra	no-extra-rule	free-calibration-fit	A fit can select any value.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt `sha256:f0d09549fc7aba9e3e959cdcd632a04ccd046cf9645b3a55925f0779021368d1`.

- SFT-CHEM-KIN-ORDER-001
- SFT-CHEM-EQ-CHEMICAL-001
- SFT-CHEM-THERMO-REACTION-001
- SFT-CHEM-THERMO-DIRECTION-001

Generated grammar. Generate the literal product of region, homogeneity, extent, boundary, coexistence, condition, record and extension choices.

Boundary: Every finite maximal connected chemical region whose complete intensive observation trace is homogeneous under the declared resolution, separated from a distinct region by a retained interface; coexistence is paired recurrence at that interface.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `maximal-connected-region__complete-intensive-trace-equivalence__extent-independent-class__retained-phase-interface__paired-interface-recurrence__temperature-pressure-composition-held__region-trace-interface-record__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
region	maximal-connected-region	arbitrary-sample-label	It does not define phase identity.
homogeneity	complete-intensive-trace-equivalence	single-point-observation	It cannot establish uniformity.
extent	extent-independent-class	size-dependent-phase	Phase identity is intensive.
boundary	retained-phase-interface	interface-erased	Distinct phases cannot be separated.
coexistence	paired-interface-recurrence	one-phase-only	No coexistence relation exists.
conditions	temperature-pressure-composition-held	condition-free-phase	Phase depends on source conditions.
record	region-trace-interface-record	phase-name-only	It cannot reproduce homogeneity.
extra	no-extra-rule	free-phase-diagram	An imported diagram selects the class.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt `sha256: eaad5bde6903bc5cb65e88d04f3ee3e8bd4a9421c6af7f9751047698beeb46b0`.

Registered target identities:

- chemical-phase-iupac-composite from IUPAC-GOLD-BOOK-CHEMICAL-PHASE-COMPOSITE-2026

Meaning. Reactions are complete transition maps; mechanisms, intermediates, activation, rate, equilibrium, direction, phase and photochemical response retain source, condition and observation boundaries. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no thermochemical table, spontaneity rule, phase diagram, solubility value, photochemical database, measured target or V2 answer may select a candidate
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- no free, fitted, learned or target-derived parameter
- no energy, matter or photon carrier may be created, copied or silently erased
- absence is an Empty structural form rather than numerical zero
- external target content remains inaccessible until the prediction is sealed
- Every finite maximal connected chemical region whose complete intensive observation trace is homogeneous under the declared resolution, separated from a distinct region by a retained interface; coexistence is paired recurrence at that interface.

Immutable identities. Source manifest

Generated grammar. Generate the literal product of solution, dissolution, balance, saturation, composition, condition, record and extension choices.

Boundary: Every finite solution boundary containing a retained solvent/solute organization and opposed dissolution/return transitions whose complete event supports pair at saturation while the macroscopic dissolved-composition class recurs.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: retained-solute-solvent-organization__dissolution-and-return-transitions__paired-opposed-event-support__source-bounded-capacity-boundary__macroscopic-dissolved-class-recurs__phase-temperature-pressure-held__solution-event-composition-trace__no-extra-rule. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
solution	retained-solute-solvent-organization	unidentified-mixture	Solute and solvent roles are lost.
dissolution	dissolution-and-return-transitions	one-way-dissolution-only	No equilibrium can close.
balance	paired-opposed-event-support	unpaired-event-support	Composition would drift.
saturation	source-bounded-capacity-boundary	free-solubility-number	A measured number imports the target.
composition	macroscopic-dissolved-class-recurs	microscopic-state-fixed	Individual events may continue.
conditions	phase-temperature-pressure-held	condition-free-solubility	Solubility changes with conditions.
record	solution-event-composition-trace	solubility-answer-only	It cannot reproduce the dynamics.
extra	no-extra-rule	free-equilibrium-fit	A fit can select any saturation.

Adverse controls. All mandatory controls passed:

Generated grammar. Generate the literal product of radiation, absorption, state, channel, conservation, selection, record and extension choices.

Boundary: Every finite chemical path initiated when one retained radiation carrier is absorbed by a named molecular carrier, producing a distinct excited-state support and a source-bound reaction or relaxation channel with complete energy accounting.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `one-retained-photon-carrier__carrier-absorbed-once__distinct-excited-state-support__source-bound-reaction-or-relaxation-channel__complete-photon-molecule-energy-ledger__generated-channel-census__photon-state-channel-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
radiation	one-retained-photon-carrier	anonymous-energy-input	It cannot establish carrier identity.
absorption	carrier-absorbed-once	photon-copied	Copying violates conservation.
state	distinct-excited-state-support	ground-state-unchanged	No excitation occurs.
channel	source-bound-reaction-or-relaxation-channel	unregistered-outcome	No chemical path is retained.
conservation	complete-photon-molecule-energy-ledger	energy-erased	The path cannot close.
selection	generated-channel-census	free-quantum-yield-fit	A fit can force outcomes.
record	photon-state-channel-trace	photochemical-label-only	It cannot reproduce excitation.
extra	no-extra-rule	free-spectral-rule	An imported rule selects a target.

Generated grammar. Generate the literal product of the eight registered binary coordinates; decide every form by carrier preservation, complete support, minimality and absence of an extra rule.

Boundary: Every finite source-bound reaction cycle whose catalyst entry, step occurrences, return identity, net endpoints and recurrence interval are completely recorded.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `reaction-cycle-participant__exact-catalyst-identity-returned__alternative-step-path-retained__reaction-rate-increased__net-reaction-unchanged__both-directions-share-path__complete-cycle-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
role	reaction-cycle-participant	ordinary-reactant-only	The carrier is consumed.
identity	exact-catalyst-identity-returned	carrier-identity-changed	It is not recovered.
path	alternative-step-path-retained	overall-reaction-only	No catalytic path is distinguished.
rate	reaction-rate-increased	rate-unchanged-by-cycle	No catalytic action occurs.
net	net-reaction-unchanged	catalyst-in-net-products	The carrier was consumed or produced.
direction	both-directions-share-path	one-direction-rule	A reversible cycle is incomplete.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
record	complete-cycle-trace	catalyst-name-only	Identity return cannot be checked.
extra	no-extra-rule	free-catalytic-fit	A fit can select the result.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256 : a0ae5548ab64a5314989e01db584c23471703055d234de86e8ecf9285c346a9e.

Generated grammar. Generate the literal product of the eight registered binary coordinates; decide every form by carrier preservation, complete support, minimality and absence of an extra rule.

Boundary: Every finite pair of balanced reaction mechanisms with common endpoints, complete intermediate and activation records, and one exact catalyst-return cycle.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `same-overall-reaction__alternative-reaction-mechanism__lower-activation-support__catalyst-cycle-retained__all-intermediates-balanced__conditions-held__pathwise-energy-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
endpoints	same-overall-reaction	different-overall-products	The paths are not alternatives.
mechanism	alternative-reaction-mechanism	step-trace-erased	No pathway comparison exists.
barrier	lower-activation-support	imported-energy-number	A target value is not forced.
carrier	catalyst-cycle-retained	catalyst-consumed	The cycle does not close.
conservation	all-intermediates-balanced	free-intermediate	Matter is unaccounted.
conditions	conditions-held	condition-free-path	Path availability is unbounded.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
record	pathwise-energy-trace	endpoint-answer-only	The alternative path is unreproducible.
extra	no-extra-rule	free-mechanism-choice	A choice can force any path.

Adverse controls. All mandatory controls passed:

63. Chemical reaction-network composition

Claim identity: SFT-CHEM-NET-REACTION-001

Question and theorem. A chemical reaction network is the complete finite directed incidence organization generated by balanced reaction steps sharing retained chemical-species identities, including branches, merges, cycles and external boundaries.

chemical-species-nodes__reaction-steps-connect-species__shared-species-compose-paths__source-product-boundary-held__all-generated-paths-retained

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

Generated grammar. Generate the literal product of the eight registered binary coordinates; decide every form by carrier preservation, complete support, minimality and absence of an extra rule.

Boundary: Every finite set of retained chemical-species carriers and balanced reaction-step incidences with complete external source/product boundaries.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `chemical-species-nodes__reaction-steps-connect-species__shared-species-compose-paths__source-product-boundary-held__all-generated-paths-retained__reaction-cycles-retained__complete-node-edge-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
species	chemical-species-nodes	anonymous-state-count	Chemical identities are lost.
reactions	reaction-steps-connect-species	unlabelled-adjacency	Transitions are chemically ambiguous.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
composition	shared-species-com pose-paths	isolated-reaction-list	Shared carriers are not composed.
boundary	source-product-bou ndary-held	open-unrecorded-flux	The network cannot balance.
branching	all-generated-path s-retained	single-path-only	Network alternatives are erased.
cycles	reaction-cycles-re tained	cycle-collapsed	Recurrence is lost.
record	complete-node-edge -trace	network-picture-only	The network cannot be replayed.
extra	no-extra-rule	free-network-topology	An imported graph selects the result.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

Registered target identities:

- reaction-network-iupac-composite from IUPAC-GOLD-BOOK-REACTION-NETWORK-COMPOSITE-2026

Meaning. Catalysis and interfaces preserve catalyst return, alternative pathways, reaction networks, autocatalysis, adsorption, colloids and cross-boundary transfer without fitted rates. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no catalyst dictionary, kinetic table, reaction network, surface model, colloid table, transfer equation, measured target or V2 answer may select a candidate
- no numerical zero, negative, irrational, imaginary or floating proof quantity
- no free, fitted, learned or target-derived parameter
- no chemical carrier, phase identity, interface or reaction step may be created, copied or silently erased
- absence is an Empty structural form rather than numerical zero
- external target content remains inaccessible until the prediction is sealed
- Every finite set of retained chemical-species carriers and balanced reaction-step incidences with complete external source/product boundaries.

Immutable identities. Source manifest

Generated grammar. Generate the literal product of the eight registered binary coordinates; decide every form by carrier preservation, complete support, minimality and absence of an extra rule.

Boundary: Every finite population of separated same-phase regions within a distinct continuous phase, with complete interfaces, sizes, positions, conditions and observation interval.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `dispersed-and-continuous-phases__finite-dispersed-particles__phase-interface-retained__particles-distributed-through-medium__particle-size-source-bounded__dispersion-condition-bounded__particle-interface-distribution-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
phases	dispersed-and-cont inuous-phases	single-uniform-phase	No dispersion exists.
extent	finite-dispersed-p articles	molecular-solution-only	No mesoscopic carrier is retained.
interface	phase-interface-re tained	phase-boundary-erased	Particle identity is lost.
distribution	particles-distribu ted-through-medium	one-settled-region	Dispersion is absent.
scale	particle-size-sour ce-bounded	size-free-label	Colloid identity is unbounded.
stability	dispersion-conditi on-bounded	eternal-stability-assumed	Persistence is condition-dependent.
record	particle-interface -distribution-trac e	colloid-name-only	Phase support cannot be checked.
extra	no-extra-rule	free-dispersion-fit	A fit can force stability.

Adverse controls. All mandatory controls passed:

Generated grammar. Generate the literal product of the eight registered binary coordinates; decide every form by complete carrier preservation, exact equivalence enumeration, minimality and absence of an extra rule.

Boundary: Every finite pair of equal-composition, equal-connectivity oriented molecular carriers with exhaustive mirror and proper-superposition tests.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `paired-stereoisomers__same-composition-and-connectivity__exact-mirror-relation__non-superposable-pair__opposed-configurations-held__chiral-observation-boundary__paired-map-and-observation-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
members	paired-stereoisomers	one-structure-only	No pair exists.
constitution	same-composition-and-connectivity	different-connectivity	They are constitutional isomers.
mirror	exact-mirror-relation	unrelated-orientations	The pair is not enantiomeric.
superposition	non-superposable-pair	superposable-pair	The reflected structures are identical.
orientation	opposed-configurations-held	orientation-erased	Opposed configurations merge.
environment	chiral-observation-boundary	universal-property-difference	Response depends on observation context.
record	paired-map-and-observation-trace	pair-name-only	The mirror test cannot be checked.
extra	no-extra-rule	free-enantiomer-rule	A discretionary label can force the pair.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt `sha256:78874adb9051f2cda593f82c2378adc94592159d0fce0287299f8bc1501a94dc`.

Generated grammar. Generate the literal product of the eight registered binary coordinates; decide every form by complete carrier preservation, exact equivalence enumeration, minimality and absence of an extra rule.

Boundary: Every finite molecular carrier with complete named substructures, boundary bonds and generated source-bound reaction traces.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `named-atom-or-group-support__molecular-embedding-held__recurs-across-molecules__characteristic-reaction-role__group-identity-retained__molecular-context-bounded__substructure-and-reaction-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
support	named-atom-or-group-support	whole-molecule-only	No recurrent substructure is identified.
embedding	molecular-embedding-held	isolated-fragment	A functional group acts in a molecule.
recurrence	recurs-across-molecules	one-molecule-only	No group class is established.
reaction	characteristic-reaction-role	shape-without-transition-role	Function requires chemical behavior.
identity	group-identity-retained	context-erases-group	The group cannot be followed.
context	molecular-context-bounded	universal-context-free-response	Neighboring structure can modify response.
record	substructure-and-reaction-trace	group-name-only	Recurrence cannot be reproduced.
extra	no-extra-rule	free-functional-taxonomy	An imported list selects the group.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt `sha256:c188cf693c44cb41b1a98a4cac9a337f8c0045f92bc18d237416427b14b2f689`.

Generated grammar. Generate the literal product of the eight registered binary coordinates; decide every form by complete carrier preservation, exact equivalence enumeration, minimality and absence of an extra rule.

Boundary: Every finite observed polymer sample with complete chain identities, repeat counts, positive multiplicities, weighting rule, sample and method boundary.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `all-observed-chain-carriers__exact-chain-length-counts__positive-chain-multiplicities__number-and-mass-support-separated__complete-molar-mass-distribution__method-and-sample-bounded__chain-population-on-trace__no-extra-rule`. Closure is `depth-independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
population	all-observed-chain-carriers	single-representative-chain	A sample distribution is erased.
length	exact-chain-length-counts	mean-only	A mean loses alternatives.
multiplicity	positive-chain-multiplicities	duplicate-chains-collapse	Population frequency is lost.
measure	number-and-mass-support-separated	one-universal-average	Different summaries retain different information.
distribution	complete-molar-mass-distribution	answer-scalar-only	The population cannot be reconstructed.
method	method-and-sample-bounded	method-free-census	Resolution changes the observed population.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
record	chain-population-trace	distribution-name-only	The census cannot be audited.
extra	no-extra-rule	free-distribution-fit	A fitted shape can hide unfavorable chains.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

Generated grammar. Generate the literal product of the eight registered binary coordinates; decide every form by complete distinction preservation, exact recurrence/equivalence enumeration, minimality and absence of an extra rule.

Boundary: Every finite registered reference-response set and sample response sharing one declared observation organization.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `traceable-reference-input__reference-response-pair-held__exact-generated-comparison-order__sample-compared-with-reference-map__declared-calibration-domain__reference-and-sample-uncertainty-held__reference-map-and-result-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
reference	traceable-reference-input	unknown-reference-input	Comparison has no fixed support.
response	reference-response-pair-held	reference-response-erased	The comparison cannot be reconstructed.
ordering	exact-generated-comparison-order	unordered-fit	A fit can conceal incompatible rows.
sample	sample-compared-with-reference-map	sample-outside-reference-map	No calibrated comparison is possible.
range	declared-calibration-domain	universal-unbounded-map	Calibration support is finite and method-bound.
uncertainty	reference-and-sample-uncertainty-held	uncertainty-erased	Alternatives are falsely collapsed.
record	reference-map-and-result-trace	calibrated-answer-only	Traceability is lost.
extra	no-extra-rule	free-calibration-parameter	A fitted value can select the answer.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

Generated grammar. Generate the literal product of the eight registered binary coordinates; decide every form by complete distinction preservation, exact recurrence/equivalence enumeration, minimality and absence of an extra rule.

Boundary: Every finite generated ionized-carrier support with complete composition, isotope, mass/charge, response and precursor-fragment records.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `generated-ionized-carriers__composition-and-isotope-support-held__mass-charge-classes-held__class-position-and-abundance-held__precursor-fragment-map-held__ionization-and-instrument-boundary__complete-carrier-response-trace__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	generated-ionized-carriers	neutral-sample-label-only	No detected carrier class is generated.
identity	composition-and-isotope-support-held	carrier-composition-erased	Composition correspondence is impossible.
partition	mass-charge-classes-held	undifferentiated-response	Distinct carrier classes merge.
response	class-position-and-abundance-held	peak-position-only	Multiplicity support is lost.
fragments	precursor-fragment-map-held	fragment-origin-erased	Products cannot be related to precursors.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
conditions	ionization-and-instrument-boundary	universal-spectrum	Carrier production is method-bound.
record	complete-carrier-response-trace	spectrum-image-only	The composition map cannot be checked.
extra	no-extra-rule	free-peak-assignment	A library guess can select composition.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

Generated grammar. Generate the literal product of the eight registered binary coordinates; decide every form by complete distinction preservation, exact recurrence/equivalence enumeration, minimality and absence of an extra rule.

Boundary: Every finite molecular geometry with generated rotational and vibrational recurrence classes, paired transitions and declared observation support.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-molecular-geometry-held__rotational-state-classes-held__vibrational-state-classes-held__rotational-vibrational-composition__allowed-state-transition-trace__complete-transition-frequency-pattern__state-method-condition-boundary__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-molecular-geometry-held	point-label-only	Internal molecular motion is absent.
rotation	rotational-state-classes-held	orientation-history-erased	Rotational recurrence cannot be distinguished.
vibration	vibrational-state-classes-held	relative-displacement-erased	Vibrational recurrence cannot be distinguished.
composition	rotational-vibrational-composition	motions-collapsed-together	Joint spectral structure is lost.
transition	allowed-state-transition-trace	states-without-transition-map	No spectral event is generated.
spectrum	complete-transition-frequency-pattern	one-frequency-only	Resolved organization is erased.
conditions	state-method-condition-boundary	universal-spectrum	Population and resolution are bounded.
extra	no-extra-rule	free-rotor-oscillator-equation	An imported model can select the spectrum.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt `sha256:4323d8285eafe3506586879204c1788f573d36d9a713b75d9b52ab8745e41bfa`.

17. g-block, Smithium and the periodic endpoint - 11 admitted claims

Known periodic support, exact structural extrapolation and standing unobserved prediction are separate evidence classes. This entire registered subcategory is included; no proper subset is presented as field completion.

84. Generated g-block structural prediction

Claim identity: SFT-CHEM-PRED-G-BLOCK-001

Question and theorem. The admitted Fold orbit capacities ordered by increasing joint principal/orbit cover, with principal rank breaking a cover tie, generate noble closures 2, 10, 18, 36, 54, 86 and 118; fill 8s at 119-120; and open the 5g block at 121. The known prefix is externally checked and the g-block placement remains a sealed unobserved prediction.

The exact walk has capacities 2,6,10,14,18; noble closures 2,10,18,36,54,86,118; 8s occupations at 119-120; and first 5g occupation at 121.

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-PHYS-ATOMIC-CELL-ORBIT-CAPACITY-001
- SFT-PHYS-ATOMIC-EXISTENCE-BOUNDARY-001
- SFT-PHYS-VALIDATION-INVERSE-FINE-STRUCTURE-001
- SFT-PHYS-QUANTUM-EXCLUSION-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-COMBINATORICS-001

- SFT-CHEM-ELEM-PERIODIC-ORDER-001
- SFT-CHEM-ELEM-PERIODIC-RECURRENCE-001
- SFT-CHEM-ELEM-PERIODIC-BOUNDARY-001

Generated grammar. Generate the complete eight-axis product of positive orbit carrier, capacity, joint-cover order, predicted coordinate, provenance, target custody, evidence status and extra-rule forms.

Boundary: All finite subshell walks built from the admitted positive-rank capacities, complete valid principal/orbit cells, increasing joint cover and source-rank tie order before the atomic endpoint.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `positive-principal-and-orbit-ranks__admitted-Fold-orbit-capacity__increasing-joint-cover-then-principal-rank__first-5g-occupation-at-121__complete-fill-and-dependency-trace__official-table-opened-after-seal__known-prefix-validated-future-coordinate-unobserved__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	positive-principal-and-orbit-ranks	borrowed-orbital-notation	A borrowed notation has no Fold support trace.
capacity	admitted-Fold-orbit-capacity	imported-subshell-widths	Imported widths would supply the answer.
order	increasing-joint-cover-then-principal-rank	memorized-aufbau-list	A memorized order is a target-bearing table.
coordinate	first-5g-occupation-at-121	selected-future-coordinate	A selected coordinate is not forced.
provenance	complete-fill-and-dependency-trace	answer-only-prediction	An answer-only prediction cannot be reproduced.
target	official-table-opened-after-seal	official-table-readable-before-seal	The known table could select the walk.
status	known-prefix-validated-future-coordinate-unobserved	future-prediction-called-measured	That conflates unobserved consequence with empirical confirmation.
extension	no-extra-rule	free-exception-or-fit	An exception can be tuned to a desired element.

Adverse controls. All mandatory controls passed:

85. Smithium element-126 standing prediction

Claim identity: SFT-CHEM-PRED-SMITHIUM-001

Question and theorem. The independently sealed nuclear recurrence places the next proton/neutron double closure at 126/184. The generated electronic walk gives element 126 the active configuration 8s2 5g6, mass coordinate 310, eight valence carriers and structurally admissible positive oxidation counts +2 through +8.

Smithium is the standing prediction $Z=126$, $N=184$, $A=310$ with active configuration 8s2 5g6, valence count 8 and predicted positive oxidation counts +2 through +8.

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-PHYS-ATOMIC-CELL-ORBIT-CAPACITY-001
- SFT-PHYS-ATOMIC-EXISTENCE-BOUNDARY-001
- SFT-PHYS-VALIDATION-INVERSE-FINE-STRUCTURE-001
- SFT-PHYS-QUANTUM-EXCLUSION-001

- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-CHEM-ELEM-ELEMENT-001

- SFT-PHYS-NUCLEAR-CLOSURE-SEQUENCE-001
- SFT-PHYS-VALIDATION-NUCLEAR-CLOSURES-001
- SFT-CHEM-PRED-G-BLOCK-001

Generated grammar. Generate the complete eight-axis product of positive orbit carrier, capacity, joint-cover order, nuclear/electronic coordinate, provenance, target custody, evidence status and extra-rule forms.

Boundary: All double-closure/electronic-fill consequences at the next generated proton closure after 82 using the admitted nuclear recurrence and complete subshell walk.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `positive-principal-and-orbit-ranks__admitted-Fold-orbit-capacity__sealed-joint-cover-fill-walk__next-double-closure-126-184-with-8s2-5g6__complete-fill-and-dependency-trace__official-table-opened-after-seal__known-prefix-validated-future-coordinate-unobserved__no-extra-rule`. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	positive-principal-and-orbit-ranks	borrowed-orbital-notation	A borrowed notation has no Fold support trace.
capacity	admitted-Fold-orbit-capacity	imported-subshell-widths	Imported widths would supply the answer.
order	sealed-joint-cover-fill-walk	memorized-aufbau-list	A memorized order is a target-bearing table.
coordinate	next-double-closure-126-184-with-8s2-5g6	selected-future-coordinate	A selected coordinate is not forced.
provenance	complete-fill-and-dependency-trace	answer-only-prediction	An answer-only prediction cannot be reproduced.
target	official-table-opened-after-seal	official-table-readable-before-seal	The known table could select the walk.
status	known-prefix-validated-future-coordinate-unobserved	future-prediction-called-measured	That conflates unobserved consequence with empirical confirmation.
extension	no-extra-rule	free-exception-or-fit	An exception can be tuned to a desired element.

Adverse controls. All mandatory controls passed:

86. Generated periodic endpoint standing prediction

Claim identity: SFT-CHEM-PRED-PERIODIC-ENDPOINT-001

Question and theorem. The independently sealed exact inverse fine-structure ratio and One binding ceiling admit positive whole atomic coordinate 137 and reject its successor 138. Chemistry therefore records 137 as the model's structural endpoint while the official observed table remains source-bounded through 118.

The model's exact structural periodic endpoint is positive atomic number 137; the IUPAC 2022 observed boundary remains 118, so 119-137 including the endpoint are unobserved standing predictions.

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-PHYS-ATOMIC-CELL-ORBIT-CAPACITY-001
- SFT-PHYS-ATOMIC-EXISTENCE-BOUNDARY-001
- SFT-PHYS-VALIDATION-INVERSE-FINE-STRUCTURE-001
- SFT-PHYS-QUANTUM-EXCLUSION-001

87. Complete Smithium synthesis-conservation grammar

Claim identity: SFT-CHEM-SMITHIUM-SYNTHESIS-CONSERVATION-001

Question and theorem. The complete conservation grammar contains exactly 22,875 labelled positive two-body entrance partitions. Every row sums to $Z=126$, $N=184$ and $A=310$. No partition is promoted to a feasible reaction, unique synthesis route, beam energy, cross-section or yield without additional sealed law and measurement.

The complete conservation grammar contains exactly 22,875 labelled positive two-body entrance partitions. Every row sums to $Z=126$, $N=184$ and $A=310$. No partition is promoted to a feasible reaction, unique synthesis route, beam energy, cross-section or yield without additional sealed law and measurement.

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-CHEM-PRED-SMITHIUM-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-COMBINATORICS-001
- SFT-PHYS-NUCLEAR-FUSION-001

Generated grammar. Generate the complete eight-axis Smithium synthesis product and every positive labelled two-body Z/N entrance partition.

Boundary: All positive labelled pairs $(Z_1, N_1), (Z_2, N_2)$ with $Z_1 + Z_2 = 126$ and $N_1 + N_2 = 184$, plus all 256 methodological forms.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: sealed-126-184-310-coordinate__complete-positive-carrier-ledger__all-22875-conserving-labelled-entrance-partitions__complete-declared-product__formal-seal-before-target-access__favourable-adverse-absent-unresolved-held__structural-absence-and-explicit-halt__no-extra-rule. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
coordinate	sealed-126-184-310-coordinate	selected-element-name	A selected name does not reconstruct a nuclear/electronic coordinate.
conservation	complete-positive-carrier-ledger	outcome-only-transformation	An outcome without the complete carrier ledger can hide loss or invention.
relation	all-22875-conserving-labelled-entrance-partitions	free-or-imported-relation	A free or imported relation is not forced by the dependencies.
enumeration	complete-declared-product	selected-favourable-example	One favourable example cannot establish uniqueness.
measurement	formal-seal-before-target-access	target-before-seal	Target access before the derivation seal is fitting.
record	favourable-adverse-absent-unresolved-held	favourable-only-record	Selective retention destroys empirical falsifiability.
absence	structural-absence-and-explicit-halt	invented-numerical-placeholder	A placeholder turns absence into a false number.
extension	no-extra-rule	free-extra-rule	An exception is an unforced parameter.

Adverse controls. All mandatory controls passed:

hash sha256 : 585e23b86246987038790ed2c5090964daabacee96b54140ed3504f7e12d81fc. The independent
program regenerates the declared product and sole survivor without importing the derivation implementation.

Post-seal external check. This is a sealed formal law with an implementation-distinct reconstruction and no separate external-observation package at this boundary. It receives no empirical-comparison credit that is not present in its claim package.

Registered source descriptions:

- None.

Registered target identities:

- None.

Meaning. The final subbranch applies separately admitted exact physical prerequisites to a complete positive-rank fill walk and distinguishes known-domain validation from unobserved prediction. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no apparatus, projectile, target, beam energy, cross-section or production yield selected as a law
- no lifetime, branching ratio, transition energy, wavelength or line intensity invented without measurement

- no current non-observation relabelled as disproof and no standing prediction relabelled as discovery
- no numerical absence used as a proof value; absence is a held structural record
- no negative, irrational, imaginary, floating, fitted, free or target-selected proof magnitude
- no V1/V2 answer used to select a survivor; prior work supplies only the reconstruction question

Immutable identities. Source manifest

88. Complete Smithium decay-channel coordinate ledger

Claim identity: SFT-CHEM-SMITHIUM-DECAY-CHANNEL-LEDGER-001

Question and theorem. Gamma retains (126,184,310); alpha yields daughter (124,182,306) plus (2,2,4); beta-minus yields (127,183,310); beta-plus or electron capture yields (125,185,310); and labelled fission exhausts the same 22,875 positive conservation partitions. No branch is asserted active and no branching ratio is invented.

Gamma retains (126,184,310); alpha yields daughter (124,182,306) plus (2,2,4); beta-minus yields (127,183,310); beta-plus or electron capture yields (125,185,310); and labelled fission exhausts the same 22,875 positive conservation partitions. No branch is asserted active and no branching ratio is invented.

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-CHEM-SMITHIUM-SYNTHESIS-CONSERVATION-001
- SFT-PHYS-NUCLEAR-RADIOACTIVE-DECAY-TERMINAL-005
- SFT-PHYS-NUCLEAR-FISSION-001
- SFT-CHEM-RADIOACTIVE-CHEMICAL-TRANSFORMATION-002

Generated grammar. Generate all 256 decay-ledger forms and the complete registered gamma, alpha, beta and labelled-fission coordinate classes.

Boundary: The sealed Smithium parent under gamma, alpha, beta-minus, beta-plus/electron-capture and every positive labelled two-fragment conservation partition.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: sealed-126-184-310-coordinate__complete-positive-carrier-ledger__complete-gamma-alpha-beta-and-labelled-fission-ledger__complete-declared-product__formal-seal-before-target-access__favourable-adverse-absent-unresolved-held__structural-absence-and-explicit-halt__no-extra-rule. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
coordinate	sealed-126-184-310-coordinate	selected-element-name	A selected name does not reconstruct a nuclear/electronic coordinate.
conservation	complete-positive-carrier-ledger	outcome-only-transformation	An outcome without the complete carrier ledger can hide loss or invention.
relation	complete-gamma-alpha-beta-and-labelled-fission-ledger	free-or-imported-relation	A free or imported relation is not forced by the dependencies.
enumeration	complete-declared-product	selected-favourable-example	One favourable example cannot establish uniqueness.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
measurement	formal-seal-before -target-access	target-before-seal	Target access before the derivation seal is fitting.
record	favourable-adverse -absent-unresolved -held	favourable-only-record	Selective retention destroys empirical falsifiability.
absence	structural-absence -and-explicit-halt	invented-numerical-placeholder	A placeholder turns absence into a false number.
extension	no-extra-rule	free-extra-rule	An exception is an unforced parameter.

Adverse controls. All mandatory controls passed:

89. Smithium lifetime identifiability and mandatory-halt boundary

Claim identity: SFT-CHEM-SMITHIUM-LIFETIME-BOUNDARY-001

Question and theorem. Smithium's 126/184 double closure forces a stability-relevant structural coordinate but not a numerical lifetime. Numerical evaluation must halt until a positive transition width and registered time unit are independently derived or measured. No half-life or branching value is claimed by V3 at this boundary.

Smithium's 126/184 double closure forces a stability-relevant structural coordinate but not a numerical lifetime. Numerical evaluation must halt until a positive transition width and registered time unit are independently derived or measured. No half-life or branching value is claimed by V3 at this boundary.

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-CHEM-SMITHIUM-DECAY-CHANNEL-LEDGER-001
- SFT-CHEM-ELEMENTARY-TRANSITION-RATE-001
- SFT-PHYS-ATOMIC-TRANSITION-RATE-TERMINAL-005

Generated grammar. Generate all 256 lifetime-identifiability forms from closure, channel, width, unit, record and target-custody alternatives.

Boundary: Every numerical-lifetime request using the sealed double closure and channel ledger, distinguished by presence or absence of a positive transition width and registered time unit.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: sealed-126-184-310-coordinate__complete-positive-carrier-ledger__numeric-lifetime-only-from-positive-width-and-unit__complete-declared-product__formal-seal-before-target-access__favourable-adverse-absent-unresolved-held__structural-absence-and-explicit-halt__no-extra-rule. 92. Complete Smithium chemical-state distinction and separation boundary

Claim identity: SFT-CHEM-SMITHIUM-CHEMICAL-SEPARATION-001

Question and theorem. The seven Smithium +2...+8 state identities generate exactly 21 unordered pairwise distinctions, each held with $Z=126$, $N=184$ and $A=310$. This closes the mathematical separation target grammar; it does not assert a separation medium, recovery, decontamination factor, efficiency or yield.

The seven Smithium +2...+8 state identities generate exactly 21 unordered pairwise distinctions, each held with $Z=126$, $N=184$ and $A=310$. This closes the mathematical separation target grammar; it does not assert a separation medium, recovery, decontamination factor, efficiency or yield.

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-CHEM-SMITHIUM-SPECTROSCOPIC-CLASSES-001
- SFT-CHEM-RADIOCHEMICAL-SEPARATION-DECONTAMINATION-010

Generated grammar. Generate all 256 separation forms and every unordered pair of the seven retained positive oxidation-state identities.

Boundary: All pairwise distinctions among Smithium's +2 through +8 structural states, conditioned on the sealed nuclear identity and without an apparatus model.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: sealed-126-184-310-coordinate__complete-positive-carrier-ledger__all-21-pairwise-oxidation-state-distinctions__complete-declared-product__formal-seal-before-target-access__favourable-adverse-absent-unresolved-held__structural-absence-and-explicit-halt__no-extra-rule. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
coordinate	sealed-126-184-310-coordinate	selected-element-name	A selected name does not reconstruct a nuclear/electronic coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
conservation	complete-positive-carrier-ledger	outcome-only-transformation	An outcome without the complete carrier ledger can hide loss or invention.
relation	all-21-pairwise-oxidation-state-distributions	free-or-imported-relation	A free or imported relation is not forced by the dependencies.
enumeration	complete-declared-product	selected-favourable-example	One favourable example cannot establish uniqueness.
measurement	formal-seal-before-target-access	target-before-seal	Target access before the derivation seal is fitting.
record	favourable-adverse-absent-unresolved-held	favourable-only-record	Selective retention destroys empirical falsifiability.
absence	structural-absence-and-explicit-halt	invented-numerical-placeholder	A placeholder turns absence into a false number.
extension	no-extra-rule	free-extra-rule	An exception is an unforced parameter.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the form missing the first structural preservation; observed reject the form missing the first structural preservation; receipt

93. Complete Smithium joint-identification protocol

Claim identity: SFT-CHEM-SMITHIUM-JOINT-DETECTION-001

Question and theorem. Complete SFT identification of Smithium requires the conjunction of (i) Z/N, (ii) A, (iii) genetically linked decay, (iv) ion/oxidation identity and (v) spectroscopic class, with source custody for every record. This is a deliberately stronger complete-project protocol, not a claim that IUPAC requires all five for priority recognition. Current status remains an unobserved standing prediction.

Complete SFT identification of Smithium requires the conjunction of (i) Z/N, (ii) A, (iii) genetically linked decay, (iv) ion/oxidation identity and (v) spectroscopic class, with source custody for every record. This is a deliberately stronger complete-project protocol, not a claim that IUPAC requires all five for priority recognition. Current status remains an unobserved standing prediction.

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-CHEM-SMITHIUM-CHEMICAL-SEPARATION-001
- SFT-CHEM-RADIOTRACER-CUSTODY-INFERENCE-009
- SFT-CHEM-MULTIMODAL-MOLECULAR-IDENTITY-021

Generated grammar. Generate all 256 identification forms and the complete five-record conjunction for the Smithium standing prediction.

Boundary: Every finite evidence record assembled from nuclear coordinate, mass, genetic decay, ion/oxidation and spectroscopic classes, with complete provenance and explicit official-scope separation.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: sealed-126-184-310-coordinate__complete-positive-carrier-ledger__five-record-complete-SFT-identification-conjunction__complete-declared-product__formal-seal-before-target-access__favourable-adverse-absent-unresolved-held__structural-absence-and-explicit-halt__no-extra-rule. 94. Complete post-seal Smithium external-status record

Claim identity: SFT-CHEM-VALIDATION-SMITHIUM-COMPLETE-FAMILY-001

Question and theorem. IUPAC's registered record places the current known element boundary at oganesson, $Z=118$; reports superheavy $Z \geq 104$ production by heavy-ion fusion and identification through implanted-residue decay chains with alpha decay and/or spontaneous fission; and NIST records one-electron $E1$ orbital change by one rank. These externally correspond to the frozen synthesis, decay and spectroscopy classes but do not observe Smithium, select a unique production route, or supply its lifetime, branch fractions or wavelengths. Smithium remains a precise standing prediction.

IUPAC's registered record places the current known element boundary at oganesson, $Z=118$; reports superheavy $Z \geq 104$ production by heavy-ion fusion and identification through implanted-residue decay chains with alpha decay and/or spontaneous fission; and NIST records one-electron $E1$ orbital change by one rank. These externally correspond to the frozen synthesis, decay and spectroscopy classes but do not observe Smithium, select a unique production route, or supply its lifetime, branch fractions or wavelengths. Smithium remains a precise standing prediction.

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-CHEM-SMITHIUM-JOINT-DETECTION-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-PHYS-MEAS-TARGET-CUSTODY-001
- SFT-PHYS-MEAS-UNCERTAINTY-001

Generated grammar. Generate all 256 complete-family comparison forms before opening the registered IUPAC and NIST snapshots.

Boundary: All seven formal Smithium successor receipts, the official current element boundary, superheavy production/identification practice, $E1$ orbital adjacency and favorable/adverse/absent/unresolved status classes.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: sealed-126-184-310-coordinate__complete-positive-carrier-ledger__sealed-seven-law-family-versus-complete-official-source-record__complete-declared-product__formal-seal-before-target-access__favourable-adverse-absent-unresolved-held__structural-absence-and-explicit-halt__no-extra-rule. - SFT-CHEM-BOND-CHEMICAL-BOND-001

Generated grammar. Generate the literal Cartesian product of carrier, occurrence, arrangement, admissibility, composition, distinction, record and extension choices; decide every product by preservation of admitted molecular, quantum, information and observation dependencies.

Boundary: Every exact positive-finite molecular carrier and its generated finite electron-occurrence support at a declared chemical observation resolution. The certificate is depth-independent because adding one electron occurrence repeats the same required occurrence, support, held-label and record checks.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `identified-molecular-carrier__electron-occurrences-retained__complete-joint-arrangement__admitted-quantum-constraints__molecular-composition-retained__observation-distinguishable-state__held-state-record__no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	identified-molecular-carrier	state-without-molecular-carrier	A free state label cannot identify which chemical whole carries it.
occurrences	electron-occurrences-retained	anonymous-electron-number	A number alone erases the separately retained electron occurrences.
arrangement	complete-joint-arrangement	energy-name-only	An energy or state name cannot reconstruct the electronic organization.
admissibility	admitted-quantum-constraints	arbitrary-electron-arrangement	An arbitrary arrangement can violate admitted spin, indistinguishability and exclusion laws.
composition	molecular-composition-retained	independent-electron-list	Independent labels omit the composed molecular state.
distinction	observation-distinguishable-state	state-name-without-observation	A name without a retained observation class supplies no state distinction.
record	held-state-record	electronic-result-without-trace	A result without carrier, occurrences and support cannot be reproduced.
extension	no-extra-rule	free-electronic-exception	A free exception can manufacture a desired state or target match.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt `sha256:d66cac9b49987f51c50d9e51790f2bfbdeb6882eadac40923519503e9dc9c6329`.

96. Exact nuclear-electronic, vibronic and rovibronic state composition

Claim identity: SFT-CHEM-ROVIBRONIC-COMPOSITION-001

Question and theorem. An exact molecular rovibronic state is the complete finite joint carrier of one admitted molecular electronic state, every retained nuclear occurrence and isotope label, positive vibrational and rotational recurrence coordinates, one held spin state and one declared observation record. The admitted electronic-over-vibrational-over-rotational hierarchy distinguishes the coordinates without importing a separation approximation; the H2/D2 isotope transport and resolved rotational/vibrational relations remain the exact measured consequence supplied by the admitted Physics dependency.

identified-molecular-state-carrier__nuclear-electronic-joint-support__admitted-electronic-vibrational-rotational-order__positive-odd-vibrational-recurrence__positive-counted-rotational-recurrence__held-spin-state__retained-rovibronic-observation__no-extra-rule

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-QUANTUM-STATE-COMPOSITION-001
- SFT-QUANTUM-MEASUREMENT-001
- SFT-PHYS-QUANTUM-SPIN-001
- SFT-PHYS-MOLECULAR-SPECTRUM-HIERARCHY-004
- SFT-PHYS-MOLECULAR-SPECTROSCOPY-TERMINAL-005
- SFT-CHEM-ELEM-ISOTOPE-001
- SFT-CHEM-MOL-MOLECULE-001
- SFT-CHEM-ELECTRONIC-STATE-IDENTITY-001

Generated grammar. Generate the literal eight-axis product of carrier, nuclear-electronic composition, scale order, vibrational recurrence, rotational recurrence, held spin, observation and extension forms; decide every form by preservation of the admitted dependency chain.

Boundary: Every positive-finite molecular electronic carrier with positive-finite retained nuclei, isotope labels, positive vibration and rotation ordinals, held spin and a declared finite observation resolution.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *identified-molecular-state-carrier__nuclear-electronic-joint-support__admitted-electronic-vibrational-rotational-order__positive-odd-vibrational-recurrence__positive-counted-rotational-recurrence__held-spin-state__retained-rovibronic-observation__no-extra-rule*. Closure is *depth_independent*; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	identified-molecular-state-carrier	detached-state-name	A detached name cannot identify the molecular whole carrying the state.
composition	nuclear-electronic-joint-support	nuclei-or-electrons-erased	Erasing either support merges distinguishable isotopologues or electronic states.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
scale	admitted-electronic-vibrational-rotational-order	imported-separation-approximation	An imported approximation cannot select a fundamental state organization.
vibration	positive-odd-vibrational-recurrence	continuum-vibrational-coordinate	A continuum coordinate is outside the exact generated grammar.
rotation	positive-counted-rotational-recurrence	signed-or-continuum-rotation	A signed continuum angle is not an exact proof carrier.
spin	held-spin-state	spin-erased-state	Erasing spin merges spectroscopically distinguishable molecular states.
observation	retained-rovibronic-observation	result-without-readout-record	A state without a readout boundary cannot be reproduced or distinguished.
extension	no-extra-rule	free-species-exception	A species exception can fit any desired spectrum.

Adverse controls. All mandatory controls passed:

97. Exact molecular electron count and held-spin organization

Claim identity: SFT-CHEM-ELECTRON-COUNT-SPIN-002

Question and theorem. For every positive finite molecular nuclear support, the complete electron occurrence count is forced by atomic-number occurrences and a held adjoin/remove transfer; every occurrence then has exactly one of two held spin fibres, same-fibre same-cell doubling is excluded, and the support decomposes uniquely at a declared spin width into complementary pairs plus unmatched held fibres.

atomic-number-occurrence-support__held-directed-electron-transfer__complete-electron-occurrence-census__two-held-spin-fibres__complementary-cell-occupation__complete-pairs-plus-held-surplus__support-compatible-spin-width__no-extra-rule

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-LOGIC-PROOF-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-QUANTUM-STATE-COMPOSITION-001
- SFT-PHYS-QUANTUM-SPIN-001
- SFT-PHYS-QUANTUM-INDISTINGUISHABILITY-001
- SFT-PHYS-QUANTUM-EXCLUSION-001
- SFT-CHEM-ELEM-ATOMIC-NUMBER-001
- SFT-CHEM-ELEM-ION-001
- SFT-CHEM-MOL-MOLECULE-001
- SFT-CHEM-ELECTRONIC-STATE-IDENTITY-001

Generated grammar. Generate the literal Cartesian product of nuclear support, charge representation, electron census, spin carrier, cell occupation, pair/surplus decomposition, observable width and extension choices. Decide every one of the 256 forms solely by preservation of admitted exact arithmetic, atomic-number, ion, spin, indistinguishability, exclusion, information and molecular-state laws.

Boundary: Every positive finite molecular multiset of admitted atomic-number occurrences, structural empty-One or a positive held electron-transfer count that leaves positive support, and every positive spin width. Closure is depth-independent: adjoining one nucleus, electron occurrence, complementary pair or unmatched fibre repeats the same local census, two-fibre, exclusion and complete-support checks.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *atomic-number-occurrence-support__held-directed-electron-transfer__complete-electron-occurrence-census__two-held-spin-fibres__complementary-cell-occupation__complete-pairs-plus-held-surplus__support-compatible-spin-width__no-extra-rule*. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
nuclear_support	atomic-number-occurrence-support	formula-name-only	A formula name does not enumerate the positive nuclear support that forces electron count.
charge	held-directed-electron-transfer	signed-charge-scalar	A signed scalar imports negative quantity and conflates direction with magnitude.
electron_count	complete-electron-occurrence-census	asserted-electron-number	An asserted number is neither generated nor reconstructible.
spin	two-held-spin-fibres	signed-spin-magnitude	A signed magnitude imports a forbidden negative coordinate and loses fibre identity.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
occupation	complementary-cell-occupation	same-fibre-cell-duplication	Doubled same-fibre occupation violates admitted indistinguishability and exclusion.
decomposition	complete-pairs-plus-held-surplus	unstructured-spin-list	An unstructured list cannot reconstruct pairs, surplus or width.
observation	support-compatible-spin-width	state-width-detached-from-support	A detached multiplicity can contradict the complete electron support.
extension	no-extra-rule	species-specific-exception	An exception or fitted table can select a measured state.

Adverse controls. All mandatory controls passed:

Falsification boundary: The claim fails if electron occurrence support differs from the complete atomic-number/held-transfer census; if a same-fibre duplicate occupies one cell; if complete support cannot be decomposed into complementary pairs and unmatched held fibres; if any NIST X-state multiplicity violates the sealed count/width parity; if any registered neutral, cation or anion row is omitted; or if a changed charge, state width, source byte, target row, prediction trace or adverse control is accepted.

Meaning. The field-wide extension derives molecular electronic identity, state composition, occupancy, ordering, symmetry, correlation, transitions, measurement and operational classical-quantum correspondence from the same exact carrier laws. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical-zero, negative, irrational, imaginary or floating proof value
- no signed charge or signed-spin proof coordinate
- no imported orbital occupation table, Hamiltonian, wavefunction or ground-state solver
- no measured state term or multiplicity in the derivation, candidate generator or prediction inputs
- no fitted, learned, species-specific or target-derived parameter
- no omitted, selected or silently corrected external row
- external state terms open only after the complete prediction vector is sealed

Immutable identities. Source manifest

98. Fold-native molecular support composition and fermionic occupancy

Claim identity: SFT-CHEM-ORBITAL-SUPPORT-OCCUPANCY-003

Question and theorem. A molecular electronic support cell is a molecule-bound composition of positive radial recurrence, structural empty-One or positive axis recurrence, one of two held joining phases and applicable held symmetry observations. Its fermionic occupancy is structural empty One, one held electron occurrence or one complementary-spin pair, and the complete occupied support partitions every molecular electron occurrence exactly once.

molecule-bound-support-cell__two-held-joining-phases__empty-One-or-positive-axis-recurrence__held-exchange-and-reflection-labels__empty-One-single-or-complementary-pair__complementary-spin-double-occupation__complete-electron-support-partition__no-extra-rule

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001

- SFT-INFO-CONSERVATION-LOSS-001
- SFT-QUANTUM-STATE-COMPOSITION-001
- SFT-PHYS-QUANTUM-SPIN-001
- SFT-PHYS-QUANTUM-INDISTINGUISHABILITY-001
- SFT-PHYS-QUANTUM-EXCLUSION-001
- SFT-CHEM-MOL-MOLECULE-001
- SFT-CHEM-BOND-CHEMICAL-BOND-001
- SFT-CHEM-ELECTRONIC-STATE-IDENTITY-001
- SFT-CHEM-ELECTRON-COUNT-SPIN-002

Generated grammar. Generate the literal Cartesian product of carrier, joining, axis organization, held symmetry, occupancy, spin, completeness and extension forms. Decide all 256 forms only by admitted molecular composition, exact recurrence, two-fibre, spin, indistinguishability, exclusion, electron-count and information-retention laws.

Boundary: Every positive finite molecular carrier; every positive radial recurrence; the structural axis-invariant boundary and every positive axis recurrence; both held joining phases; applicable held exchange/reflection labels; and every positive finite electron support. Closure is depth-independent because each newly generated cell and occurrence repeats the same coordinate-identity, occupancy, complementary-spin and complete-partition checks.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *molecule-bound-support-cell__two-held-joining-phases__empty-One-or-positive-axis-recurrence__held-exchange-and-reflection-labels__empty-One-single-or-complementary-pair__complementary-spin-double-occupation__complete-electron-support-partition__no-extra-rule*. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	molecule-bound-sup port-cell	free-orbital-name	A free orbital name is detached from the molecule and its derivation.
joining	two-held-joining-p hases	unjoined-atomic-support-l ist	An unjoined list cannot express the two generated molecular phase relations.
axis	empty-One-or-posit ive-axis-recurrenc e	continuum-angular-coordin ate	A continuum angular coordinate imports an ungenerated state space.
symmetry	held-exchange-and- reflection-labels	unsigned-erased-symmetry	Erasing exchange and reflection distinctions merges spectroscopically distinct support.
occupancy	empty-One-single-o r-complementary-pa ir	signed-or-unbounded-occup ation	Signed, numerical-zero or unbounded fermion occupation violates the exact domain and exclusion.
spin	complementary-spin -double-occupation	same-fibre-double-occupat ion	Same-fibre doubling has no distinct admissible preimage under exclusion.
completeness	complete-electron- support-partition	selected-support-fragment	A selected fragment cannot reconstruct the molecular electronic state or electron census.
extension	no-extra-rule	species-or-symbol-excepti on	A species lookup or conventional symbol exception lets the target select the law.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:e8ba89ba1a9577ddb6acd17ce87b95e5bd21a06dfb2a5b07e4813ddd3b72c2b8.
- **tampered_source:** passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256:b4b83c12637be6aed01942e75976359984db76d6efbfff22c8e032561993c8b4f.
- **tampered_artifact:** passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt
sha256:f6f323656d9d8931b839ad79f3531cd625174354f6b7edf605783e433a0494b3.
- **boundary:** passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt
sha256:6b3e314b412df590e768623c31d8725f7966bb589034cb295f470089819a649b.

Independent reconstruction. Implementation hash

Falsification boundary: The claim fails if a joined molecular support lacks one of the two phase fibres; if a required axis class cannot be represented by structural empty One or positive recurrence; if a spatial cell admits a third electron or same-spin pair; if complete occupied support loses or duplicates an electron occurrence; if any of the 360 registered NIST state rows or 362 term assignments leaves the generated axis-support grammar; if any of the 87 explicit spectroscopic configuration assignments leaves the occupancy grammar; if a measured state multiplicity violates the ELEC-002 electron-count parity law; or if any source, row or adverse control is altered.

Meaning. The field-wide extension derives molecular electronic identity, state composition, occupancy, ordering, symmetry, correlation, transitions, measurement and operational classical-quantum correspondence from the same exact carrier laws. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical-zero, negative, irrational, imaginary or floating proof value
- no continuum angular coordinate or imported molecular wavefunction
- no conventional sigma/pi/delta/phi symbol in candidate generation or survivor selection
- no imported molecular-orbital energy ordering or species configuration table
- no occupancy above one complementary spin pair in a spatial support cell
- no measured NIST state or configuration assignment before prediction seal
- no fitted, learned, species-specific or target-derived parameter
- no selected, omitted or silently normalized spectroscopic assignment row

Immutable identities. Source manifest

99. Exact finite ground and excited molecular-state ordering

Claim identity: SFT-CHEM-STATE-ENERGY-ORDER-004

Question and theorem. At one declared molecular composition and geometry, every finite distinguishable electronic-state support has exactly one structural least state and every excited state occupies one exact positive successor position; all distinct state pairs are comparable, every higher/lower separation remains a retained positive gap, and the complete state/support identity record is preserved.

one-molecule-state-support__state-and-support-identity__structural-empty-One-ground__positive-successor-excitation__complete-finite-total-order__retained-positive-order-gap__complete-state-order-record__no-extra-rule

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001

- SFT-CHEM-ORBITAL-SUPPORT-OCCUPANCY-003

Generated grammar. Generate the literal product of carrier, identity, least-state, excitation, order, gap, record and extension forms. Decide all 256 forms only by admitted exact order, distinguishability, discrete spectrum, electronic state, electron-count and molecular-support laws.

Boundary: Every positive finite set of distinguishable molecular electronic states at one declared composition and geometry. The least element is structural empty One and each remaining state is one positive successor. Closure is depth-independent because adjoining one distinguishable state forces exactly the next positive position and its comparisons with every retained predecessor.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `one-molecule-state-support__state-and-support-identity__structural-empty-One-ground__positive-successor-excitation__complete-finite-total-order__retained-positive-order-gap__complete-state-order-record__no-extra-rule`. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	one-molecule-state-support	cross-molecule-state-list	States from different carriers have no common declared molecular order.
identity	state-and-support-identity	energy-only-anonymous-row	An anonymous energy cannot preserve which electronic support carries it.
least	structural-empty-One-ground	numerical-zero-ground	Numerical zero imports a forbidden proof magnitude and does not establish structural leastness.
excitation	positive-successor-excitation	signed-energy-displacement	A signed displacement imports negative proof quantities.
order	complete-finite-total-order	partial-selected-comparison	Selected comparisons cannot establish a complete finite state order.
gap	retained-positive-order-gap	unretained-transition-gap	Erasing the positive separation loses transition and reconstruction information.
record	complete-state-order-record	ordered-labels-without-trace	A label list without support and observation trace cannot reproduce the order.
extension	no-extra-rule	species-energy-lookup-rule	A species lookup or measured energy in generation lets the target select the law.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

Falsification boundary: The claim fails if any declared finite molecular state support lacks one unique least state; if an excited state lacks a positive successor or retained positive gap; if any pair is incomparable or contradictory; if the source-designated X state is not the unique least orderable NIST state for any registered species; if any of the 284 excited-state values does not lie above its species ground record; if any of the 306 exact measured energy inscriptions, uncertainty-status labels or source identities is omitted; or if a tied ground, negative gap, omitted row, unit-confounded row or tampered source is accepted.

Meaning. The field-wide extension derives molecular electronic identity, state composition, occupancy, ordering, symmetry, correlation, transitions, measurement and operational classical-quantum correspondence from the same exact carrier laws. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical-zero, negative, irrational, imaginary or floating proof value
- no measured NIST energy or state label in candidate generation or survivor selection
- no imported Hamiltonian, wavefunction, molecular-orbital energy formula or fitted scale
- no selected state pair or omitted unfavorable state-energy row
- no species-specific ground-state lookup rule
- external decimal and source-zero inscriptions remain post-seal measurement records
- no fitted, learned or target-derived parameter

Immutable identities. Source manifest

100. Finite electronic-state equivalence, degeneracy and retained symmetry

Claim identity: SFT-CHEM-STATE-SYMMETRY-DEGENERACY-005

Question and theorem. At one molecular carrier, electronic states are equivalent exactly when their complete positive-spin, axis-support, inversion, reflection and component signatures agree. Axis-invariant support retains one orientation; every positive axis recurrence retains the complementary orientation pair; the finite equivalence class contains exactly the positive spin multiplicity times the positive orientation count, with every applicable symmetry distinction held and every absent distinction represented only by structural EmptyOne.

one-molecule-equivalence__complete-symmetry-signature__positive-spin-multiplicity__empty-One-or-positive-axis-rank__one-or-complementary-orientation-support__held-symmetry-label-composition__complete-positive-component-classes__no-extra-rule

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-CHEM-ORBITAL-SUPPORT-OCCUPANCY-003
- SFT-CHEM-STATE-ENERGY-ORDER-004

Generated grammar. Generate the literal product of carrier, identity, spin, axis, orientation, symmetry, class and extension forms. Decide all 256 forms solely by admitted exact equivalence, held-label, spin, exclusion, support and finite-order laws.

Boundary: Every positive finite molecular electronic-state support; every positive spin multiplicity; structural axis invariance and every positive axis recurrence; both held inversion/reflection fibres where applicable; and structural EmptyOne wherever a symmetry coordinate is absent. Closure is depth-independent because each added component, multiplicity successor or axis recurrence repeats the same exact signature and complete-component checks.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *one-molecule-equivalence__complete-symmetry-signature__positive-spin-multiplicity__empty-One-or-positive-axis-rank__one-or-complementary-orientation-support__held-symmetry-label-composition__complete-positive-component-class__no-extra-rule*. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	one-molecule-equivalence	cross-carrier-equivalence	States on different molecules cannot share one declared chemical equivalence class.
identity	complete-symmetry-signature	energy-only-equivalence	Equal or nearby energy alone erases support and symmetry distinctions.
spin	positive-spin-multiplicity	unsigned-or-absent-multiplicity	Erasing positive spin width loses generated component support.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
axis	empty-One-or-positive-axis-rank	continuum-or-zero-projection	A continuum coordinate or numerical zero violates the generated axis grammar.
orientation	one-or-complementary-orientation-support	free-degeneracy-number	An asserted degeneracy count is an unforced parameter.
symmetry	held-symmetry-label-composition	erased-sign-labels	Erasing inversion, reflection and component labels merges distinguishable terms.
class	complete-positive-component-class	unbounded-anonymous-members	Anonymous or unbounded members cannot certify degeneracy.
extension	no-extra-rule	term-table-exception	A species or term lookup lets source assignments select the law.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:edcfc53a893102c7e786b91b214350befe8a5d2dac498d508024bfb407912070.
- **tampered_source:** passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256:77bd3b1ab3efdefe6e62a8f83bc941d433b55cb3dab25cf59be8342f870dbbe6.
- **tampered_artifact:** passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt
sha256:ed2e1d44ee0458e12b7bf4a0a151ce64eae3eb0e1d25011c3344ea944fda6b24.
- **boundary:** passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt
sha256:904ffe3d6ddc370e3ad5f88265da1864d73d752766a1a12538effa22fe404d21.

Independent reconstruction. Implementation hash

sha256:208c3f64d75f44b4c25af0f7231115c899c3584edaaa422203549cb6c8bd5a1c; independent certificate sha256:2eee45796f701101b275bdd03ce9f2aace6daba31d4ddd608b5ce7e2d5a690cf; external-validation hash sha256:5d73a8e0c08758f6993adec96eec5f9ccaba7f34034768581b7cf094fee8beb6. The independent program regenerates the declared product and sole survivor without importing the derivation implementation.

Post-seal external check. Target content was opened only after the matching prediction seal: True. All registered rows were preserved: True. The capability-isolation and custody certificates passed. External source identities:

Falsification boundary: The claim fails if equivalence merges different carriers or retained symmetry signatures; if axis-invariant support has more than one orientation; if a positive axis recurrence lacks the complementary pair; if the component census differs from positive spin multiplicity times positive orientation count; if any source absence glyph is treated as a number rather than EmptyOne; if any of 362 NIST term assignments, 170 inversion labels, 167 reflection labels, 32 positive axis-component labels, 330 absent axis-component coordinates, 11 source component-absence glyphs or their exact state inscriptions is omitted or mismatched; or if a changed label, free degeneracy, incomplete class, omitted row or tampered source is accepted.

Meaning. The field-wide extension derives molecular electronic identity, state composition, occupancy, ordering, symmetry, correlation, transitions, measurement and operational classical-quantum correspondence from the same exact carrier laws. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; glyph 0 is source/interface notation for absence only
- no negative, irrational, imaginary, floating or continuum proof value
- no imported point group, character table or conventional degeneracy formula in candidate generation
- no measured NIST term or symmetry label before prediction seal
- no asserted free degeneracy count or species exception
- no omitted or normalized-away term assignment
- source component glyph 0 normalizes only to structural EmptyOne

Immutable identities. Source manifest

101. Molecular exclusion and complementary electron-pair exchange organization

Claim identity: SFT-CHEM-MOLECULAR-EXCLUSION-EXCHANGE-006

Question and theorem. For every identical two-electron molecular pair, the total exchange word is alternating. The complete two-label spin census forces a positive One-width alternating spin sector with preserving spatial support and a positive three-width preserving spin sector with alternating spatial support. Same-cell pairing is admitted only in the preserving spatial sector; the complementary sectors remain distinct on the same orbital support. No signed, negative, imaginary, continuum or numerical-zero proof value is used.

one-molecule-electron-pair__exchange-equivalent-constituents__alternating-total-word__complete-one-and-three-spin-sectors__complementary-spin-spatial-fibres__spatial-exchange-controlled-occupation__complete-state-and-exchange-pair-record__pairwise-successor-with-no-extra-rule

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

Generated grammar. Generate the literal product of carrier, constituent identity, total exchange, spin sector, complementary composition, same-cell support, complete record and extension forms. Decide all 256 forms solely by the admitted Fold indistinguishability, exclusion, spin-census, orbital-support and state-symmetry laws.

Boundary: Every molecular carrier containing an identical electron pair; both complete two-label spin-composition sectors; every retained spatial support and pairwise successor in a larger molecule. External closure uses the complete 46-state NIST molecular-hydrogen term census, both explicit same-cell pair records and all 14 same-configuration singlet/triplet observation pairs.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *one-molecule-electron-pair__exchange-equivalent-constituents__alternating-total-word__complete-one-and-three-spin-sectors__complementary-spin-spatial-fibres__spatial-exchange-controlled-occupation__complete-state-and-exchange-pair-record__pairwise-successor-with-no-extra-rule*. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	one-molecule-electron-pair	cross-molecule-pair	A cross-molecule word does not define one molecular exchange organization.
identity	exchange-equivalent-constituents	named-distinguishable-electrons	Naming identical electrons imports a distinction absent from every observable exchange trace.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
total	alternating-total-word	free-total-exchange-label	A freely chosen total exchange class violates the admitted identical-fermion law.
spin	complete-one-and-three-spin-sectors	imported-spin-sign-function	A signed or continuum wavefunction is outside the exact Fold proof domain.
composition	complementary-spin-spatial-fibres	independent-spin-and-space-labels	Independent labels can compose to a preserving total word and violate fermionic exchange.
same_cell	spatial-exchange-controlled-occupation	selected-occupancy-cap	A selected cap is a free rule rather than an exclusion consequence.
record	complete-state-and-exchange-pair-record	selected-favourable-spin-states	Selected states cannot establish the complete molecular pair organization.
extension	pairwise-successor-with-no-extra-rule	species-or-energy-order-exception	A species lookup or fixed energy-order sign would add a target-selected rule.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

Falsification boundary: The claim fails if a molecular electron pair is not exchange-equivalent; if its total exchange is not alternating; if a positive One-width spin sector is not paired with preserving spatial exchange; if a positive three-width spin sector is not paired with alternating spatial exchange; if a same-cell pair is accepted in the alternating spatial sector; if any of 46 NIST H2 states, 25 singlets, 21 triplets, two explicit same-cell singlet records, 14 same-configuration exchange pairs, 13 triplet-below-singlet records or the one retained opposite-order record is omitted or altered; if any positive measured separation is replaced by a fitted value; or if source glyph 0 is treated as a number rather than absence.

Meaning. The field-wide extension derives molecular electronic identity, state composition, occupancy, ordering, symmetry, correlation, transitions, measurement and operational classical-quantum correspondence from the same exact carrier laws. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; glyph 0 denotes source/interface absence only
- no negative, irrational, imaginary, floating, signed-wavefunction or continuum proof magnitude
- no imported Pauli sign rule, antisymmetrized orbital equation, exchange integral or Hund ordering premise
- no measured NIST multiplicity, occupancy, energy order or separation before prediction seal
- no asserted energy-order sign or fitted exchange splitting
- no named-electron distinction, species exception, selected state or omitted unfavorable pair
- source energy inscription 0 remains an absence-baseline record and never becomes an SFT number

102. Nonfactorizable molecular joint support and dissociation correspondence

Claim identity: SFT-CHEM-JOINT-CORRELATION-DISSOCIATION-007

Question and theorem. Electron correlation is the retained exact joint-support distinction not reconstructible from independent one-carrier marginals. At a two-centre dissociation boundary, the complete indistinguishable-pair support contains both complementary cross-centre assignments, excludes both same-centre Cartesian words, and retains the bound carrier, separated product identities and transition trace. No fitted correction coefficient, signed amplitude, numerical zero or imported correlation functional enters the law.

bound-carrier-and-product-support__complete-complementary-joint-support__nonfactorizable-held-joint-relation__held-fibre-exchange-pair__bound-to-separated-support-transition__positive-post-seal-separation-record__complete-measurement-and-provenance-vector__pairwise-successor-with-no-extra-rule

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001

- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-QUANTUM-ENTANGLEMENT-001
- SFT-PHYS-QUANTUM-EXCLUSION-001
- SFT-CHEM-ORBITAL-SUPPORT-OCCUPANCY-003
- SFT-CHEM-STATE-ENERGY-ORDER-004
- SFT-CHEM-STATE-SYMMETRY-DEGENERACY-005
- SFT-CHEM-MOLECULAR-EXCLUSION-EXCHANGE-006

Generated grammar. Generate the literal product of carrier, support, relation, exchange, transition, energy, record and extension forms. Decide all 256 forms solely by admitted indistinguishability, exclusion, joint-state, molecular-support, state-order and exchange laws.

Boundary: Every identical molecular electron pair at a two-centre separated-product boundary and every pairwise successor in a larger finite support graph. External closure uses all nine pre-registered APS and NIST hydrogen/deuterium neutral, ionic, ground-state, excited-state and threshold dissociation records.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *bound-carrier-and-product-support__complete-complementary-joint-support__nonfactorizable-held-joint-relation__held-fibre-exchange-pair__bound-to-separated-support-transition__positive-post-seal-separation-record__complete-measurement-and-provenance-vector__pairwise-successor-with-no-extra-rule*. Closure is *depth_independent*; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	bound-carrier-and-product-support	unbound-energy-only-record	An energy alone erases the bound carrier and separated product identities.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
support	complete-complementary-joint-support	independent-single-product-word	One product word omits the complementary assignment required by indistinguishability and exchange.
relation	nonfactorizable-held-joint-relation	marginals-declared-complete	The two one-carrier marginals generate four Cartesian words and cannot identify the exact two-word joint support.
exchange	held-fibre-exchange-pair	named-electron-product-assignment	Named electrons import an unobservable constituent distinction.
transition	bound-to-separated-support-transition	dissociation-as-disconnected-lookup	A lookup does not preserve the molecular-to-product transition trace.
energy	positive-post-seal-separation-record	fitted-correlation-correction	A correction coefficient selected from dissociation data is a forbidden free parameter.
record	complete-measurement-and-provenance-vector	selected-single-isotopologue	Selecting one favourable molecule cannot test the complete registered dissociation vector.
extension	pairwise-successor-with-no-extra-rule	species-specific-correlation-rule	A species exception or imported correlation functional adds an unforced model.

Adverse controls. All mandatory controls passed:

103. Connected multicentre and delocalized molecular support

Claim identity: SFT-CHEM-MULTICENTRE-DELOCALIZED-SUPPORT-008

Question and theorem. A delocalized molecular electron support is one retained Fold word spanning every centre of a connected generated graph. At three or more centres it is not reducible to one localized two-centre support without losing the complete support identity. Path, cycle and polyhedral incidence force ribbon, surface and volume forms without an imported bonding model.

*complete-molecular-carrier__three-or-more-generated-centres__one-complete-extended-support__connected-generate
 d-graph__ribbon-surface-volume-census__multicentre-irreducible-support__complete-authority-and-geometry-vector__
 _connected-successor-with-no-extra-rule*

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-PHYS-QUANTUM-ENTANGLEMENT-001
- SFT-PHYS-QUANTUM-EXCLUSION-001
- SFT-CHEM-ORBITAL-SUPPORT-OCCUPANCY-003
- SFT-CHEM-MOLECULAR-EXCLUSION-EXCHANGE-006
- SFT-CHEM-JOINT-CORRELATION-DISSOCIATION-007

Generated grammar. Generate the literal product of molecular carrier, centre count, electron support, connection, topology, reduction, external record and extension forms. Decide all 256 forms solely by admitted Fold graph, joint-support, exchange and exclusion laws.

Boundary: Every positive finite connected molecular support containing at least three retained centres, with post-seal testing against all four IUPAC delocalization records, all nine NIST neutral-diborane geometry/bond-count records and all seven NIST benzene geometry/bond-count records.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-molecular-carrier__three-or-more-generated-centres__one-complete-extended-support__connected-generated-graph__ribbon-surface-volume-census__multicentre-irreducible-support__complete-authority-and-geometry-vector__connected-successor-with-no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-molecular-carrier	isolated-bond-list	A list erases the single molecular carrier joining the support.
centres	three-or-more-generated-centres	two-centre-only-premise	A two-centre restriction excludes generated supports before enumeration.
support	one-complete-extended-support	localized-edge-identities	Separate edge identities cannot preserve one electron-support identity spanning the graph.
connection	connected-generated-graph	disconnected-centre-union	A disconnected union is not one molecular support.
topology	ribbon-surface-volume-census	imported-or-single-topology	Selecting one familiar shape omits lawful connected alternatives.
reduction	multicentre-irreducible-support	pairwise-model-declared-complete	Independent localized pairs erase the one support identity extending beyond either endpoint.
record	complete-authority-and-geometry-vector	selected-example-only	One favourable example cannot test the registered topology and geometry surface.
extension	connected-successor-with-no-extra-rule	species-specific-extra-rule	A species exception or empirical bonding model adds an unforced premise.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
`sha256:0303169402091a84f1524aad24ca3dfe9b62545b190cff6ca13937ed795d7bf0`.

Falsification boundary: The claim fails if the complete support is disconnected; if fewer than three centres are relabelled multicentre; if a one-pair support retains the same complete identity as a support spanning three or more centres; if path, cycle or polyhedral incidence requires an imported chemical model; if the measured B-H-B bridge or equal six-link benzene cycle is absent; if any of four IUPAC, nine diborane or seven benzene registered rows is omitted or changed; or if an absence glyph is treated as an SFT number.

Meaning. The field-wide extension derives molecular electronic identity, state composition, occupancy, ordering, symmetry, correlation, transitions, measurement and operational classical-quantum correspondence from the same exact carrier laws. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; glyph 0 denotes source/interface absence only
- no negative, irrational, imaginary, floating, signed-amplitude or continuum proof magnitude
- no imported valence-bond, molecular-orbital, aromaticity, resonance, Wade, Hückel or two-centre bonding model
- no measured NIST geometry, IUPAC example or species name before prediction seal
- no fitted bond length, angle, order, topology or species correction
- no selected-source or selected-row validation

104. Exact molecular-state transformation and transition law

Claim identity: SFT-CHEM-MOLECULAR-STATE-TRANSITION-009

Question and theorem. A molecular-state transformation retains one carrier, distinct state endpoints, a held orientation or coupling class, and its exact observation trace. Matching endpoints compose into finite transition paths. An absent transition coordinate is structural EmptyOne, not numerical zero. Selection criteria are not imported before their separate derivation.

retained-molecular-carrier__distinct-initial-and-terminal-states__held-forward-reverse-bidirectional-or-coupled__closed-terminal-EmptyOne__complete-state-transition-trace__matching-endpoint-composition__complete-presence-coupling-absence-vector__finite-path-successor-with-no-extra-rule

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-COMP-FORM-STATE-TRANSITION-001
- SFT-QUANTUM-MEASUREMENT-001
- SFT-CHEM-STATE-ENERGY-ORDER-004
- SFT-CHEM-STATE-SYMMETRY-DEGENERACY-005
- SFT-CHEM-MULTICENTRE-DELOCALIZED-SUPPORT-008

Generated grammar. Generate the literal product of carrier, endpoints, orientation, absence, trace, composition, record and extension forms. Decide all 256 forms only from admitted state-transition, observation, molecular-state and exact-composition laws.

Boundary: Every positive finite molecular-state transition record and every matching finite path successor, externally tested against all 46 NIST H2 primary state rows and all 14 continuation transition rows.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *retained-molecular-carrier__distinct-initial-and-terminal-states__held-forward-reverse-bidirectional-or-coupled__closed-terminal-EmptyOne__complete-state-transition-trace__matching-endpoint-composition__complete-presence-coupling-absence-vector__finite-path-successor-with-no-extra-rule*. Closure is *depth_independent*; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	retained-molecular-carrier	transition-label-alone	A label alone erases the transforming molecular carrier.
endpoints	distinct-initial-and-terminal-states	unbound-final-answer	An answer without endpoints cannot identify a state transformation.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
orientation	held-forward-reverse-bidirectional-or-coupled	signed-or-unoriented-change	A sign or erased orientation loses the observed direction class.
absence	closed-terminal-EmptyOne	absence-treated-as-number	Numerical absence violates the Fold domain.
trace	complete-state-transition-trace	endpoint-only-lookup	Endpoints alone erase the transition record and provenance.
composition	matching-endpoint-composition	nonmatching-path-concatenation	Transitions with unequal adjacent endpoints cannot form one path.
record	complete-presence-coupling-absence-vector	selected-present-transition	Selecting only observed rows cannot test absence or coupling records.
extension	finite-path-successor-with-no-extra-rule	species-selection-rule-premise	A selection rule at this stage imports the next obligation.

Adverse controls. All mandatory controls passed:

Meaning. The field-wide extension derives molecular electronic identity, state composition, occupancy, ordering, symmetry, correlation, transitions, measurement and operational classical-quantum correspondence from the same exact carrier laws. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; glyph 0 denotes source/interface absence only
- no negative, irrational, imaginary, floating, signed-amplitude or continuum proof magnitude
- no imported dipole, spin, parity, angular-momentum or spectroscopic selection rule
- no NIST state, transition, band or absence outcome before prediction seal
- no selected present-only row surface
- no species-specific exception

Immutable identities. Source manifest

105. Exact chemical observation-class and selection-rule structure

Claim identity: SFT-CHEM-SELECTION-RULE-STRUCTURE-010

Question and theorem. A direct molecular observation retains spin-support multiplicity, changes a known inversion fibre, and changes axis support by no more than one generated recurrence. An observed relation outside that direct class requires a retained mediator or alternate observation channel; it does not erase the rule. Couplings, unresolved endpoints and channel absences remain separate exact classes, and absence is structural EmptyOne rather than numerical zero.

*retained-endpoint-signatures__declared-observation-class__direct-multiplicity-retention__known-inversion-fibre-chan
 ge__same-or-neighbour-axis-support__non-direct-requires-retained-mediator__channel-closed-EmptyOne__complete-
 adverse-inclusive-vector*

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001

- SFT-QUANTUM-MEASUREMENT-001
- SFT-CHEM-STATE-SYMMETRY-DEGENERACY-005

• SFT-CHEM-MOLECULAR-STATE-TRANSITION-009

Generated grammar. Generate the literal product of endpoint, observation-class, multiplicity, inversion, axis, mediation, absence and complete-record forms. Decide all 256 forms only from admitted Fold observation, information-retention, state-symmetry and molecular-transition laws.

Boundary: Every positive finite Fold axis recurrence under one direct observation action, together with mediated finite compositions and the complete registered NIST H2 transition, coupling, absence and adverse-note surface.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `retained-endpoint-signatures__declared-observation-class__direct-multiplicity-retention__known-inversion-fibre-change__same-or-neighbour-axis-support__non-direct-requires-retained-mediator__channel-closed-EmptyOne__complete-adverse-inclusive-vector`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	retained-endpoint-signatures	answer-only-rule	A selection answer without state endpoints erases the chemical carrier.
observation	declared-observation-class	channel-independent-permission	One universal yes/no label erases which observation operation was applied.
multiplicity	direct-multiplicity-retention	untracked-spin-support	Changing a retained support count in one direct Fold action erases a distinction.
inversion	known-inversion-fibre-change	same-fibre-direct-image	When both inversion fibres are known, an unchanged fibre supplies no direct observation distinction.
axis	same-or-neighbour-axis-support	arbitrary-axis-jump	One observation action cannot cross more than one generated axis recurrence.
mediation	non-direct-requires-retained-mediator	exception-erases-law	Calling every observed exception direct destroys the closed distinction.
absence	channel-closed-EmptyOne	numerical-zero-or-universal-forbidden	An empty source cell is neither a number nor a universal prohibition.
record	complete-adverse-inclusive-vector	selected-success-only	Keeping only ordinary transitions hides couplings, absences and mediated cases.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt `sha256:47114ea62d0391a1b52d22c34af88baf89733999d9005f9bd5e02ef147f2ba55`.
- `tampered_source`: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt `sha256:6846bd783a74e3d329f9dd5e34281fd8329fc7f36cbd476d8171c7ecc9a87248`.
- `tampered_artifact`: passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt `sha256:102ce1511196b1969c4d8f48e548fbfb4687b96c33b5167ddfe1c109f28b3346`.
- `boundary`: passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt `sha256:8fe0407f6bf7dbc1728798cb7b0b004bc9c315276edfe0631529a0b28256f2eb`.

Independent reconstruction. Implementation hash

`sha256:dc0309dce401244048a5969231768e2b2e35f32b9282af6c8b6c4c826ff08369`; independent certificate `sha256:9e7fdded67513d9582eb1ea04f8ea478af649b4f5542d2f5e10caa78159c9439`; external-validation hash `sha256:f9a72e1b857e1a533341d6a6179bef6a7e3210545465f5c8b10ab4b99decfacf`. The independent program regenerates the declared product and sole survivor without importing the derivation implementation.

Post-seal external check. Target content was opened only after the matching prediction seal: **True**. All registered rows were preserved: **True**. The capability-isolation and custody certificates passed. External source identities:

Falsification boundary: The claim fails if a direct observation changes multiplicity, preserves a known g/u fibre, jumps more than one axis recurrence, or loses either endpoint; if an observed non-direct case is admitted without a retained mediation requirement; if channel absence is treated as numerical zero or universal nonexistence; or if any of 60 NIST transition rows, three adverse notes, 52 direct one-step records, two mediated two-step records, one unresolved endpoint, four couplings or one closed coordinate is omitted or changed.

Meaning. The field-wide extension derives molecular electronic identity, state composition, occupancy, ordering, symmetry, correlation, transitions, measurement and operational classical-quantum correspondence from the same exact carrier laws. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; glyph 0 denotes source/interface absence only
- no negative, irrational, imaginary, floating, signed-amplitude or continuum proof magnitude
- no imported spectroscopic selection-rule formula or probability threshold
- no NIST endpoint, transition, coupling, absence or adverse-note outcome before prediction seal
- no observed exception relabelled as an ordinary direct transition
- no selected success-only surface and no erased channel distinction

Immutable identities. Source manifest

106. Exact molecular configuration order, basin, barrier and path law

Claim identity: SFT-CHEM-CONFIGURATION-ORDER-PATH-011

Question and theorem. A molecular configuration surface is an exact generated configuration graph, not a continuum premise. Each node retains its carrier, coordinate, exact positive height above structural EmptyOne and record; complete neighbour order forces stable basins and barriers, connected adjacency forces reaction paths, and periodic recurrence identifies its terminal configuration with its initial class.

retained-molecular-carrier__generated-configuration-nodes__exact-positive-order-or-EmptyOne__local-minimum-by-complete-neighbours__local-barrier-by-complete-neighbours__connected-complete-configuration-path__exact-periodic-endpoint-identity__complete-favourable-and-adverse-vector

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-COMP-FORM-STATE-TRANSITION-001
- SFT-CHEM-MOLECULAR-STATE-TRANSITION-009
- SFT-CHEM-SELECTION-RULE-STRUCTURE-010

Generated grammar. Generate the literal product of carrier, configuration, order, stability, barrier, path, recurrence and record forms. Decide all 256 only from admitted exact order, graph, state-transition and molecular observation laws.

Boundary: Every positive finite generated configuration graph and periodic successor, tested against both complete 25-coordinate NIST experimental ethanol internal-rotation paths.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `retained-molecular-carrier__generated-configuration-nodes__exact-positive-order-or-EmptyOne__local-minimum-by-complete-neighbours__local-barrier-by-complete-neighbours__connected-complete-configuration-path__exact-periodic-endpoint-identity__complete-favourable-and-adverse-vector`.

Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	retained-molecular-carrier	coordinate-only-surface	Coordinates without the molecular carrier do not identify one chemical configuration space.
configuration	generated-configuration-nodes	continuum-point-premise	A continuum potential coordinate imports an ungenerated domain.
order	exact-positive-order-or-EmptyOne	signed-or-floating-energy	Signed or floating magnitudes violate the exact Fold domain.
stability	local-minimum-by-complete-neighbours	named-stable-structure	A stability name alone does not decide neighbouring alternatives.
barrier	local-barrier-by-complete-neighbours	imported-saddle-formula	A continuum saddle formula is unnecessary and ungenerated.
path	connected-complete-configuration-path	endpoint-only-reaction	Endpoints erase intermediates and barriers.
recurrence	exact-periodic-endpoint-identity	open-curve-assumption	An internal rotation that erases closure duplicates rather than identifies its terminal configuration.
record	complete-favourable-and-adverse-vector	selected-minima-and-maxima	Keeping extrema alone hides the empirical path.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt `sha256:179b95273b3e79490c0ab7edbc4046a6c0906b3661b159bab0e653498bf859c4`.

Meaning. The field-wide extension derives molecular electronic identity, state composition, occupancy, ordering, symmetry, correlation, transitions, measurement and operational classical-quantum correspondence from the same exact carrier laws. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; source glyph 0 denotes absence only
- no negative, irrational, imaginary, floating, signed or continuum proof magnitude
- no imported potential-energy function, differential equation, saddle formula or fitted coefficient
- no NIST angle, energy, minimum, barrier or path outcome before prediction seal
- no selected extrema-only vector

Immutable identities. Source manifest

107. Exact nuclear-electronic joint composition and isotopologue scale-separation law

Claim identity: SFT-CHEM-NUCLEAR-ELECTRONIC-COMPOSITION-012

Question and theorem. A molecular isotopologue is one retained joint carrier whose nuclear occurrences and isotope labels compose with, but do not erase, its electronic support and state. Their distinct exact coordinate families force lawful scale separation without a continuum approximation or fitted separation parameter; equal-electronic-support isotopologues transport distinct exact vibronic records while every absence remains structural EmptyOne and every external signed inscription remains

held provenance.

retained-joint-molecular-carrier__retained-occurrence-and-isotope-support__retained-electronic-support-and-state__finite-nuclear-electronic-joint-product__exact-coordinate-partition-without-separation-parameter__exact-isotope-labelled-coordinate-transport__EmptyOne-or-held-external-inscription__complete-isotopologue-and-vibronic-record

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-QUANTUM-STATE-COMPOSITION-001
- SFT-PHYS-NUCLEAR-DEUTERON-DINUCLEON-TERMINAL-006
- SFT-CHEM-ELEM-ISOTOPE-001
- SFT-CHEM-ELECTRONIC-STATE-IDENTITY-001
- SFT-CHEM-ORBITAL-SUPPORT-OCCUPANCY-003
- SFT-CHEM-CONFIGURATION-ORDER-PATH-011

Generated grammar. Generate the literal product of carrier, nuclear, electronic, composition, scale, transport, absence and record forms. Decide all 256 only from admitted exact composition, isotope, electronic-state and configuration laws.

Boundary: Every positive finite nuclear occurrence word jointly composed with one admitted molecular electronic state; externally tested against every state and cell in the complete NIST H2, HD and D2 diatomic tables.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *retained-joint-molecular-carrier__retained-occurrence-and-isotope-support__retained-electronic-support-and-state__finite-nuclear-electronic-joint-product__exact-coordinate-partition-without-separation-parameter__exact-isotope-labelled-coordinate-transport__EmptyOne-or-held-external-inscription__complete-isotopologue-and-vibronic-record*. Closure is *depth_independent*; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	retained-joint-molecular-carrier	detached-nuclear-and-electronic-records	Detached records do not identify one molecular state.
nuclear	retained-occurrence-and-isotope-support	mass-number-without-occurrence-identity	A magnitude alone erases which nuclear occurrence carries an isotope.
electronic	retained-electronic-support-and-state	isotope-replacement-erases-electronic-identity	Erasing electronic identity prevents lawful equal-support comparison.
composition	finite-nuclear-electronic-joint-product	nuclear-or-electronic-factor-erased	Either erasure merges empirically distinguishable states.
scale	exact-coordinate-partition-without-separation-parameter	imported-continuum-separation	A continuum scale approximation is not generated by Fold structure.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
transport	exact-isotope-labeled-coordinate-transport	isotopologue-coordinates-declared-invariant	Invariant coordinates erase observed isotope transport.
absence	EmptyOne-or-held-external-inscription	numerical-zero-or-signed-proof-value	Numerical zero and signed magnitudes are outside the SFT proof domain.
record	complete-isotopologue-and-vibronic-record	selected-common-state-highlights	A selected intersection hides unmatched and absent source rows.

Adverse controls. All mandatory controls passed:

Meaning. The field-wide extension derives molecular electronic identity, state composition, occupancy, ordering, symmetry, correlation, transitions, measurement and operational classical-quantum correspondence from the same exact carrier laws. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; source glyph 0 denotes structural EmptyOne only
- no negative, irrational, imaginary, floating, signed or continuum proof magnitude
- no Born-Oppenheimer, continuum potential, differential equation, fitted mass, fitted scale or isotope coefficient
- no NIST molecular weights, state cells or isotopologue outcomes before prediction seal
- no common-state-only or favorable-value-only subset

Immutable identities. Source manifest

108. Exact resolved vibronic, rovibronic and spin-state joint-composition law

Claim identity: SFT-CHEM-RESOLVED-ROVIBRONIC-SPIN-COMPOSITION-013

Question and theorem. A resolved molecular spectral state is one finite joint product retaining its isotopologue carrier, electronic designation, positive whole spin multiplicity, exact positive vibrational and rotational coordinates or structural EmptyOne, transition/band record and complete source record. No coordinate may be erased, recombined independently or replaced by a continuum premise.

retained-molecular-and-isotope-carrier__retained-electronic-state-designation__positive-vibrational-coordinate-or-EmptyOne__positive-rotational-coordinate-or-EmptyOne__retained-positive-spin-multiplicity__finite-vibronic-rovibronic-spin-product__retained-transition-and-band-record__complete-resolved-spectrum-surface

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-QUANTUM-STATE-COMPOSITION-001
- SFT-PHYS-MOLECULAR-SPECTROSCOPY-TERMINAL-005
- SFT-CHEM-ROVIBRONIC-COMPOSITION-001
- SFT-CHEM-MOLECULAR-STATE-TRANSITION-009
- SFT-CHEM-SELECTION-RULE-STRUCTURE-010
- SFT-CHEM-NUCLEAR-ELECTRONIC-COMPOSITION-012

Generated grammar. Generate the literal product of carrier, electronic, vibration, rotation, spin, composition, observation and record forms; decide all 256 only from admitted composition, transition, selection and exact spectroscopy dependencies.

Boundary: Every positive finite resolved molecular state word and every source absence, tested against all 95 state rows and all 1,235 cells in the complete NIST H2, HD and D2 diatomic surface.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *retained-molecular-and-isotope-carrier__retained-electronic-state-designation__positive-vibrational-coordinate-or-EmptyOne__positive-rotational-coordinate-or-EmptyOne__retained-positive-spin-multiplicity__finite-vibronic-rovibronic-spin-product__retained-transition-and-band-record__complete-resolved-spectrum-surface*. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	retained-molecular-and-isotope-carrier	detached-spectral-row	A row detached from its molecule is not a chemical state.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
electronic	retained-electronic-state-designation	transition-name-without-electronic-state	A transition name alone erases its endpoint state.
vibration	positive-vibrational-coordinate-or-EmptyOne	continuum-vibration-or-erasure	A continuum coordinate or erasure is not an exact generated state.
rotation	positive-rotational-coordinate-or-EmptyOne	signed-rotation-or-erasure	Signed continuum rotation or erasure loses resolved structure.
spin	retained-positive-spin-multiplicity	spin-erased-molecular-state	Erasing multiplicity merges singlet and triplet records.
composition	finite-vibronic-or-vibronic-spin-product	independent-coordinate-list	A list without joint identity permits unlawful recombination.
observation	retained-transition-and-band-record	endpoint-only-transition	Endpoints alone erase the measured transition record and unresolved boundary.
record	complete-resolved-spectrum-surface	selected-resolved-lines	Selected lines cannot establish complete resolved composition.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:e464604ff9553577bc5ec347ee2fa94fc553c78bd3f60ac5b3d6a840e6971088.
- **tampered_source:** passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256:64fc4c4f2ab8e9ee57efa728ec33787a883fa5da6e4ea6492762af4f62b9be01.
- **tampered_artifact:** passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt
sha256:3ad68c8f7a793ec21bd6d3f43da078b2a470e25972d95fbbab5ff66aa644c67.
- **boundary:** passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt
sha256:36f04628b4465f75564db07276f093890db3edc831a39ead2c245dae4b50371d.

Independent reconstruction. Implementation hash

sha256:0c2ddf9d78c3f7a3c1cd9aab7cd6fc4f2ed587bb18ce3decae7c0798cb27a203; independent certificate sha256:ced76690f303a3fdd8dcc7234607225289bb88803123d10fc04223fb189fe37; external-validation hash sha256:8c19418b949ce72df9ad7889724258b4815240e4916c140f65c45fe57bb60d63. The independent program regenerates the declared product and sole survivor without importing the derivation implementation.

Post-seal external check. Target content was opened only after the matching prediction seal: True. All registered rows were preserved: True. The capability-isolation and custody certificates passed. External source identities:

Meaning. The field-wide extension derives molecular electronic identity, state composition, occupancy, ordering, symmetry, correlation, transitions, measurement and operational classical-quantum correspondence from the same exact carrier laws. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; external zero is structural EmptyOne
- no negative, irrational, imaginary, floating, signed or continuum proof value
- no imported wavefunction, Hamiltonian, rigid rotor, harmonic oscillator, differential equation or fitted spectroscopic constant
- no NIST state, multiplicity, constant, transition or band outcome before prediction seal
- no singlet-only, triplet-only, common-state-only or resolved-value-only subset

Immutable identities. Source manifest

109. Exact chemical measurement-reduction law for molecular quantum states

Claim identity: SFT-CHEM-MOLECULAR-QUANTUM-MEASUREMENT-REDUCTION-014

Question and theorem. A molecular quantum-state observation is an exact process from one retained prepared state through one generated probe class to a retained finite readout and declared post-observation state. The record explicitly partitions retained from closed coordinates; only retained distinctions reconstruct, while every repetition, recovery, failed projection and boundary event remains evidence. No stochastic collapse or numerical probability is a premise.

retained-pre-observation-state__exact-generated-observation-class__explicit-retained-coordinate-set__explicit-closed-coordinate-set__retained-finite-readout-record__retained-post-observation-state__record-bounded-reconstruction__complete-repeat-and-adverse-record

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-DISCRETE-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-COMP-FORM-STATE-TRANSITION-001
- SFT-QUANTUM-MEASUREMENT-001
- SFT-CHEM-MOLECULAR-STATE-TRANSITION-009
- SFT-CHEM-RESOLVED-ROVIBRONIC-SPIN-COMPOSITION-013

Generated grammar. Generate the literal product of preparation, probe, retention, closure, record, poststate, reconstruction and replication forms; decide all 256 only from admitted observation, information-loss, state-transition and resolved molecular-state

laws.

Boundary: Every positive finite molecular preparation/readout sequence and its retained instrument/condition boundary, tested against the complete nine-file NIST MDS2-3389 CaH⁺ package containing 330 data rows and 796 cells.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `retained-pre-observation-state__exact-generated-observation-class__explicit-retained-coordinate-set__explicit-closed-coordinate-set__retained-finite-readout-record__retained-post-observation-state__record-bounded-reconstruction__complete-repeat-and-adverse-record`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
preparation	retained-pre-observation-state	outcome-without-prepared-state	An outcome alone cannot identify the state presented to the probe.
probe	exact-generated-observation-class	stochastic-collapse-premise	A stochastic collapse postulate imports an ungenerated law and numerical probability.
retention	explicit-retained-coordinate-set	all-or-nothing-observation	All-or-nothing readout hides which distinctions survive.
closure	explicit-closed-coordinate-set	silent-predecessor-erasure	Silent erasure makes later reconstruction claims untestable.
record	retained-finite-readout-record	unrecorded-measurement-result	A result without a retained record cannot be repeated or audited.
poststate	retained-post-observation-state	undefined-or-destroyed-poststate	An undefined post-state breaks process composition.
reconstruction	record-bounded-reconstruction	recover-unrecorded-predecessor	A merged predecessor cannot be recovered without a retained distinction.
replication	complete-repeat-and-adverse-record	selected-successful-readouts	Successful readouts alone erase failures and state changes.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256: 18ee5b35a1b4c672b08946df0f41efc2565a853eff8e47e62b46b3f2e0849725.
- `tampered_source`: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256: 53ad0d4bf427a81224ff7cd600e92e98d96f28a1c5725e41c578845e3d832740.
- `tampered_artifact`: passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt
sha256: 18e479acdeb56dfb54d19d5b1aa0eedf1c9b18b7ad1805fd271315bf4560b0df.
- `boundary`: passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt
sha256: 4b9d6a614e418bcc01be76879cb79a97397756555c55ab9a3b1c7e0da39d3d5.

Independent reconstruction. Implementation hash

sha256: f2d5e65b45846e89785751b48234fcd96f18e2dff13dbb20b12d9d538cd7b018; independent certificate sha256: cd76076e75d6309fda058427fdbb4915148e0e6e779e9d9e889f00754add1a85; external-validation hash sha256: ea176e4848f38c184b0af52fa4c4e9e69c6171269d268e7b177a0b73726c78f5. The independent program regenerates the declared product and sole survivor without importing the derivation implementation.

Post-seal external check. Target content was opened only after the matching prediction seal: `True`. All registered rows were preserved: `True`. The capability-isolation and custody certificates passed. External source identities:

- NIST-MDS2-3389-CAH-QUANTUM-STATE-TRACKING-CONTROL-V1.0.1

Falsification boundary: Reject if preparation, probe, retained/closed partition, readout, post-state, instrument or condition is erased; if an unrecorded predecessor is claimed reconstructible; if any of nine NIST package files, 330 data rows or 796 cells changes; if the complete event surface does not retain 50 real-time readouts, 117 J=2 intervals, 55 J=1 intervals, six prepared-sublevel rows, four recovery classes, 71 tracking intervals, four pressure-control rows and 23 appearance-time rows; if the one reported zero-duration tracking boundary is discarded or consumed as a number; if any target enters before sealing; or if a stochastic/fitted model selects the law.

Meaning. The field-wide extension derives molecular electronic identity, state composition, occupancy, ordering, symmetry, correlation, transitions, measurement and operational classical-quantum correspondence from the same exact carrier laws. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero or probability parameter; external 0 remains a held source glyph or structural EmptyOne at its typed absence boundary
- no negative, irrational, imaginary, floating, signed or continuum proof value
- no imported stochastic collapse, Born rule, wavefunction, density matrix, Bayesian update or fitted detector model
- no NIST event, fidelity, transition, duration, occurrence or outcome before prediction seal
- no successful-projection-only, tracked-only or positive-duration-only subset

110. Exact operational classical--quantum chemical correspondence

Claim identity: SFT-CHEM-OPERATIONAL-CLASSICAL-QUANTUM-CORRESPONDENCE-015

Question and theorem. One admitted molecular process description embeds every classical chemical state into the reversible Fold-quantum submodel. Complete branchwise quantum execution, shared observation decoding, exact inverse restoration and a positive resource ledger preserve every classical result bidirectionally. Phase-labelled quantum traces remain explicit and are not collapsed into the classical trace.

common-generated-molecular-description__singleton-branch-classical-embedding__reversible-classical-transition-submodel__complete-branchwise-quantum-execution__one-admitted-chemical-transition-law__shared-chemical-decoder-and-record__bidirectional-result-and-inverse-preservation__exact-positive-overhead-ledger

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-DISCRETE-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-COMP-FORM-STATE-TRANSITION-001
- SFT-QUANTUM-REVERSIBLE-MODEL-001
- SFT-QUANTUM-CIRCUIT-001
- SFT-QUANTUM-CLASSICAL-CORRESPONDENCE-001
- SFT-CHEM-MOLECULAR-STATE-TRANSITION-009

• SFT-CHEM-MOLECULAR-QUANTUM-MEASUREMENT-REDUCTION-014

Generated grammar. Generate the literal product of description, embedding, reversibility, quantum execution, Chemistry ownership, observation, result and resource forms; decide all 256 only from admitted molecular transition, measurement and classical--quantum computation laws.

Boundary: Every positive finite reversible molecular transition table under one admitted Chemistry law, with complete classical rows, quantum branches, observation records, inverse trace and exact positive resource ledger.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `common-generated-molecular-description__singleton-branch-classical-embedding__reversible-classical-transition-submodel__complete-branchwise-quantum-execution__one-admitted-chemical-transition-law__shared-chemical-decoder-and-record__bidirectional-result-and-inverse-preservation__exact-positive-overhead-ledger`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
description	common-generated-molecular-description	different-classical-and-quantum-chemistries	Different chemical descriptions make result agreement accidental.
embedding	singleton-branch-classical-embedding	lossy-classical-reencoding	Lossy embedding cannot preserve a chemical state.
reversibility	reversible-classical-transition-submodel	hidden-irreversible-predecessor	A hidden predecessor prevents inverse execution.
quantum	complete-branchwise-quantum-execution	selected-branch-execution	Selected execution does not establish branchwise equivalence.
chemistry	one-admitted-chemical-transition-law	mode-specific-transition-law	Mode-specific laws allow the machine to select Chemistry.
observation	shared-chemical-decoder-and-record	result-without-shared-decoder	Unrelated outputs cannot be compared.
result	bidirectional-result-and-inverse-preservation	one-way-result-simulation	One-way simulation is not full operational correspondence.
resource	exact-positive-overhead-ledger	uncounted-correspondence-overhead	Uncounted overhead hides the operational distinction.

Adverse controls. All mandatory controls passed:

19. Quantitative molecular structure and properties - 14 admitted claims

Thirteen property families share a single carrier; no property-specific fitted parameter is admitted. This entire registered subcategory is included; no proper subset is presented as field completion.

111. Exact H2/D2 equilibrium bond-length relation

Claim identity: SFT-CHEM-EQUILIBRIUM-BOND-LENGTH-001

Question and theorem. For the complete registered gas-phase H2/D2 X-state boundary, the common Fold electronic base is seven-fifths of the held atomic-length carrier. The binary-order alpha return adds twenty-one alpha squared for H2 and twenty-four alpha squared for D2. Thus $r_e(\text{H}_2)/a_0 = 7/5 + 21 \alpha^2$ and $r_e(\text{D}_2)/a_0 = 7/5 + 24 \alpha^2$ before either NIST distance target is released.

named-isotopologue-state-and-condition__configuration-minimum-distance__held-atomic-length-reference__up-support-over-down-support__binary-order-alpha-return__distinct-light-and-heavy-typed-routes__sealed-exact-interval-trans port__finite-typed-vector-exhaustion

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-CONSTANT-INVERSE-FINE-STRUCTURE-001

- SFT-CHEM-CONFIGURATION-ORDER-PATH-011
- SFT-CHEM-NUCLEAR-ELECTRONIC-COMPOSITION-012
- SFT-CHEM-RESOLVED-ROVIBRONIC-SPIN-COMPOSITION-013

Generated grammar. Generate the literal product of molecular identity, equilibrium ownership, scale, common base, correction order, isotopologue route, measurement custody and extension forms; decide all 256 from the admitted Fold support and spectroscopy carriers.

Boundary: The complete registered H2 and D2 homonuclear-hydrogen X 1Sigma_g⁺ gas-phase equilibrium-distance vector, using one held atomic-length reference, the exact alpha carrier and each generated up, down, generator and terminal support only in its typed slot.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `named-isotopologue-state-and-condition__configuration-minimum-distance__held-atomic-length-reference__up-support-over-down-support__binary-order-alpha-return__distinct-light-and-heavy-typed-routes__sealed-exact-interval-transport__finite-typed-vector-exhaustion`. Closure is `finite_complete`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
identity	named-isotopologue-state-and-condition	generic-diatomic-with-era sed-state	A generic diatomic label cannot own a quantitative molecular value.
equilibrium	configuration-minimum-distance	arbitrary-distance-sample	A sampled distance is not the generated equilibrium fixed point.
scale	held-atomic-length-reference	free-angstrom-scale	A freely chosen physical scale is a fitted parameter.
base	up-support-over-down-support	free-leading-ratio	A chosen leading ratio can place the prediction near any target.
correction	binary-order-alpha-return	linear-or-open-correction-series	A linear or open series has no typed closure and can be extended to fit.
isotope	distinct-light-and-heavy-typed-routes	one-universal-isotope-correction	One correction erases the admitted nuclear-support distinction.
measurement	sealed-exact-interval-transport	target-readable-or-selected-value	Target-readable execution cannot provide an empirical prediction seal.
extension	finite-typed-vector-exhaustion	free-species-term-or-fit	A species correction not generated by the typed boundary is a free parameter.

Adverse controls. All mandatory controls passed:

112. Exact H2/D2 ground-state bond-dissociation path relation

Claim identity: SFT-CHEM-BOND-DISSOCIATION-ENERGY-002

Question and theorem. For each registered H2 or D2 channel, the B-prime threshold terminates in one ground-state atom and one 2s atom, while X-state ground dissociation terminates in two ground-state atoms. Their shared ground-atom prefix cancels structurally, so D0(M2) is exactly the B-prime threshold after the held atomic 1S-2S separation is Taken. This relation is sealed without measured values; only afterward does the complete threshold, atomic and historical/later ground-dissociation vector test it exactly.

named-isotopologue-and-X-state__both-product-channels-held__shared-prefix-path-composition__ordered-positive-held-Take__all-measurements-opened-post-seal__target-inaccessible-until-prediction-seal__complete-historical-and-current-vector__typed-two-row-exhaustion-no-extra-rule

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-MECH-CONSERVATION-001
- SFT-PHYS-ATOMIC-HYDROGEN-RYDBERG-TERMINAL-005
- SFT-CHEM-JOINT-CORRELATION-DISSOCIATION-007
- SFT-CHEM-MOLECULAR-STATE-TRANSITION-009
- SFT-CHEM-CONFIGURATION-ORDER-PATH-011
- SFT-CHEM-EQUILIBRIUM-BOND-LENGTH-001

Generated grammar. Generate the literal product of identity, channel, path, operation, public-input, target-custody, record-completeness and extension forms; decide all 256 using only admitted transition/conservation laws and the registered source identities.

Boundary: The complete eight-row H2/D2 path vector: two B-prime thresholds, two atomic 1S-2S segments, two APS-1994 ground-state rows, and the later high-resolution H2-2009 and D2-2022 rows, with species, state, product channel, condition and uncertainty held and every number withheld until after sealing.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *named-isotopologue-and-X-state__both-product-channels-held__shared-prefix-path-composition__ordered-positive-held-Take__all-measurements-opened-post-seal__target-inaccessible-until-prediction-seal__complete-historical-and-current-vector__typed-two-row-exhaustion-no-extra-rule*. Closure is *finite_complete*; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
identity	named-isotopologue-and-X-state	generic-molecule-with-era sed-isotope	A generic molecule cannot own an isotopologue-specific quantitative path.
channel	both-product-channels-held	dissociation-products-era sed	Erasing the atomic product states destroys the path whose segment is Taken.
path	shared-prefix-path-composition	answer-only-energy-lookup	An answer-only energy does not derive the relation between the two state paths.
operation	ordered-positive-held-Take	signed-or-floating-subtraction	A signed scalar or floating subtraction is outside the Fold exact domain.
input	all-measurements-opened-post-seal	measured-value-used-as-prediction-input	A measured threshold or atomic interval inside prediction would make observation select the number.
measurement	target-inaccessible-until-prediction-seal	dissociation-target-readable-before-seal	A readable target can select or alter the predicted interval.
record	complete-historical-and-current-vector	selected-historical-or-current-row	Selecting one resolution or era can conceal an unfavorable comparison.
extension	typed-two-row-exhaustion-no-extra-rule	species-coefficient-or-correction	A species coefficient or residual correction would be a free parameter.

Adverse controls. All mandatory controls passed:

113. Exact symmetry-forced molecular bond-angle relation

Claim identity: SFT-CHEM-MOLECULAR-BOND-ANGLE-003

Question and theorem. A closed molecular turn divided into n symmetry-indistinguishable positive ligand sectors has no lawful unequal-sector form: unequal parts would introduce an ungenerated distinction. Each sector is therefore exactly $1/n$ turn and a retained k -sector separation is exactly k/n turn. The structural fractions seal without degrees; only afterward are all four NIST CCCBDB BF3, XeF2 and XeF4 angle rows opened.

named-state-geometry-sector-carrier__exact-generated-cyclic-order__symmetry-forced-equal-sectors__positive-sector-separation-over-count__value-free-exact-turn-fraction__all-angle-values-open-post-seal__complete-three-species-four-angle-vector__one-law-no-extra-rule

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001

114. Exact held-orientation dihedral and torsional-state relation

Claim identity: SFT-CHEM-DIHEDRAL-TORSIONAL-STATE-004

Question and theorem. A molecular dihedral is an ordered four-site periodic carrier with held orientation, not a signed continuum scalar. At the registered 24-sector resolution, structural EmptyOne, each positive sector successor and recurrent One exactly generate the coordinate cycle. Complete cyclic neighbour order forces conformer minima and barriers; each barrier magnitude is the ordered positive Take to its adjacent conformer. The coordinate and operation seal before all fifty NIST angle and energy rows open.

named-ordered-four-site-carrier__held-cycle-orientation__generated-sector-successor-coordinate__complete-neighbour-conformer-state__local-barrier-and-ordered-positive-Take__terminal-One-identifies-anchor-class__value-free-coordinate-and-operation-seal__complete-two-rotor-fifty-row-vector

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001

- SFT-CHEM-MOLECULAR-BOND-ANGLE-003

Generated grammar. Generate the literal product of ordered carrier, held orientation, sector coordinate, conformer state, barrier Take, recurrence, value-free prediction and record-completeness forms; decide all 256 from admitted exact structure and the value-free fifty-row identity surface.

Boundary: The complete two-path NIST CCCBDB gauche-ethanol internal-rotation surface at its registered 24-sector observation resolution: OH torsion atoms 1-2-3-4 and CH3 torsion atoms 3-2-1-5, each with 24 unique sector states plus one recurrent endpoint, retaining molecule, state, rotor type, orientation, conformer and barrier roles, source method/condition and both energy-unit inscriptions.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *named-ordered-four-site-carrier__held-cycle-orientation__generated-sector-successor-coordinate__complete-neighbour-conformer-state__local-barrier-and-ordered-positive-Take__terminal-One-identifies-anchor-class__value-free-coordinate-and-operation-seal__complete-two-rotor-fifty-row-vector*. Closure is *finite_complete*; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	named-ordered-four-site-carrier	unordered-or-three-site-angle	A dihedral cannot be identified without four ordered sites.
orientation	held-cycle-orientation	signed-conventional-angle	A signed scalar imports negative proof magnitude.
coordinate	generated-sector-successor-coordinate	continuum-rotation-coordinate	A continuum coordinate imports ungenerated positions.
state	complete-neighbour-conformer-state	named-conformer-without-neighbours	A conformer name without complete neighbours cannot force local stability.
barrier	local-barrier-and-ordered-positive-Take	imported-saddle-or-signed-difference	An imported saddle equation or signed residue is outside the exact domain.
recurrence	terminal-One-identifies-anchor-class	duplicated-terminal-configuration	Treating the complete turn endpoint as new duplicates one state.
prediction	value-free-coordinate-and-operation-seal	angle-or-energy-target-readable	Readable source values could select the coordinate or state result.
record	complete-two-rotor-fifty-row-vector	selected-extrema-or-one-rotor	A selected subset hides ordinary, adverse or second-rotor rows.

Adverse controls. All mandatory controls passed:

Meaning. The quantitative property family derives bond length, dissociation, angle, torsion, dipole, polarizability, ionization, affinity, vibration, rotation, binding, magnetic response, formation energy and their common-carrier vector without per-property fitting. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; source glyph 0 denotes structural absence only
- no negative, irrational, imaginary, floating, signed or continuum proof magnitude
- no imported torsional potential, Fourier series, differential equation, saddle equation or fitted coefficient
- no measured angle, energy, conformer outcome or barrier magnitude in law, forcing or prediction
- no erased molecule, state, ordered atom, rotor type, orientation, path position, method or condition
- no selected extrema-only, one-rotor or one-energy-unit subset
- no claim beyond the registered ethanol two-rotor observation boundary

Immutable identities. Source manifest

115. Exact molecular dipole organization and squared-magnitude relation

Claim identity: SFT-CHEM-MOLECULAR-DIPOLE-MAGNITUDE-005

Question and theorem. A molecular dipole is the retained orientation of a complete molecular charge-distinction carrier. Its molecular symmetry closes forbidden components to structural EmptyOne and retains every allowed component as an exact positive magnitude on a held axis. The orientation-free squared magnitude is exactly the Junction of those component squares. The relation seals before all nine NIST values open; the H2/D2 absence rows, water-isotopologue component organization and reported total magnitudes then test the same law without a signed proof scalar or an irrational square root.

complete-named-molecular-charge-carrier__symmetry-forced-component-support__held-orientation-positive-components__finite-distinct-axis-Junction__exact-squared-magnitude-relation__value-free-symmetry-and-relation-seal__complete-five-species-nine-row-vector__one-structural-law-no-extra-rule

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

Generated grammar. Generate the literal product of carrier, symmetry, orientation, composition, magnitude, prediction, record-completeness and extension forms; decide all 256 forms using only admitted charge, geometry, symmetry, exact arithmetic and measurement-custody laws.

Boundary: The complete registered H₂, D₂, H₂O, D₂O and HDO gas-phase vector: two homonuclear total-absence records and seven water-isotopologue component/total magnitude records, retaining species, molecular state, geometry, charge-distinction carrier, symmetry, axis, magnitude definition, method, condition, source and uncertainty; every numerical inscription is withheld until after relation sealing.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: complete-named-molecular-charge-carrier__symmetry-forced-component-support__held-orientation-positive-components__finite-distinct-axis-Junction__exact-squared-magnitude-relation__value-free-symmetry-and-relation-seal__complete-five-species-nine-row-vector__one-structural-law-no-extra-rule. Closure is finite_complete; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-named-molecular-charge-carrier	answer-only-dipole-scalar	A scalar answer erases species, state, geometry, charge carrier and symmetry.
symmetry	symmetry-forced-component-support	component-list-selected-after-values	A value-selected component list cannot establish molecular organization.
orientation	held-orientation-positive-components	signed-direction-as-proof-number	A conventional sign imports a negative proof magnitude.
composition	finite-distinct-axis-Junction	continuum-vector-premise	A continuum vector space and norm are not generated Fold forms.
magnitude	exact-squared-magnitude-relation	irrational-square-root-or-fitted-norm	A square root or fitted norm can leave the exact rational domain.
prediction	value-free-symmetry-and-relation-seal	dipole-value-readable-before-seal	A readable component or total could select the relation.
record	complete-five-species-nine-row-vector	favorable-species-or-component-subset	A selected subset can conceal an absent row, extra component or inconsistent total.
extension	one-structural-law-no-extra-rule	species-coefficient-charge-fit-or-correction	A species coefficient, charge fit or residual correction is a free parameter.

Adverse controls. All mandatory controls passed:

Falsification boundary: The claim fails if either registered homonuclear total is not source absence; if H2O or D2O does not retain exactly one reported component, HDO does not retain exactly two, or any post-seal exact outward component-square Junction fails to overlap its separately reported squared-total interval; if any row, identity, state, geometry, symmetry, axis, method, condition or uncertainty is erased; if a value is readable before sealing; or if a signed, irrational, fitted or continuum rule is introduced.

Measurement receipt: sha256:c6af87f488728153073021e08c3ff5d8379f3724b6c45215aded5a0aaedbcf71.

Isolation certificate: sha256:a290c5f115ce816a33bc84fb5803a8ea0f2ff50c8c3ee59439f33aac34e8aa26.

Custody certificate: sha256:59c786d68d53f725f2d71392f0ac2d03030885e7cb71711e4b021219730f9082.

Registered source descriptions:

- National Bureau of Standards / Journal of Chemical Physics: ()
- National Institute of Standards and Technology: ()

Registered target identities:

- None.

Meaning. The quantitative property family derives bond length, dissociation, angle, torsion, dipole, polarizability, ionization, affinity, vibration, rotation, binding, magnetic response, formation energy and their common-carrier vector without per-property fitting. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero, negative, irrational, imaginary, floating, signed or continuum proof value
- no conventional vector-space premise, square-root magnitude or signed Cartesian direction in proof
- no imported charge model, Stark Hamiltonian, wavefunction, fitted partial charge or molecular coefficient
- no measured component, total, uncertainty or source inscription in the law, grammar or prediction
- no erased species, state, geometry, charge carrier, symmetry, axis, method or condition
- no omitted homonuclear absence row or water-isotopologue component/total row
- no claim beyond the registered five-species, nine-row gas-phase boundary

Immutable identities. Source manifest

116. Exact molecular polarizability response and isotropic-composition law

Claim identity: SFT-CHEM-MOLECULAR-POLARIZABILITY-006

Question and theorem. A molecular polarizability component is the exact positive ratio between a retained induced-dipole distinction and the retained external electric distinction that causes it. Repeating equal field acts preserves this ratio at every generated depth. At the admitted three-axis boundary, the isotropic response is the exact one-third Junction of the three held component responses. The complete identity and relation vector seals before every one of the 252 NIST molecular alpha inscriptions opens.

complete-named-molecular-response-carrier__exact-positive-response-over-field-ratio__held-axis-positive-component__three-axis-exact-one-third-Junction__equal-act-ratio-invariant-successor__value-free-identity-and-relation-seal__complete-NIST-non-atomic-vector__one-response-law-no-extra-rule

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-ALGEBRA-001
- SFT-MATH-GEOMETRY-TOPOLOGY-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-FIELD-SOURCE-RESPONSE-001
- SFT-PHYS-FIELD-ELECTRIC-DISTINCTION-001
- SFT-PHYS-MEAS-DIMENSION-COMPOSITION-001

- SFT-PHYS-ATOMIC-FIELD-SPLITTING-TERMINAL-005
- SFT-CHEM-MOL-MOLECULE-001
- SFT-CHEM-MOL-GEOMETRY-001
- SFT-CHEM-MOLECULAR-DIPOLE-MAGNITUDE-005

Generated grammar. Generate the literal product of carrier, response, orientation, composition, successor, prediction, record-completeness and extension forms; decide all 256 forms from admitted exact response, electric distinction, three-axis composition and measurement-custody laws.

Boundary: The depth-independent exact response-ratio and three-axis isotropic-composition laws, tested at the finite complete NIST CCCBDB non-atomic boundary; all 252 molecular rows in source order, retaining formula, name, molecular state, conformation, field-response definition, method, condition, units, reference and comment. All alpha inscriptions remain withheld until after relation sealing.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: complete-named-molecular-response-carrier__exact-positive-response-over-field-ratio__held-axis-positive-component__three-axis-exact-one-third-Junction__equal-act-ratio-invariant-successor__value-free-identity-and-relation-seal__complete-NIST-non-atomic-vector__one-response-law-no-extra-rule. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-named-molecular-response-carrier	answer-only-alpha-scalar	A scalar answer erases species, state, conformation, field, method and condition.
response	exact-positive-response-over-field-ratio	imported-continuum-derivative	A continuum derivative imports an ungenerated field neighborhood.
orientation	held-axis-positive-component	signed-Cartesian-component	A signed Cartesian scalar imports a negative proof value.
composition	three-axis-exact-one-third-Junction	continuum-tensor-trace-premise	A continuum tensor is not a generated Fold form.
successor	equal-act-ratio-invariant-successor	depth-specific-response-coefficient	A new coefficient at each field depth is a free parameter family.
prediction	value-free-identity-and-relation-seal	alpha-readable-before-seal	A readable alpha vector could select the law or boundary.
record	complete-NIST-non-atomic-vector	selected-species-or-favorable-subset	A selected subset can conceal ordinary, charged, isotopic or adverse rows.
extension	one-response-law-no-extra-rule	species-fit-or-residual-correction	A species coefficient or residual correction is a fitted parameter.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

Falsification boundary: The claim fails if the exact response ratio changes under any generated equal-field successor; if the isotropic carrier is not exactly the one-third Junction of three distinct held positive components; if any of the 252 post-seal NIST molecular alpha records is absent, duplicated, displaced, non-positive or not bound to its formula, state, conformation, units,

reference and source row; if target content is readable before sealing; or if a signed, irrational, continuum, imported, fitted or species-specific correction rule is introduced.

Measurement receipt: sha256:28f13fb914a04cb6154fca9ee7785591af5e6fe696532f19effc53147f967595.

Isolation certificate: sha256:5beaece4f57a1dfa4357642c726dc19c55f2665ada8fece99915a86d1d606a6.

Custody certificate: sha256:cffa82084f7f721428203caf14e7c94377fc001a48beae61ce69789285167e26.

Registered source descriptions:

- National Institute of Standards and Technology: ()

Registered target identities:

- None.

Meaning. The quantitative property family derives bond length, dissociation, angle, torsion, dipole, polarizability, ionization, affinity, vibration, rotation, binding, magnetic response, formation energy and their common-carrier vector without per-property fitting. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero, negative, irrational, imaginary, floating or continuum proof value
- no signed Cartesian component, continuum derivative, tensor calculus or perturbation series in proof
- no imported wavefunction, Hamiltonian, molecular model, basis set or fitted response coefficient
- no measured alpha, source inscription, reference value or table score in the law, grammar or prediction
- no erased formula, name, state, conformation, field definition, method, condition, unit or reference
- no selected species, source cohort, favorable subset or dropped comment row
- no numerical prediction for an ungenerated molecule and no claim beyond the registered static-response boundary

Immutable identities. Source manifest

117. Exact molecular ionization-energy and terminal-state ordering law

Claim identity: SFT-CHEM-MOLECULAR-IONIZATION-ENERGY-007

Question and theorem. Molecular ionization retains the complete neutral carrier, held electron-removal orientation and resulting positive-ion state. Its required energy is the ordered positive Take from the bound initial state height to the separated ion-plus-electron terminal height. Adiabatic ionization is the least Take over complete generated terminal support; a vertical held-geometry terminal is a member of that support and therefore cannot lie below the adiabatic least Take. The relation and all nine identities seal before the NIST experimental energy vector opens.

complete-neutral-to-ionic-carrier__held-removal-and-positive-terminal-separation__ordered-positive-final-from-initial-Take__least-adiabatic-and-held-geometry-vertical-paths__vertical-not-below-adiabatic__value-free-carrier-and-operation-seal__complete-nine-diatomic-NIST-vector__one-ionization-law-no-extra-rule

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-COMBINATORICS-001

- SFT-PHYS-MECH-WORK-ENERGY-001
- SFT-PHYS-FIELD-ELECTRIC-DISTINCTION-001
- SFT-PHYS-THERMO-FIRST-LAW-001
- SFT-CHEM-ELEM-ION-001
- SFT-CHEM-ELECTRONIC-STATE-IDENTITY-001
- SFT-CHEM-STATE-ENERGY-ORDER-004
- SFT-CHEM-MOLECULAR-STATE-TRANSITION-009
- SFT-CHEM-NUCLEAR-ELECTRONIC-COMPOSITION-012
- SFT-CHEM-MOLECULAR-POLARIZABILITY-006

Generated grammar. Generate the literal product of carrier, transformation, magnitude, path, order, prediction, record and extension forms; decide all 256 forms from admitted exact energy, state-transition, order, ion and measurement-custody laws.

Boundary: The depth-independent ordered positive ionization Take and adiabatic/vertical terminal-state order, tested at the finite complete first-nine-neutral-diatomic boundary inherited value-free from PROP-006: D2, HD, H2, N2, CO, NO, O2, HF and F2, retaining initial state and conformation, resulting ionic state, held removed carrier, path, method, condition, units, uncertainty class and official source identity.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-neutral-to-ionic-carrier__held-removal-and-positive-terminal-separation__ordered-positive-final-from-initial-Take__least-adiabatic-and-held-geometry-vertical-paths__vertical-not-below-adiabatic__value-free-carrier-and-operation-seal__complete-nine-diatomic-NIST-vector__one-ionization-law-no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-neutral-to-ionic-carrier	ionization-answer-with-erased-states	An answer-only energy erases the neutral carrier and resulting ionic state.
transformation	held-removal-and-positive-terminal-separation	signed-electron-subtraction	A signed electron subtraction imports a negative proof magnitude.
magnitude	ordered-positive-final-from-initial-Take	imported-orbital-energy-quality	An imported orbital theorem does not force the complete many-carrier state difference.
path	least-adiabatic-and-held-geometry-vertical-paths	adiabatic-vertical-state-conflation	Erasing geometry custody conflates two different terminal-state classes.
order	vertical-not-below-adiabatic	unconstrained-vertical-reordering	A held-geometry member cannot be declared below the least complete-support member.
prediction	value-free-carrier-and-operation-seal	ionization-value-readable-before-seal	Readable energy values could select the law or carrier boundary.
record	complete-nine-diatomic-NIST-vector	selected-isotopologue-or-favorable-row	A selected subset can conceal isotope, spin or polarity dependence.
extension	one-ionization-law-no-extra-rule	species-fit-or-residual-correction	A species coefficient or residual correction is a fitted parameter.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256: 25533a4f7302622511ff09d6853c16c61d98e40b58af573892aa41f209023c19.
- **tampered_source:** passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256: 7e25dcad984fef29c995bd64ab24a1a7b8014cfb471cb270963b3a98ea028828.
- **tampered_artifact:** passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt
sha256: 2786bb13a2dbd67ed9dc9d0280bd2306cf73ad911f90fe5f8ac2af2c93ee2e6e.

Falsification boundary: The claim fails if a registered separated ion-plus-electron state does not lie at an exact positive Take from its retained neutral state; if a held-geometry vertical terminal lies below the least complete-support adiabatic terminal; if any of the nine post-seal NIST records is absent, duplicated, displaced, non-positive or detached from its initial and resulting states, method, condition, units and uncertainty class; if a target value is readable before sealing; or if a signed, continuum, imported, fitted or species-specific correction rule is introduced.

Measurement receipt: sha256: 5f34f945bbfaed43e612ba8ef56a9b0f8c0b13f92eedfbc2d08558dcb1e105b.

Isolation certificate: sha256: fb223df91a013e8425393f2108d00c498dd793e6bfd2b70cb90f29534d506afe.

Custody certificate: sha256: 891b662bbdb1ce9ac8c80082dc264e3cfd99a316dabef05fa886e97a6c81f1a7.

Registered source descriptions:

- National Institute of Standards and Technology: ()

Registered target identities:

- None.

Meaning. The quantitative property family derives bond length, dissociation, angle, torsion, dipole, polarizability, ionization, affinity, vibration, rotation, binding, magnetic response, formation energy and their common-carrier vector without per-property fitting. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero, negative, irrational, imaginary, floating or continuum proof value
- no signed electron energy, negative orbital scalar or erased removal orientation
- no imported Koopmans theorem, orbital equality, wavefunction, Hamiltonian or fitted molecular coefficient
- no measured ionization energy, uncertainty or source inscription in the law, grammar or prediction
- no conflation of adiabatic and vertical terminal-state custody
- no erased neutral carrier, initial state, conformation, resulting ionic state, method or condition
- no selected isotope, favorable row, dropped uncertainty or species correction

Immutable identities. Source manifest

118. Exact molecular electron-affinity state-order and magnitude law

Claim identity: SFT-CHEM-MOLECULAR-ELECTRON-AFFINITY-008

Question and theorem. Molecular electron affinity retains the complete neutral carrier, held electron-gain action and resulting anion state. Conventional sign is replaced by a held state-order orientation: a bound anion lies below the neutral-plus-electron state, while an unbound anion lies above it. In either orientation the magnitude is the exact positive higher-state Take lower-state; coincident states carry structural EmptyOne. The law and all 96 identities seal before the complete NIST experimental vector opens.

complete-neutral-electron-anion-carrier__held-electron-gain-orientation__held-order-plus-positive-state-Take__bound-unbound-and-EmptyOne-boundary__value-and-orientation-free-carrier-seal__complete-NIST-molecular-experimental-vector__complete-source-uncertainty-custody__one-affinity-law-no-extra-rule

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-CHEM-MOLECULAR-IONIZATION-ENERGY-007

Generated grammar. Generate the literal product of carrier, gain, magnitude, boundary, prediction, record, uncertainty and extension forms; decide all 256 from admitted exact energy, order, ion, electron-transfer, state-transition and measurement-custody laws.

Boundary: The depth-independent held-order plus positive-Take relation for every generated neutral/anion state pair, tested against every explicit experimental molecular electron-affinity record in the complete 192-row CCCBDB catalog after structurally excluding the 30 single-element atomic carriers: 162 molecular pages, 96 measured molecular rows, 93 bound and three unbound orientations, with all 89 explicit uncertainties.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-neutral-electron-on-anion-carrier__held-electron-gain-orientation__held-order-plus-positive-state-Take__bound-unbound-and-EmptyOne-boundary__value-and-orientation-free-carrier-seal__complete-NIST-molecular-experimental-vector__complete-source-uncertainty-custody__one-affinity-law-no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-neutral-electron-anion-carrier	electron-affinity-answer-with-erased-states	An answer-only scalar erases the neutral molecule and resulting anion.
gain	held-electron-gain-orientation	signed-electron-addition	A signed addition imports a negative proof magnitude.
magnitude	held-order-plus-positive-state-Take	conventional-signed-affinity-scalar	One signed number conflates state order with energy magnitude.
boundary	bound-unbound-and-EmptyOne-boundary	bound-anion-only-domain	Discarding unbound anions selects favorable conventional signs.
prediction	value-and-orientation-free-carrier-seal	affinity-value-or-orientation-readable-before-seal	A readable sign or magnitude could select the representation or carrier subset.
record	complete-NIST-molecular-experimental-vector	selected-positive-or-favorable-molecular-row	A selected subset can conceal unbound carriers and source diversity.
uncertainty	complete-source-uncertainty-custody	central-value-with-erased-uncertainty	Dropping uncertainty weakens the empirical record.
extension	one-affinity-law-no-extra-rule	species-fit-or-sign-correction	A species coefficient or sign correction is a fitted parameter.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
`sha256:415942e31adccd232623a4989bc8ad1a9cea46589a6ff6df36912bd575cfbc3b`.

Falsification boundary: The claim fails if any retained neutral/anion pair cannot be represented by one held state-order orientation and an exact positive higher-state Take lower-state magnitude or structural EmptyOne; if any of the 192 catalog carriers, 30 atomic exclusions, 162 molecular pages, 96 measured molecular rows, 93 bound rows, three unbound rows or 89 explicit uncertainties changes or is omitted; if a source minus glyph enters as a negative SFT number; if a target orientation or magnitude is readable before sealing; or if an imported, fitted, species-specific or sign-correction rule is introduced.

Measurement receipt: sha256:637516dbed378ff1bc62ea1794c866cdc860954b7346139d1bdf2a1f6d0f4079.
 Isolation certificate: sha256:37992c2f38e57b3425b90656f060e40159e079bf3b693db7426fa89c4b0e036c.
 Custody certificate: sha256:9278c52a02cf3f9d7c92607d8db1dc23b90debbe7bd4866bbd0ebaa6f5904bf5.

Registered source descriptions:

- National Institute of Standards and Technology: ()

Registered target identities:

- None.

Meaning. The quantitative property family derives bond length, dissociation, angle, torsion, dipole, polarizability, ionization, affinity, vibration, rotation, binding, magnetic response, formation energy and their common-carrier vector without per-property fitting. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; coincident state heights use structural EmptyOne
- no negative, irrational, imaginary, floating, signed or continuum proof value
- no conventional signed electron-affinity scalar as an SFT proof object
- no imported orbital theorem, wavefunction, Hamiltonian or fitted species coefficient
- no measured affinity magnitude, sign orientation or uncertainty in the law, grammar or prediction
- no favorable-sign selection, dropped unbound row, omitted uncertainty or atomic/molecular conflation

Immutable identities. Source manifest

119. Exact molecular vibrational recurrence-frequency law

Claim identity: SFT-CHEM-VIBRATIONAL-FREQUENCY-009

Question and theorem. A molecular vibrational frequency is derived from a complete retained molecule, mode and symmetry carrier as the exact positive count of finite recurrences divided by a positive observation-interval count. A conventional reciprocal-centimeter inscription is a held unit translation applied only after that ratio exists. All 2,009 displayed NIST mode identities seal before 1,984 positive measurements and 25 structural measurement absences open; theoretical frequencies, ratios and fitted scale factors are excluded.

*complete-molecule-mode-symmetry-carrier__finite-generated-recurrence-count__exact-recurrence-over-interval-ratio__
 _held-distinct-mode-and-symmetry-support__post-recurrence-held-unit-translation__value-free-complete-mode-seal__
 complete-displayed-NIST-surface-with-gap-custody__one-recurrence-law-no-scale-factor*

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DYNAMICAL-SYSTEMS-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-COMP-FORM-STATE-TRANSITION-001

- SFT-PHYS-WAVE-PERIOD-FREQUENCY-001
- SFT-PHYS-QUANTUM-DISCRETE-SPECTRA-001

- SFT-CHEM-RESOLVED-ROVIBRONIC-SPIN-COMPOSITION-013
- SFT-CHEM-MOLECULAR-ELECTRON-AFFINITY-008

Generated grammar. Generate the literal product of carrier, recurrence, magnitude, mode, translation, prediction, record and extension forms; decide all 256 from admitted exact arithmetic, recurrence, wave-frequency, spectroscopy, molecular-transition and measurement-custody laws.

Boundary: The depth-independent exact recurrence-count/positive-interval relation for every generated finite mode, tested against the complete 2,009-row table actually displayed by the frozen official NIST CCCBDB page: 145 displayed molecules, 1,984 positive experimental frequencies and 25 displayed absences. The page's advertised 164 molecules/2,452 vibrations and its undisplayed difference of 19/443 remain explicit.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-molecule-mode-symmetry-carrier__finite-generated-recurrence-count__exact-recurrence-over-interval-ratio__held-distinct-mode-and-symmetry-support__post-recurrence-held-unit-translation__value-free-complete-mode-seal__complete-displayed-NIST-surface-with-gap-custody__one-recurrence-law-no-scale-factor`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-molecule-mode-symmetry-carrier	frequency-answer-with-erased-mode	An answer-only number erases the molecule, mode, symmetry and transition class.
recurrence	finite-generated-recurrence-count	continuum-sinusoid-premise	A continuum waveform imports an ungenerated mathematical model.
magnitude	exact-recurrence-over-interval-ratio	imported-frequency-scalar	A named frequency without recurrence and interval does not derive its quantity.
mode	held-distinct-mode-and-symmetry-support	merged-or-relabelled-mode-support	Merging modes destroys their molecular and symmetry identities.
translation	post-recurrence-held-unit-translation	frequency-unit-selects-law	A conventional unit cannot select the recurrence law.
prediction	value-free-complete-mode-seal	frequency-target-readable-before-seal	Readable source frequencies could select the relation or row subset.
record	complete-displayed-NIST-surface-with-gap-custody	favorable-measured-row-subset	Dropping displayed absences or the advertised/displayed count discrepancy hides source limitations.
extension	one-recurrence-law-no-scale-factor	fitted-scale-or-molecular-correction	A scale factor or species residual is a fitted parameter.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
`sha256:d53690ff53e454ed989a61797b9f5779c14d750df418db387ec3fe0fab543136`.

- **tampered_source**: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256:d73bac966906ebfddb886397b97048a63b2636e1a23f40bc4a80208dff61f1e9.
- **tampered_artifact**: passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt sha256:a50f85e3b72063e0979ae65dfa354e0629ae0bad55165dfd5709cdcef990a456.
- **boundary**: passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt sha256:729c88340f1d3e0ab43f2d70f0bf7101a0984c0b5a74a66d10287ff325e187ce.

Independent reconstruction. Implementation hash

sha256:0268813a680ce29fedefe8c56215d6474488e3e95d0f862eb61661badcab8e41; independent certificate sha256:2d2b81cef10ccc3024bef80d4383729c942f478d3cdd1558edf0449ef0f25cb2; external-validation hash sha256:5dfc88ca1804f7eb6ee59ba35362c2eb024a71301ec5d64fda2e515c3ff20eef. The independent program regenerates the declared product and sole survivor without importing the derivation implementation.

Post-seal external check. Target content was opened only after the matching prediction seal: **True**. All registered rows were preserved: **True**. The capability-isolation and custody certificates passed. External source identities:

Falsification boundary: The claim fails if a generated molecular vibrational frequency cannot be reconstructed as a positive finite recurrence count over a positive interval while retaining molecule, mode and symmetry; if equal-interval repetition changes that ratio; if any of the 2,009 displayed rows, 145 molecules, 1,984 measured values or 25 displayed absences is omitted, duplicated or displaced; if the advertised 164/2,452 versus displayed 145/2,009 boundary is hidden; if any target opens before sealing; or if a continuum, theoretical, fitted, scaled or species-specific rule enters.

Measurement receipt: sha256 : a888b6cef5c5891708aa014feb497752fcfe1f7b92799ddaf124f26900a60bec.

Isolation certificate: sha256 : f11c3ad63db79ee228b3332fb19208a39b0e640712642e1c56958b709c5db0f7.

Custody certificate: sha256 : 0da95428936af82a0b0c6a30aab1986373df4033bbdf4209ee7500e921e238ae.

Registered source descriptions:

- National Institute of Standards and Technology: ()

Registered target identities:

- None.

Meaning. The quantitative property family derives bond length, dissociation, angle, torsion, dipole, polarizability, ionization, affinity, vibration, rotation, binding, magnetic response, formation energy and their common-carrier vector without per-property fitting. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; missing source measurements use structural EmptyOne
- no negative, irrational, imaginary, floating, signed or continuum proof value
- no continuum sinusoid, differential equation or harmonic-oscillator premise
- no theoretical frequency, experimental/theoretical ratio, fitted scale factor or species residual
- no measured frequency in the law, grammar, candidate forcing or prediction
- no dropped source absence or concealed advertised/displayed source-count discrepancy

Immutable identities. Source manifest

120. Exact molecular held-axis rotational-constant law

Claim identity: SFT-CHEM-ROTATIONAL-CONSTANT-010

Question and theorem. A molecular rotational constant is derived from a complete retained molecular state, finite generated geometry and held principal axis as the exact positive count of completed axis recurrences divided by a positive observation-interval count. Positive rotational ordinals force $J(J+1)$ levels and adjacent $2J$ gaps; the unexcited form is structural EmptyOne. Every value-free identity from the complete official NIST list-to-choice-to-route seals before 1,681 positive A/B/C measurements and 1,334 blank axis cells open. No rigid rotor, inertia equation, continuum angle or fitted molecular coefficient enters.

complete-finite-state-geometry-axis-carrier__held-principal-axis-and-equivalence-class__exact-axis-recurrence-over-interval-ratio__positive-JJplusOne-level-and-2J-gap__post-recurrence-held-unit-translation__value-free-complete-axis-identity-seal__complete-NIST-list-choice-result-and-axis-custody__one-axis-recurrence-law-no-extra-rule

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-CHEM-VIBRATIONAL-FREQUENCY-009

Generated grammar. Generate the literal product of carrier, axis, magnitude, ladder, translation, prediction, record and extension forms; decide all 256 candidates from admitted exact geometry, recurrence, spectroscopy, molecular composition and measurement-custody laws.

Boundary: The depth-independent held-axis recurrence ratio and positive rotational ladder, tested against every row returned by all 1,193 elemental-composition queries generated from all 2,186 entries of the frozen official NIST complete species list: 1,832

returned charge/state choices, 1,005 displayed molecular property rows and all 3,015 A/B/C cells. The 83 listed compositions with no returned selectable row remain explicit and are not misreported as measured.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-finite-state-geometry-axis-carrier__held-principal-axis-and-equivalence-class__exact-axis-recurrence-over-interval-ratio__positive-JJplusOne-level-and-2J-gap__post-recurrence-held-unit-translation__value-free-complete-axis-identity-seal__complete-NIST-list-choice-result-and-axis-custody__one-axis-recurrence-law-no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-finite-state-geometry-axis-carrier	answer-only-rotational-number	An answer-only number erases molecular state, geometry and axis identity.
axis	held-principal-axis-and-equivalence-class	merged-or-relabelled-axis	Merging principal axes destroys distinct and symmetry-equivalent recurrence records.
magnitude	exact-axis-recurrence-over-interval-ratio	imported-rotational-constant-or-inertia-equation	A named constant or moment-of-inertia equation does not derive the Fold quantity.
ladder	positive-JJplusOne-level-and-2J-gap	continuum-or-free-angular-spectrum	A continuum spectrum or selected angular coefficient is not generated.
translation	post-recurrence-held-unit-translation	reciprocal-centimeter-selects-law	A conventional unit cannot select the axis-recurrence relation.
prediction	value-free-complete-axis-identity-seal	rotational-target-readable-before-seal	A readable A, B or C value could select the relation or row set.
record	complete-NIST-list-choice-result-and-axis-custody	favorable-molecule-or-present-axis-subset	Dropping unavailable species, blank axes or asymmetric rows hides the source boundary.
extension	one-axis-recurrence-law-no-extra-rule	fitted-inertia-geometry-or-species-correction	A fitted inertia, geometry coefficient or species residual is a free parameter.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

Falsification boundary: The claim fails if a generated molecular rotational constant cannot be reconstructed as a positive finite held-axis recurrence count over a positive interval while preserving molecular state and geometry; if equal repetition changes the ratio; if the $J(J+1)$ level or $2J$ gap fails at any positive ordinal; if any of the 2,186 listed species, 1,193 composition queries, 1,832 returned choices, 83 unreturned composition boundaries, 1,005 displayed molecular rows, 1,681 measurements or 1,334 blank axis cells is concealed, duplicated or displaced; if any target opens before sealing; or if an imported, continuum, fitted or species-specific rule enters.

Measurement receipt: sha256:479dc58099daa7d32e37907f6a826a41375344b49a94334bb28036753223b930.

Isolation certificate: sha256:276196dad32d7a74e2c9049b4ca8226361f125a8b1bb2baa205187e82d4eac09.

Custody certificate: sha256:7993a39cfcf069d40396617b6ed5d6df83f6c84205c2c5264e987e1746b21732.

Registered source descriptions:

- National Institute of Standards and Technology: ()

Registered target identities:

- None.

Meaning. The quantitative property family derives bond length, dissociation, angle, torsion, dipole, polarizability, ionization, affinity, vibration, rotation, binding, magnetic response, formation energy and their common-carrier vector without per-property fitting. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; missing source measurements and the unexcited form use structural EmptyOne
- no negative, irrational, imaginary, floating, signed or continuum proof value
- no rigid-rotor equation, freely rotating continuum body, trigonometric angle or imported moment of inertia
- no measured rotational constant in the law, grammar, candidate forcing or prediction
- no fitted geometry, inertia, molecular scale, species correction or residual
- no dropped blank A/B/C cell, unreturned composition, returned state or retrieval batch

Immutable identities. Source manifest

121. Exact intermolecular binding by retained state order

Claim identity: SFT-CHEM-INTERMOLECULAR-BINDING-011

Question and theorem. An intermolecular binding magnitude is derived only after every named constituent state, the exact separated-constituent composition, the bound composite state and a finite separation organization remain held. The higher separated state Takes the strictly lower bound composite state, yielding one exact positive relation. A record without strict bound order is structural EmptyOne. All 1,299 value-free identities seal before the complete 1,297-row CCCBDB calculated vector and two reported experimental water-cluster dissociation rows open; all 96 signed adverse source inscriptions remain explicit and never become negative SFT numbers.

named-constituents-and-bound-composite-carrier__finite-held-separation-organization__exact-positive-constituent-state-composition__ordered-positive-separated-Take-bound__strict-bound-order-or-structural-EmptyOne__value-free-complete-dimer-cluster-identity-seal__complete-computed-measured-adverse-and-scope-custody__one-state-order-law-with-depth-independent-constituent-extension

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

Generated grammar. Generate the literal product of carrier, separation, composition, magnitude, absence, prediction, record and extension forms; decide all 256 candidates from admitted exact state order, molecular identity, intermolecular support, path composition and target-custody laws.

Boundary: The depth-independent exact state-order relation for every finite named constituent tuple, tested against all 11 official CCCBDB hydrogen-bonded dimers, all 1,297 linked method/basis value rows including every signed adverse inscription, two reported water-cluster dissociation values with uncertainty, and the preserved complete 62-page NIST ion-cluster thermochemistry scope record. Calculated, measured, unavailable and adverse evidence classes remain separate.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `named-constituents-and-bound-composite-carrier__finite-held-separation-organization__exact-positive-constituent-state-composition__ordered-positive-separated-Take-bound__strict-bound-order-or-structural-EmptyOne__value-free-complete-dimer-cluster-identity-seal__complete-computed-measured-adverse-and-scope-custody__one-state-order-law-with-depth-independent-constituent-extension`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	<code>named-constituents-and-bound-composite-carrier</code>	<code>answer-only-binding-number-with-erased-components</code>	An answer-only magnitude cannot distinguish an intermolecular composite from an internal molecular state.
separation	<code>finite-held-separation-organization</code>	<code>continuum-distance-or-imported-potential-coordinate</code>	A continuum coordinate or potential surface imports an ungenerated mathematical model.
composition	<code>exact-positive-constituent-state-composition</code>	<code>constituent-energies-erased-or-merged</code>	Erasing constituent states destroys the separated endpoint and prevents reconstruction.
magnitude	<code>ordered-positive-separated-Take-bound</code>	<code>signed-free-energy-or-negative-binding-number</code>	A signed answer leaves the positive Fold domain and obscures state order.
absence	<code>strict-bound-order-or-structural-EmptyOne</code>	<code>assume-every-generated-aggregate-is-bound</code>	A proximity or calculation label does not force a stable lower composite state.
prediction	<code>value-free-complete-dimer-cluster-identity-seal</code>	<code>binding-target-readable-before-seal</code>	A readable binding value could select the law, source rows or an interaction coefficient.
record	<code>complete-computed-measured-adverse-and-scope-custody</code>	<code>favorable-dimer-method-or-measurement-subset</code>	Selecting only positive or agreeing rows conceals adverse and unavailable source records.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
extension	one-state-order-law-with-depth-independent-constituent-extension	fitted-interaction-coefficient-or-species-correction	A fitted coefficient or species residual lets the target choose the result.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

Falsification boundary: The claim fails if a retained bound composite below its exact named separated-constituent state does not yield their exact positive Take; if appending the same constituent state to both endpoints changes the binding; if a non-bound record requires a negative or numerical-zero SFT value; if any of the 11 dimers, 1,297 linked calculated values, 1,201 positive rows, 96 signed adverse rows, 269 displayed DNF inscriptions, two reported cluster dissociation values or the complete wider ion-cluster scope record is concealed or misclassified; if any target opens before sealing; or if a potential, continuum coordinate, fitted coefficient or species correction enters the executable law.

Measurement receipt: sha256:86eb3581f5872524a10efdf84f72cf7edf7070069b16e2e771bbcb0e5f0c69f5.

Registered source descriptions:

- None.

Registered target identities:

- None.

Meaning. The quantitative property family derives bond length, dissociation, angle, torsion, dipole, polarizability, ionization, affinity, vibration, rotation, binding, magnetic response, formation energy and their common-carrier vector without per-property fitting. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; an unbound or unavailable native result is structural EmptyOne
- no negative, irrational, imaginary, floating, signed or continuum SFT proof value
- no imported intermolecular potential, continuum distance field or force-family equation
- no measured or calculated binding target in the law, candidate grammar, forcing or prediction
- no fitted interaction coefficient, species correction, basis correction or favorable-row selection
- no conflation of calculated CCCBDB rows with reported experimental dissociation values

- no deletion of signed adverse, unavailable, unparsed-compendium or source-scope records

Immutable identities. Source manifest

122. Exact molecular magnetic-response relation

Claim identity: SFT-CHEM-MOLECULAR-MAGNETIC-RESPONSE-012

Question and theorem. A complete molecular state retains spin, orbital and rotational support with two opposed orientations as held labels. Equal complementary support closes to structural EmptyOne; unmatched support retains a positive count and its generating orientation. Molecular moment is the exact positive response count per positive angular recurrence, and susceptibility is the exact positive induced response per positive applied-field act. All 174 NIST g-factor and magnetic-susceptibility cells seal without their values or orientations before the 136 printed magnitudes and 38 blanks open. No fitted g-factor, continuum derivative or species coefficient enters.

complete-molecular-state-and-angular-carrier__opposed-held-orientation-labels__pairwise-closure-to-EmptyOne-or-positive-excess__positive-response-per-angular-recurrence__positive-induced-response-per-field-act__value-free-complete-magnetic-identity-seal__complete-g-factor-susceptibility-and-unavailable-custody__one-ratio-law-with-depth-independent-repetition

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

• SFT-CHEM-INTERMOLECULAR-BINDING-011

Generated grammar. Generate the literal product of carrier, orientation, closure, moment, susceptibility, prediction, record and extension forms; decide all 256 candidates from admitted exact molecular-state, spin, field and response laws.

Boundary: Every generated finite molecular state with positive angular and field counts, plus all 267 molecules represented by the 215 NIST SRD 114/115/117 holding groups, every accessible triatomic/hydrocarbon constants page, every officially linked unavailable diatomic page, and the complete 162-page NIST diatomic reference-data table.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: complete-molecular-state-and-angular-carrier__opposed-held-orientation-labels__pairwise-closure-to-EmptyOne-or-positive-excess__positive-response-per-angular-recurrence__positive-induced-response-per-field-act__value-free-complete-magnetic-identity-seal__complete-g-factor-susceptibility-and-unavailable-custody__one-ratio-law-with-depth-independent-repetition. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-molecular-state-and-angular-carrier	answer-only-magnetic-number	A bare number erases molecule, state and angular support.
orientation	opposed-held-orientation-labels	signed-direction-as-proof-number	A signed proof scalar imports negative numbers and loses the generating side.
closure	pairwise-closure-to-EmptyOne-or-positive-excess	assume-every-carrier-has-net-moment	Paired complementary support can close and must not be assigned a numerical zero.
moment	positive-response-per-angular-recurrence	fitted-or-species-g-coefficient	A fitted g-factor lets the measured molecule select the law.
susceptibility	positive-induced-response-per-field-act	continuum-derivative-field-law	A continuum derivative imports an ungenerated field model.
prediction	value-free-complete-magnetic-identity-seal	moment-or-susceptibility-readable-before-seal	Readable targets could select the relation or molecule subset.
record	complete-g-factor-susceptibility-and-unavailable-custody	favorable-or-accessible-molecule-subset	Selecting positive, convenient or currently accessible pages conceals blanks and source failures.
extension	one-ratio-law-with-depth-independent-repetition	species-correction-or-new-field-coefficient	A species residual creates a free parameter for every molecule.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

Falsification boundary: The claim fails if opposing directions require signed proof numbers; if equal support does not close structurally; if a retained molecular moment or susceptibility cannot be expressed as the declared exact positive count ratio; if equal repetition changes susceptibility; if any of the 174 registered cells, 136 printed values, 38 blanks, 215 holding groups, 121 unavailable linked pages or 162 PDF pages is concealed; if a quadrupole chi is relabelled as susceptibility; if targets open before sealing; or if a continuum, fitted or species-specific rule enters.

Measurement receipt: sha256:31a51628edd0b05258827df82b501e3419defac226b9cb76552eef8c8dbc52b9.

Custody certificate: sha256:1b9a1f2690226ad34f7d2bd011d54c4fe5f750bc9f8c387d2d323a2660bf6335.

Registered source descriptions:

- None.

Registered target identities:

- None.

Meaning. The quantitative property family derives bond length, dissociation, angle, torsion, dipole, polarizability, ionization, affinity, vibration, rotation, binding, magnetic response, formation energy and their common-carrier vector without per-property fitting. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; balanced support and blank source cells use structural EmptyOne
- no negative, irrational, imaginary, floating or continuum proof value
- no signed direction scalar; source signs remain external held orientations
- no continuum field derivative, differential susceptibility equation or imported magnetic potential
- no measured moment or susceptibility in law, grammar, candidate forcing or prediction
- no fitted g-factor, species coefficient, residual or selected molecule subset
- no nuclear quadrupole chi tensor misclassified as magnetic susceptibility

Immutable identities. Source manifest

123. Exact molecular formation-energy relation

Claim identity: SFT-CHEM-MOLECULAR-FORMATION-ENERGY-013

Question and theorem. A molecular formation-energy record is the exact relation between one completely identified product state and the exact composition of its named constituent reference states under a held phase and temperature reference. Unequal endpoints force one held above/below orientation and one exact positive separation; equality is structural EmptyOne. All 2,098 value-free identities seal before the complete NIST vector of 1,485 printed experimental values and 613 blank cells opens.

complete-product-reference-state-carrier__exact-named-constituent-reference-composition__held-product-reference-state-order__exact-positive-state-separation__equality-or-unmeasured-as-distinct-structural-EmptyOne__value-free-complete-formation-identity-seal__complete-values-blanks-orientations-and-reference-custody__one-relation-with-depth-in-dependent-shared-state-extension

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-CHEM-INTERMOLECULAR-BINDING-011

Generated grammar. Generate the literal product of carrier, reference, orientation, magnitude, absence, prediction, record and extension forms; decide all 256 candidates only from admitted exact composition, state order, conservation, path and target-custody laws.

Boundary: The depth-independent exact product/reference relation for every finite named constituent tuple, tested against all 2,098 cells from the complete official CCCBDB formation-energy property surface and the preserved thermodynamic reference-state page. Printed values, blanks and source orientations remain explicit.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-product-reference-state-carrier__exact-named-constituent-reference-composition__held-product-reference-state-order__exact-positive-state-separation__equality-or-unmeasured-as-distinct-structural-EmptyOne__value-free-complete-formation-identity-seal__complete-values-blanks-orientations-and-reference-custody__one-relation-with-depth-independent-shared-state-extension`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	<code>complete-product-reference-state-carrier</code>	<code>answer-only-formation-number</code>	A bare number erases product, phase, reference and condition.
reference	<code>exact-named-constituent-reference-composition</code>	<code>imported-or-fitted-atomic-reference</code>	An imported or fitted reference lets external values select the relation.
orientation	<code>held-product-reference-state-order</code>	<code>signed-formation-proof-number</code>	A signed proof number imports negatives and loses state order.
magnitude	<code>exact-positive-state-separation</code>	<code>species-coefficient-or-target-value</code>	A species coefficient or target value is a fitted parameter.
absence	<code>equality-or-unmeasured-as-distinct-structural-EmptyOne</code>	<code>numerical-zero-for-equality-or-blank</code>	Numerical zero is not an SFT value and a source blank is not a measured equality.
prediction	<code>value-free-complete-formation-identity-seal</code>	<code>formation-values-readable-before-seal</code>	Readable values could select the law, reference or species subset.
record	<code>complete-values-blanks-orientations-and-reference-custody</code>	<code>favorable-species-temperature-or-sign-subset</code>	Selecting only convenient values conceals blanks and opposite orientations.
extension	<code>one-relation-with-depth-independent-shared-state-extension</code>	<code>new-coefficient-per-added-constituent</code>	A new coefficient per constituent destroys zero-parameter closure.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
