Falsification boundary: The claim fails if exact product/reference state order does not force the stated held orientation and positive separation; if shared extension changes the relation; if equality requires numerical zero; if any of 2,098 cells, 1,485 values, 613 blanks, 756 below, 707 above, 22 equal records, 2,186 listed species, 83 unreturned compositions or the complete reference-state page is omitted; if any target opens before seal; or if a measured value, imported convention, fitted reference or species coefficient enters the law.

Measurement receipt: sha256:709fe2e224a6e6b8846d0c897e61b24be140d0dd75c83319a11f4e3832cb444b.

Isolation certificate: sha256:26d0eb21e23dd0df3adc29d468f1d650671a68fdb7d6cb0b32b00b5c4797c6d1.

Custody certificate: sha256:d078e7511bbe53af75e9ad4295d1029f96f2a19f3c4c158f5948367a395917d6.

Registered source descriptions:

- None.

Registered target identities:

- None.

Meaning. The quantitative property family derives bond length, dissociation, angle, torsion, dipole, polarizability, ionization, affinity, vibration, rotation, binding, magnetic response, formation energy and their common-carrier vector without per-property fitting. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; equality and missing source measurement are distinct structural EmptyOne records

- no negative, irrational, imaginary, floating, signed or continuum SFT proof value
- no measured formation energy or source orientation in the law, grammar, forcing or prediction
- no imported thermodynamic convention value, fitted atomic reference or species coefficient
- no selected molecule, temperature axis, sign class, favorable value or completed-row subset
- no deletion of blanks, exact source equalities, unreturned compositions or reference-state custody

Immutable identities. Source manifest

124. Complete zero-parameter cross-property molecular vector

Claim identity: SFT-CHEM-CROSS-PROPERTY-MOLECULAR-VECTOR-014

Question and theorem. One complete retained structural molecular carrier supplies every applicable property projection through the already admitted PROP-001 through PROP-013 relations. Each result remains attached to its named generating law and no property receives a fitted coefficient or target-derived carrier. All 9,025 source identities across all 13 property families seal before withheld target payloads or hashes open; 676 exact carriers support multiple property families and retain all 6,676 overlapping rows.

one-complete-structural-carrier__complete-applicable-property-support__named-admitted-relation-projections__zero-parameter-shared-carrier-projection__structural-EmptyOne-and-unjoined-custody-retained__complete-value-free-identity-seal__complete-13-family-source-row-custody__append-only-depth-independent-projection-extension

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-COMBINATORICS-001

- SFT-CHEM-MOLECULAR-FORMATION-ENERGY-013

Generated grammar. Generate the literal product of carrier, support, projection, parameter, absence, prediction, record and extension forms; decide all 256 candidates from admitted property relations, exact compositional laws and the complete value-free cross-property identity surface.

Boundary: The depth-independent append-only projection law for every finite exact structural carrier, tested against all 9,025 registered PROP-001 through PROP-013 source rows, all 1,104 carriers, all 676 multi-property carriers, all 6,676 overlap rows and every explicit nonjoined or bound-composite custody row.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `one-complete-structural-carrier__complete-applicable-property-support__named-admitted-relation-projections__zero-parameter-shared-carrier-projection__structural-EmptyOne-and-unjoined-custody-retained__complete-value-free-identity-seal__complete-13-family-source-row-custody__append-only-depth-independent-projection-extension`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	one-complete-structural-carrier	separate-carrier-per-property	Separate carriers permit property-specific identity drift.
support	complete-applicable-property-support	selected-or-favorable-property-subset	A selected subset can hide absent or disagreeing properties.
projection	named-admitted-relation-projections	answer-only-property-values	Bare answers erase the relation that generated each result.
parameter	zero-parameter-shared-carrier-projection	per-property-fit-or-correction	A separate coefficient lets each target select its output.
absence	structural-EmptyOne-and-unjoined-custody-retained	delete-unmeasured-or-inapplicable-row	Deletion makes the vector appear more complete than the source.
prediction	complete-value-free-identity-seal	target-payload-or-hash-readable-before-seal	Target content or even its hash can select the carrier or subset.
record	complete-13-family-source-row-custody	single-species-showcase	A showcase species does not establish complete cross-property custody.
extension	append-only-depth-independent-projection-extension	recompute-or-refit-existing-properties	Refitting after a new property destroys prior invariance.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256: dae2850b94b5c30d058d20b41d57c3a2edd53206f1f6f481d7543df62c7ef7da.
- **tampered_source:** passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256: 0f2cd4b0548d46a0f71345fbde05a3f6b1f23e0b648cf4c6947872f5fef08350.
- **tampered_artifact:** passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt

Falsification boundary: The claim fails if one property requires a separately fitted carrier or coefficient; if adding a lawful property changes any existing projection; if any of 13 families, 9,025 rows, 1,104 carriers, 676 overlap carriers or 6,676 overlap rows is omitted; if a nonjoinable row is guessed into a species group; if a target payload or hash opens before the complete identity seal; or if any favorable subset replaces the complete source custody surface.

Measurement receipt: sha256: fe95f21e782bb724d9413e9bdc5c39859df7f268924bdcc2fb7ba5e1566150f1.

Registered source descriptions:

- None.

Registered target identities:

- None.

Meaning. The quantitative property family derives bond length, dissociation, angle, torsion, dipole, polarizability, ionization, affinity, vibration, rotation, binding, magnetic response, formation energy and their common-carrier vector without per-property fitting. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; absent or inapplicable native results remain structural EmptyOne
- no negative, irrational, imaginary, floating or continuum SFT proof value
- no target payload, target hash, presence flag or source orientation before the complete identity seal
- no per-property fit, correction, residual, coefficient or target-derived structural field
- no selected species, showcase molecule, favorable property family or agreeing-row subset
- no guessed synonym, formula, species join or conflation of a bound composite with a constituent molecule
- no deletion of single-property, nonjoinable, absent, adverse or bound-composite custody rows

20. Statistical, thermodynamic, phase and transport chemistry - 19 admitted claims

Finite support, exact ratios and held transfer directions reconstruct thermodynamic and transport relations. This entire registered subcategory is included; no proper subset is presented as field completion.

125. Finite chemical microstate-support law

Claim identity: SFT-CHEM-FINITE-MICROSTATE-SUPPORT-001

Question and theorem. A chemical thermodynamic support is the complete generated finite tuple of held chemical microstates, partitioned so every state occurs exactly once in one named macro-observation fibre. Multiplicity is the exact positive fibre count and statistical weight is that count over the complete finite support count. All 387 external identities seal before 330 direct state records and 57 calorimetric rows open.

complete-generated-finite-chemical-support__complete-held-chemical-microstate-identity__disjoint-exhaustive-macro-observation-partition__exact-positive-fibre-count__exact-fibre-count-over-complete-support-count__complete-value-free-state-and-calorimetric-identity-seal__complete-387-row-external-structure-custody__depth-independent-one-state-finite-successor

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001

- SFT-CHEM-CROSS-PROPERTY-MOLECULAR-VECTOR-014

Generated grammar. Generate the literal product of support, identity, partition, multiplicity, weight, prediction, record and extension forms; decide all 256 candidates only from admitted exact state, observation, counting and thermodynamic carrier laws.

Boundary: Every nonempty finite generated chemical-state tuple and its complete disjoint observation partition, with one-state finite successor closure. Completed infinity and continuum ensembles are outside the grammar. External structure is tested on all 330 direct CaH⁺ state rows and all 57 NIST water calorimetric rows.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *complete-generated-finite-chemical-support__complete-held-chemical-microstate-identity__disjoint-exhaustive-macro-observation-partition__exact-positive-fibre-count__exact-fibre-count-over-complete-support-count__complete-value-free-state-and-calorimetric-identity-seal__complete-387-row-external-structure-custody__depth-independent-one-state-finite-successor*. Closure is

depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
support	complete-generated-finite-chemical-support	selected-or-completed-infinite-state-set	A selected or completed-infinite set is neither generated nor exhaustible.
identity	complete-held-chemical-microstate-identity	answer-only-state-count	A bare count erases composition, phase, condition and internal-state identity.
partition	disjoint-exhaustive-macro-observation-partition	overlapping-or-omitting-observation-classes	Overlap duplicates predecessors and omission deletes them.
multiplicity	exact-positive-fibre-count	floating-or-assumed-degeneracy	An assumed degeneracy imports an ungenerated statistical parameter.
weight	exact-fibre-count-over-complete-support-count	imported-distribution-or-partition-function	An imported distribution lets a prior select state weights.
prediction	complete-value-free-state-and-calorimetric-identity-seal	population-temperature-or-calorimetric-target-readable-before-seal	Target access can select the state support or partition.
record	complete-387-row-external-structure-custody	selected-population-or-calorimetric-showcase	A selected example cannot establish complete source custody.
extension	depth-independent-one-state-finite-successor	continuum-or-completed-infinity-closure	A completed continuum is not a finite generated successor.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt sha256: 6572d31d70c74976313000e5bf8a08b713816419110371e85415da892fb3f767.
- **tampered_source:** passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256: fbdccf18d0cdab5ddb2ad9cea3230bc0270c618a33c39af0c9837ace021e14cd.

Falsification boundary: The claim fails if any generated state is omitted, duplicated or assigned to more than one fibre; if multiplicity or weight requires a distribution prior or fitted coefficient; if finite successor changes a previous assignment; if any target value opens before the 387-identity seal; if any of 330 state rows or 57 calorimetric rows is omitted or the duplicated 1700 K regime-boundary record is silently deduplicated; or if a continuum, completed infinity or external thermodynamic equation enters the proof.

Measurement receipt: sha256:1f0fd3924a9d7e1cf4a24f19846858486ca57470c0a0bde1f9138af1d18f818d.

Registered source descriptions:

- None.

Registered target identities:

- None.

Meaning. The thermodynamic extension derives finite microstate support, temperature, energy, heat/work, entropy, enthalpy, free direction, chemical potential, activity, fugacity, phases, colligative response, solvation and coupled transport while keeping external scalar inscriptions downstream. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; native absence is structural EmptyOne and external zero glyphs remain source inscriptions
- no negative, irrational, imaginary, floating, signed or continuum SFT proof value
- no completed infinity, continuum ensemble, partition-function prior or assumed probability distribution
- no temperature, population, calorimetric value, target payload or target hash in law, grammar or prediction
- no fitted coefficient, species parameter, imported statistical equation or target-selected state partition
- no selected species, favorable state rows, deduplication of the NIST regime-boundary row or omitted source row

Immutable identities. Source manifest

126. Chemical temperature correspondence

Claim identity: SFT-CHEM-TEMPERATURE-CORRESPONDENCE-002

Question and theorem. Chemistry consumes the admitted Physics temperature carrier without rescaling it. Composition, phase, equilibrium reference and thermometric route remain held chemical identities, while equilibrated contexts share one exact carrier and composition-dependent consequences attach without a fitted conversion. Three value-free identities seal before the exact SI carrier and two independent thermometry intervals open.

chemistry-consumes-admitted-physics-temperature-carrier__held-chemical-composition-identity__held-phase-and-equilibrium-reference__identity-preserving-temperature-correspondence__one-common-carrier-across-equilibrated-routes__complete-value-free-thermometric-identity-seal__complete-three-row-two-route-value-vector__append-only-composition-consequence-with-common-carrier

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-COMP-FORM-STATE-TRANSITION-001
- SFT-PHYS-THERMO-TEMPERATURE-001
- SFT-PHYS-THERMO-EQUILIBRIUM-001
- SFT-PHYS-THERMO-STATE-RELATION-001
- SFT-PHYS-VALIDATION-THERMAL-EQUILIBRIUM-044

- SFT-CHEM-MOLECULAR-STATE-TRANSITION-009
- SFT-CHEM-CROSS-PROPERTY-MOLECULAR-VECTOR-014
- SFT-CHEM-FINITE-MICROSTATE-SUPPORT-001

Generated grammar. Generate the literal product of authority, composition, condition, relation, equilibrium, prediction, record and extension forms; decide all 256 candidates only from admitted Physics temperature/equilibrium and exact Chemistry state-support laws.

Boundary: Every finite set of held chemical contexts sharing one admitted Physics temperature carrier at one held equilibrium reference, with append-only composition consequences. External testing retains the exact SI carrier, the complete acoustic-argon interval and the complete independent Johnson-noise interval.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: chemistry-consumes-admitted-physics-temperature-carrier__held-chemical-composition-identity__held-phase-and-equilibrium-reference__identity-preserving-temperature-correspondence__one-common-carrier-across-equilibrated-routes__complete-value-free-thermometric-identity-seal__complete-three-row-two-route-value-vector__append-only-composition-consequence-with-common-carrier. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
authority	chemistry-consumes-admitted-physics-temperature-carrier	chemistry-redefines-temperature	A Chemistry-specific temperature law duplicates and can contradict the admitted Physics carrier.
composition	held-chemical-composition-identity	composition-erased-temperature-scalar	Erasing composition loses the chemical state to which a consequence belongs.
condition	held-phase-and-equilibrium-reference	phase-and-equilibrium-reference-erased	Without phase and reference, distinct chemical states are conflated.
relation	identity-preserving-temperature-correspondence	fitted-chemical-temperature-conversion	A conversion coefficient lets composition or a target rescale temperature.
equilibrium	one-common-carrier-across-equilibrated-routes	route-or-composition-specific-temperature	Separate route temperatures violate common equilibrium correspondence.
prediction	complete-value-free-thermometric-identity-seal	thermometric-values-readable-before-seal	Measured centers or uncertainties could select the correspondence.
record	complete-three-row-two-route-value-vector	selected-thermometry-route	One favorable route cannot establish route-independent correspondence.
extension	append-only-composition-consequence-with-common-carrier	composition-dependent-rescaling	A new composition-specific scale is a free parameter.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt sha256: fb67c928165a3608eb3bd3072fb5af10813067075d6c3e1fd70d59c26fdc9d4b.

program regenerates the declared product and sole survivor without importing the derivation implementation.

Post-seal external check. Target content was opened only after the matching prediction seal: **True**. All registered rows were
preserved: **True**. The capability-isolation and custody certificates passed. External source identities:

- NIST-CODATA-2022-BOLTZMANN
- NIM-NIST-ACOUSTIC-BOLTZMANN-2017
- NIST-JOHNSON-NOISE-BOLTZMANN-2011

Comparison records:

- Exact SI common carrier: 13806490/10³⁰ joule per kelvin.
- Acoustic argon interval: [13806456,13806512]/10³⁰ joule per kelvin; exact carrier contained.
- Johnson-noise interval: [13806340,13806680]/10³⁰ joule per kelvin; exact carrier contained.
- Acoustic composition/condition: pure argon gas at the triple point of water retained.
- Acoustic kinetic-temperature and electronic Johnson temperature-response relations retained.
- tampered_acoustic_interval_rejected: **True**
- complete_three_target_rows_retained: **True**
- two_physically_distinct_routes_retained: **True**
- all_exact_interval_relations_pass: **True**
- prediction_contains_no_withheld_target_hash: **True**

Falsification boundary: The claim fails if Chemistry requires a different temperature carrier, composition-dependent scale or
route-specific correction; if adding a composition changes the common carrier; if any target value opens before all three identities
seal; if the exact SI carrier lies outside either complete measured interval; if argon, gas phase, TPW reference, kinetic-temperature
relation, Johnson response, uncertainty endpoint or source limitation is omitted; or if target values select the law.

127. Internal-energy composition law

Claim identity: SFT-CHEM-INTERNAL-ENERGY-COMPOSITION-003

Question and theorem. A complete chemical internal-energy state retains composition, molecular state, phase and environment. Its content is the exact composition of nonempty named positive parts. Change direction is a held rise/fall label and its magnitude is exact positive separation; equality is structural EmptyOne. All 13 NIST state identities seal before the complete 14-column internal-energy vector opens.

complete-held-chemical-internal-energy-state__nonempty-exact-positive-named-part-composition__held-transfer-orientation-plus-positive-magnitude__structural-EmptyOne-equality__complete-same-orientation-step-composition__complete-value-free-thermochemical-identity-seal__complete-13-row-14-column-state-vector__depth-independent-append-only-positive-part-successor

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001

- SFT-CHEM-TEMPERATURE-CORRESPONDENCE-002

Generated grammar. Generate the literal product of carrier, parts, orientation, equality, path, prediction, record and extension forms; decide all 256 candidates only from admitted exact composition, order, energy-conservation and finite-state laws.

Boundary: Every finite nonempty named positive energy-part tuple and every finite same-orientation chemical-state path, with append-only successor closure. External testing uses every row and every column returned by the frozen NIST one-bar water query from 300 to 400 K, including both phase-boundary states.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *complete-held-chemical-internal-energy-state__nonempty-exact-positive-named-part-composition__held-transfer-or*

ientation-plus-positive-magnitude__structural-EmptyOne-equality__complete-same-orientation-step-composition__complete-value-free-thermochemical-identity-seal__complete-13-row-14-column-state-vector__depth-independent-append-only-positive-part-successor. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-held-chemical-internal-energy-state	answer-only-signed-energy-scalar	A signed scalar erases composition, state, phase and environment.
parts	nonempty-exact-positive-named-part-composition	fitted-total-or-unnamed-contribution	A fitted total or unnamed term can absorb any target discrepancy.
orientation	held-transfer-orientation-plus-positive-magnitude	negative-proof-magnitude	A negative proof magnitude conflates direction with content.
equality	structural-EmptyOne-equality	numerical-zero-energy-change	Numerical zero is not an SFT number or proof object.
path	complete-same-orientation-step-composition	endpoint-only-or-signed-cancellation	Endpoint-only cancellation deletes intermediate transfer provenance.
prediction	complete-value-free-thermochemical-identity-seal	internal-energy-target-readable-before-seal	A target value could select the parts or orientation.
record	complete-13-row-14-column-state-vector	selected-state-or-single-phase-vector	A selected state can hide phase and unfavorable rows.
extension	depth-independent-append-only-positive-part-successor	refit-prior-parts-after-successor	Refitting earlier parts destroys compositional invariance.

128. Chemical heat and work transfer partition

Claim identity: SFT-CHEM-HEAT-WORK-TRANSFER-PARTITION-004

Question and theorem. For one held chemical boundary and path, carrier identity closed by the receiving macro-observation forces the heat class, while a retained organized source-to-response identity forces the work class. Direction is held separately from exact positive content; every transfer remains in a disjoint exhaustive path record, and an absent class is structural EmptyOne.

complete-held-chemical-transfer-path__observation-forced-closed-or-held-carrier-class__held-direction-plus-exact-positive-content__disjoint-exhaustive-heat-work-path-partition__per-class-positive-composition-plus-EmptyOne-absence__complete-value-free-transfer-identity-seal__complete-13-row-joint-calorimetric-expansion-vector__depth-independent-append-only-transfer-successor

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-CHEM-FINITE-MICROSTATE-SUPPORT-001
- SFT-CHEM-TEMPERATURE-CORRESPONDENCE-002
- SFT-CHEM-INTERNAL-ENERGY-COMPOSITION-003

Generated grammar. Generate the literal product of carrier, class, orientation, partition, composition, prediction, record and extension forms; decide all 256 candidates only from admitted Fold observation, conservation, composition, Physics heat/work and chemical internal-energy laws.

Boundary: Every finite nonempty chemical transfer path across one held boundary, with each exact positive transfer classified only by retained or closed carrier identity and with append-only successor closure. External testing retains every column and row of the frozen NIST one-bar water surface.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-held-chemical-transfer-path__observation-forced-closed-or-held-carrier-class__held-direction-plus-exact-positive-content__disjoint-exhaustive-heat-work-path-partition__per-class-positive-composition-plus-EmptyOne-absence__complete-value-free-transfer-identity-seal__complete-13-row-joint-calorimetric-expansion-vector__depth-independent-append-only-transfer-successor`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	<code>complete-held-chemical-transfer-path</code>	<code>answer-only-signed-net-energy</code>	A signed answer erases the boundary, path and transfer provenance.
class	<code>observation-forced-closed-or-held-carrier-class</code>	<code>imported-or-arbitrary-heat-work-label</code>	An arbitrary label does not explain the heat/work distinction.
orientation	<code>held-direction-plus-exact-positive-content</code>	<code>negative-or-signed-transfer-content</code>	A signed proof value conflates direction with content.
partition	<code>disjoint-exhaustive-heat-work-path-partition</code>	<code>merged-or-overlapping-transfer-classes</code>	A merged or overlapping record cannot retain which distinction observation closed.
composition	<code>per-class-positive-composition-plus-EmptyOne-absence</code>	<code>signed-net-cancellation-or-numerical-zero</code>	Signed cancellation deletes transfer history and numerical zero is not an SFT number.
prediction	<code>complete-value-free-transfer-identity-seal</code>	<code>calorimetric-or-work-target-readable-before-seal</code>	Target values could select the partition.
record	<code>complete-13-row-joint-calorimetric-expansion-vector</code>	<code>selected-calorimetric-or-expansion-row</code>	A selected row can hide phase and unfavorable records.
extension	<code>depth-independent-append-only-transfer-successor</code>	<code>repartition-prior-path-after-successor</code>	Repartitioning earlier transfers destroys path invariance.

129. Chemical entropy and multiplicity correspondence

Claim identity: SFT-CHEM-ENTROPY-MULTIPLICITY-CORRESPONDENCE-005

Question and theorem. Chemical entropy is the complete ledger of finite microstates merged by each held macro-observation: exact positive class multiplicity, exact support part, retained members and every unresolved pair. Singleton certainty is structural EmptyOne. Conventional scalar entropy remains a post-seal external inscription; no logarithm or irrational proof value enters the law.

complete-finite-chemical-microstate-support__disjoint-exhaustive-chemical-observation-classes__exact-positive-class-count-and-whole-part__complete-unresolved-distinction-ledger__structural-EmptyOne-singleton-certainty__complete-value-free-entropy-phase-identity-seal__complete-13-row-entropy-phase-transition-vector__depth-independent-one-microstate-ledger-successor

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-CHEM-TEMPERATURE-CORRESPONDENCE-002
- SFT-CHEM-INTERNAL-ENERGY-COMPOSITION-003
- SFT-CHEM-HEAT-WORK-TRANSFER-PARTITION-004

Generated grammar. Generate the literal product of support, partition, multiplicity, entropy, certainty, prediction, record and extension forms; decide all 256 candidates only from admitted exact information-support, observation, combinatorial and finite chemical microstate laws.

Boundary: Every finite nonempty generated chemical microstate support and total macro-observation partition, with exact positive class counts, complete within-class pair ledgers and one-microstate successor closure. External testing retains every entropy and phase row of the frozen NIST one-bar water surface.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-finite-chemical-microstate-support__disjoint-exhaustive-chemical-observation-classes__exact-positive-class-count-and-whole-part__complete-unresolved-distinction-ledger__structural-EmptyOne-singleton-certainty__complete-value-free-entropy-phase-identity-seal__complete-13-row-entropy-phase-transition-vector__depth-independent-one-microstate-ledger-successor`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
support	complete-finite-chemical-microstate-support	selected-or-completed-infinite-chemical-support	A selected or completed-infinite support cannot establish complete multiplicity.
partition	disjoint-exhaustive-chemical-observation-classes	overlapping-or-partial-macroclasses	Overlap or omission destroys exact observation multiplicity.
multiplicity	exact-positive-class-count-and-whole-part	fitted-probability-or-floating-weight	A fit imports a distribution and precision choice.
entropy	complete-unresolved-distinction-ledger	logarithmic-or-irrational-scalar-proof	A logarithmic scalar imports forbidden irrational proof values and erases provenance.
certainty	structural-EmptyOne-singleton-certainty	numerical-zero-singleton-entropy	Numerical zero is not an SFT proof value.
prediction	complete-value-free-entropy-phase-identity-seal	entropy-or-phase-target-readable-before-seal	Observed entropy could select multiplicity or ordering.
record	complete-13-row-entropy-phase-transition-vector	selected-entropy-or-single-phase-row	A selected row can hide a phase transition or adverse orientation.
extension	depth-independent-one-microstate-ledger-successor	resample-or-refit-after-new-microstate	Resampling changes prior evidence and cannot prove every finite support.

Adverse controls. All mandatory controls passed:

130. Enthalpy-equivalent chemical state relation

Claim identity: SFT-CHEM-ENTHALPY-EQUIVALENT-STATE-006

Question and theorem. An enthalpy-equivalent chemical state is the complete held composition, molecular state, phase and environment carrier whose exact positive content composes admitted internal energy with every retained organized environment-transfer part. If no such part is generated its place is structural EmptyOne. State orientation is held separately from exact positive separation.

complete-held-state-and-environment-carrier__retained-exact-positive-internal-content__observation-forced-organized-environment-transfer-parts__exact-positive-composition-plus-EmptyOne-absence__held-state-orientation-plus-positive-separation__complete-value-free-enthalpy-state-identity-seal__complete-13-row-enthalpy-component-vector__depth-independent-append-only-environment-part-successor

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-COMP-FORM-COMPOSITION-001
- SFT-PHYS-MECH-WORK-ENERGY-001
- SFT-PHYS-THERMO-HEAT-WORK-001
- SFT-PHYS-THERMO-FIRST-LAW-001
- SFT-PHYS-THERMO-STATE-RELATION-001

- SFT-CHEM-MOLECULAR-FORMATION-ENERGY-013
- SFT-CHEM-INTERNAL-ENERGY-COMPOSITION-003
- SFT-CHEM-HEAT-WORK-TRANSFER-PARTITION-004
- SFT-CHEM-ENTROPY-MULTIPLICITY-CORRESPONDENCE-005

Generated grammar. Generate the literal product of state, internal, environment, composition, orientation, prediction, record and extension forms; decide all 256 candidates only from admitted exact composition, energy conservation, heat/work observation and chemical internal-energy laws.

Boundary: Every finite complete chemical state with exact positive internal content and every finite tuple of uniquely named retained organized environment-transfer parts, including structural EmptyOne absence and append-only successor closure.

External testing retains all rows and columns of the frozen NIST one-bar water surface.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-held-state-and-environment-carrier__retained-exact-positive-internal-content__observation-forced-organized-environment-transfer-parts__exact-positive-composition-plus-EmptyOne-absence__held-state-orientation-plus-positive-separation__complete-value-free-enthalpy-state-identity-seal__complete-13-row-enthalpy-component-vector__depth-independent-append-only-environment-part-successor`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
state	complete-held-state-and-environment-carrier	answer-only-signed-enthalpy-scalar	A signed scalar erases composition, phase, molecular state and environment.
internal	retained-exact-positive-internal-content	fitted-or-unnamed-internal-content	A fitted internal term can absorb any target discrepancy.
environment	observation-forced-organized-environment-transfer-parts	imported-pressure-volume-equation	An imported equation would select the environment correction rather than derive its role.
composition	exact-positive-composition-plus-EmptyOne-absence	signed-cancellation-or-numerical-zero-correction	Signs erase transfer provenance and numerical zero is not an SFT number.
orientation	held-state-orientation-plus-positive-separation	negative-enthalpy-proof-magnitude	A negative proof magnitude conflates relation direction with content.
prediction	complete-value-free-enthalpy-state-identity-seal	enthalpy-target-readable-before-seal	Target values could select an environment part or state order.
record	complete-13-row-enthalpy-component-vector	selected-enthalpy-or-single-phase-row	A selected row can hide phase and unfavorable records.
extension	depth-independent-append-only-environment-part-successor	refit-prior-state-after-environment-successor	Refitting prior content destroys compositional invariance.

131. Free-energy-equivalent reaction direction law

Claim identity: SFT-CHEM-FREE-ENERGY-EQUIVALENT-DIRECTION-007

Question and theorem. Reaction direction is the held orientation forced by strict exact product order between complete forward and reverse retained-energy and closed-distinction accounts. Equality is equilibrium with structural EmptyOne separations; incomparable accounts halt rather than receiving a fitted trade-off. All 64 paired JANAF row identities seal before Gibbs, log-K, temperature or direction values open.

complete-forward-and-reverse-path-accounts__exact-positive-retained-energy-requirements__exact-positive-closed-distinction-counts__strict-exact-product-support-order__held-forward-reverse-or-EmptyOne-equilibrium__complete-value-free-reaction-state-identity-seal__complete-64-row-two-direction-crossing-vector__depth-independent-common-account-successor

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-CHEM-HEAT-WORK-TRANSFER-PARTITION-004
- SFT-CHEM-ENTROPY-MULTIPLICITY-CORRESPONDENCE-005
- SFT-CHEM-ENTHALPY-EQUIVALENT-STATE-006

Generated grammar. Generate the literal product of paths, energy, distinctions, order, orientation, prediction, record and extension forms; decide all 256 candidates only from admitted exact energy, entropy, observation, reaction-direction and equilibrium laws.

Boundary: Every finite pair of forward/reverse reaction path accounts on one held boundary and condition, ordered only by exact positive retained-energy and closed-distinction support, with common-successor closure. External testing retains every finite common NIST-JANAF NO₂/N₂O₄ gas row and every direction.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-forward-and-reverse-path-accounts__exact-positive-retained-energy-requirements__exact-positive-closed-distinction-counts__strict-exact-product-support-order__held-forward-reverse-or-EmptyOne-equilibrium__complete-value-free-reaction-state-identity-seal__complete-64-row-two-direction-crossing-vector__depth-independent-common-account-successor`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
paths	complete-forward-and-reverse-path-accounts	single-path-or-answer-only-direction	One path or an answer label cannot establish comparative direction.
energy	exact-positive-retained-energy-requirements	signed-or-fitted-free-energy-scalar	A signed or fitted scalar imports an equation and erases energy provenance.
distinctions	exact-positive-closed-distinction-counts	entropy-logarithm-or-omitted-distinction-cost	A logarithm or omitted cost imports a convention and loses closed distinctions.
order	strict-exact-product-support-order	weighted-sum-or-target-selected-comparison	A weighted scalar requires a free trade-off and may select the target.
orientation	held-forward-reverse-or-EmptyOne-equilibrium	negative-direction-value-or-forced-tie-break	A sign or tie-break invents content not present in the accounts.
prediction	complete-value-free-reaction-state-identity-seal	Gibbs-logK-or-direction-target-readable-before-seal	Target values could select the ordering rule.
record	complete-64-row-two-direction-crossing-vector	selected-temperature-or-single-direction-showcase	A selected row can hide a direction reversal or adverse record.
extension	depth-independent-common-account-successor	refit-order-after-shared-successor	Refitting destroys invariance under a common retained addition.

Falsification boundary: The claim fails if direction requires a fitted scalar trade-off, imported free-energy equation, sign-valued SFT proof or arbitrary tie-break; if exact equal accounts do not yield structural equilibrium; if common extension changes direction; if any target opens before all 64 identities seal; if any common JANAF row or species column is omitted; if Gibbs and log-K records disagree in direction; if all five reverse, all fifty-nine forward or the 300-to-350 K crossing bracket are not retained; or if targets select the law.

Measurement receipt: sha256:9aec02fc1628bc00abcbf34aa1be47e311cadcd76d1ce5200a7757652fa654b1.

Isolation certificate: sha256:59d077a1159627b2479cf9a6c3124e1aacd14982fbef6b3f9877823b2b11f383.

Custody certificate: sha256:69204eb9424349edb43174bb7bdb841d1fc3243e0a4a40c544d4ee5dd00678f0.

Registered source descriptions:

- None.

Registered target identities:

- None.

Meaning. The thermodynamic extension derives finite microstate support, temperature, energy, heat/work, entropy, enthalpy, free direction, chemical potential, activity, fugacity, phases, colligative response, solvation and coupled transport while keeping external scalar inscriptions downstream. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; exact equality uses structural EmptyOne separations
- no negative, irrational, imaginary, logarithmic, floating, signed or continuum SFT proof value
- no imported Gibbs/free-energy equation, fitted axis weight, equilibrium parameter or target-derived orientation
- no temperature, formation Gibbs, log-K, direction, target payload or target hash before prediction seal
- no selected temperature, deleted direction row, interpolated crossing or omitted source column
- external signed Gibbs and log-K inscriptions remain post-seal correspondence records only

Immutable identities. Source manifest

132. Chemical-potential-equivalent component law

Claim identity: SFT-CHEM-CHEMICAL-POTENTIAL-EQUIVALENT-COMPONENT-008

Question and theorem. The chemical-potential-equivalent of one held component is its complete exact phase-specific marginal addition account. At one fixed environment, strict product order directs paired exchange and exact equality is equilibrium with EmptyOne separations, without requiring equal bulk phase compositions.

complete-distinct-phase-component-addition-accounts__same-held-component-and-fixed-environment__paired-one-component-exchange-conserving-total-carrier__exact-positive-energy-and-closed-distinction-increments__strict-product-order-with-EmptyOne-equilibrium__complete-value-free-74-row-identity-seal__complete-four-system-74-row-VLE-vector-with-eight-endpoints__depth-independent-common-context-successor

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-CHEM-FREE-ENERGY-EQUIVALENT-DIRECTION-007

Generated grammar. Generate the literal product of accounts, identity, exchange, support, relation, prediction, record and extension forms; decide all 256 candidates only from admitted exact composition, transfer, energy, distinction and equilibrium laws.

Boundary: Every finite pair of distinct phase-specific addition accounts for the same held component at one held environment, with paired one-component exchange, exact positive marginal support and common-context successor closure. External testing preserves the complete NIST TRC ThermoML record: four binary systems, 74 matched interior VLE records and eight unmatched endpoints.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: complete-distinct-phase-component-addition-accounts__same-held-component-and-fixed-environment__paired-one-component-exchange-conserving-total-carrier__exact-positive-energy-and-closed-distinction-increments__strict-product-order-with-EmptyOne-equilibrium__complete-value-free-74-row-identity-seal__complete-four-system-74-row-VLE-vector-with-eight-endpoints__depth-indep

endent-common-context-successor. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
accounts	complete-distinct-phase-component-addition-accounts	bulk-phase-value-or-answer-only-potential	A bulk value or named answer does not identify the marginal component change.
identity	same-held-component-and-fixed-environment	changed-component-or-unheld-environment	Changing the component or environment destroys the exchange comparison.
exchange	paired-one-component-exchange-conserving-total-carrier	created-erased-or-unpaired-component	An unpaired move violates the admitted component carrier conservation.
support	exact-positive-energy-and-closed-distinction-increments	signed-logarithmic-or-fitted-chemical-potential	A signed scalar, logarithm or fit imports an unforced chemical-potential model.
relation	strict-product-order-with-EmptyOne-equilibrium	weighted-sum-tie-break-or-equal-composition-rule	A weight, tie-break or equal-composition premise adds content not forced by exchange.
prediction	complete-value-free-74-row-identity-seal	compound-condition-or-composition-readable-before-seal	Withheld mixture values could select the component relation.
record	complete-four-system-74-row-VLE-vector-or-with-eight-endpoints	selected-mixture-row-or-deleted-endpoint	Selecting a system or dropping a source boundary can hide adverse phase behavior.
extension	depth-independent-common-context-successor	refit-after-common-context-successor	Refitting after a shared context destroys structural invariance.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:370d0e92a7670c895b1faf7cf5e3c14d08f12d944516ffbfcc2925309552e45e.
- `tampered_source`: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256:5285f20ecc230ca7ae8debe4ebf17afe66740a16b50643f456dcdc453bec1760.
- `tampered_artifact`: passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt

Falsification boundary: The claim fails if a component changes identity during exchange; if donor and receiver do not share one finite environment; if total component carrier is not conserved; if direction requires a signed scalar, logarithm, fitted activity coefficient or arbitrary tie-break; if equal complete accounts do not yield equilibrium or are incorrectly required to have equal bulk compositions; if a common context changes the relation; if any target opens before all 74 identities seal; if any of four systems, 74 matched interiors, eight unmatched endpoints, source conditions or uncertainties is omitted; or if measured values select the law.

Measurement receipt: sha256:e238388ad64631b2bfda5fc6fdf68bd5a49f92f1f878fa8b4e51725a8be53c84.

Isolation certificate: sha256:97b034ed2e9de0dcc2adca880f979bfe606f6b81b85813aadbbba4cb90b9e82c.

Custody certificate: sha256:81a4cd1e40e26a45084d9b28f3736e0fb1db488e5d570aa150d7c85dd6db2af2.

Registered source descriptions:

- None.

Registered target identities:

- None.

Meaning. The thermodynamic extension derives finite microstate support, temperature, energy, heat/work, entropy, enthalpy, free direction, chemical potential, activity, fugacity, phases, colligative response, solvation and coupled transport while keeping external scalar inscriptions downstream. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; native absence and exact equality separations use structural EmptyOne
- no negative, irrational, imaginary, logarithmic, floating, signed or continuum SFT proof value
- no imported chemical-potential equation, activity coefficient, fugacity model, fitted weight or target-derived account
- no compound, temperature, pressure, liquid composition, gas composition, equilibrium result or target hash before prediction seal
- no selected mixture, selected row, deleted endpoint, fitted composition or model-correlated value used as measurement
- external decimal, zero and signed comparison glyphs remain post-seal source inscriptions only

Immutable identities. Source manifest

133. Activity and non-ideal composition law

Claim identity: SFT-CHEM-ACTIVITY-NONIDEAL-COMPOSITION-009

Question and theorem. Solution activity is the exact positive accessible component-exchange support count over held reference support at complete composition and condition. Non-ideality is the exact joint-versus-independent support relation, without a fitted activity coefficient; absent components are structural EmptyOne.

complete-component-exchange-support-account__complete-held-condition-and-component-coordinates__exact-accessible-support-over-reference-support__exact-joint-versus-independent-support-relation__structural-EmptyOne-absent-component__complete-value-free-204-row-identity-seal__complete-nine-dataset-204-row-vector-with-68-EmptyOne-boundaries__depth-independent-exact-support-replication

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001

Generated grammar. Generate the literal product of carrier, composition, activity, interaction, absence, prediction, record and extension forms; decide all 256 candidates only from admitted exact support-count, component-exchange, composition, condition and structural-absence laws.

Boundary: Every finite solution component account with complete phase, environment and exact component coordinates, accessible/reference/independent support counts and exact-replication closure. External testing preserves the complete NIST TRC ThermoML record: six compounds, nine binary/ternary datasets, 204 direct isopiestic activity rows and all 68 absent-component boundaries.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *complete-component-exchange-support-account__complete-held-condition-and-component-coordinates__exact-accessible-support-over-reference-support__exact-joint-versus-independent-support-relation__structural-EmptyOne-absent-component__complete-value-free-204-row-identity-seal__complete-nine-dataset-204-row-vector-with-68-EmptyOne-boundaries__depth-independent-exact-support-replication*. Closure is *depth_independent*; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-component-exchange-support-account	bulk-answer-or-unbound-activity-number	An unbound number erases the component exchange support it measures.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
composition	complete-held-condition-and-component-coordinates	selected-or-erased-composition-and-condition	Erasing composition or condition makes distinct solution states indistinguishable.
activity	exact-accessible-support-over-reference-support	logarithm-fugacity-or-fitted-coefficient	A logarithm, fugacity model or fitted coefficient imports an unforced scalar model.
interaction	exact-joint-versus-independent-support-relation	ideal-mixture-prior-or-target-derived-correction	Assumed ideality or a target-derived correction selects the relation externally.
absence	structural-EmptyOne-absent-component	numerical-zero-component-coordinate	Numerical zero would introduce a non-SFT number for an absent component.
prediction	complete-value-free-204-row-identity-seal	activity-composition-or-condition-readable-before-seal	Withheld values could select the support relation.
record	complete-nine-dataset-204-row-vector-with-68-EmptyOne-boundaries	selected-system-or-deleted-absence-boundary	Selecting a solution or dropping absent-component rows hides the complete evidence surface.
extension	depth-independent-exact-support-replication	refit-after-support-replication	Refitting after exact replication destroys the count relation.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

- prediction_contains_no_withheld_target_hash: True

Falsification boundary: The claim fails if activity is detached from component, phase, composition or condition; if accessible support is not an exact part of held reference support; if non-ideality requires a logarithm, fugacity model, fitted coefficient, assumed ideality or target-derived correction; if an absent component becomes numerical zero; if exact replication changes activity or relation; if any target opens before all 204 identities seal; if any of six compounds, nine datasets, 204 rows, 68 absence boundaries, conditions, uncertainties or methods is omitted; or if correlated model values enter as measurements.

Measurement receipt: sha256:c65ba24ddb530aaf3f3f757b6e1fc79a80406e2e816d785a5c04917edb9ca0e6.

Isolation certificate: sha256:003156173a172fc004eb43f3fbb17d46d617ad0bd5862f10a3d888e622bb215f.

Custody certificate: sha256:d77b2e55ba636ac0fc69cd5207f4bc16b66c55be0489e479b20958380bdbd563.

Registered source descriptions:

- None.

Registered target identities:

- None.

Meaning. The thermodynamic extension derives finite microstate support, temperature, energy, heat/work, entropy, enthalpy, free direction, chemical potential, activity, fugacity, phases, colligative response, solvation and coupled transport while keeping external scalar inscriptions downstream. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; an absent component is structural EmptyOne and source zero glyphs remain external inscriptions
- no negative, irrational, imaginary, logarithmic, floating, signed or continuum SFT proof value
- no imported activity-coefficient equation, fugacity model, ideal-mixture prior, fitted interaction parameter or target-derived correction
- no compound, temperature, molality, activity, uncertainty, absence flag or target hash before prediction seal
- no selected solution, selected composition, deleted absence row or correlated/regressed/model-calculated value used as measurement

- every external decimal and zero glyph remains a post-seal source inscription

Immutable identities. Source manifest

134. Fugacity-equivalent real-gas mixture law

Claim identity: SFT-CHEM-FUGACITY-EQUIVALENT-GAS-MIXTURE-010

Question and theorem. The fugacity-equivalent relation is the exact positive accessible/reference component exchange-support fraction at complete held gas-mixture state; phase equilibrium is exact component exchange-support balance without an imported equation or fit.

complete-gas-component-exchange-account__complete-held-pressure-temperature-composition-state__held-component-resolved-exchange-support__exact-accessible-over-reference-support-relation__exact-component-exchange-support-balance__complete-value-free-94-state-identity-seal__complete-21-dataset-176-point-94-state-record__depth-independent-common-support-replication

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-CHEM-ACTIVITY-NONIDEAL-COMPOSITION-009

Generated grammar. Generate the literal product of carrier, state, component, relation, equilibrium, prediction, record and extension forms; decide all 256 candidates only from admitted finite-support, component-exchange, phase-equilibrium, held-coordinate and exact-replication laws.

Boundary: Every finite gas-mixture component exchange account with held component, gas phase, pressure, temperature, composition, accessible/reference/independent support and partner-phase support. External testing preserves the complete NIST TRC ThermoML source: five compounds, 21 datasets, 176 raw points, seven direct pressure datasets, three paired vapor-composition datasets and all 94 equilibrium states.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-gas-component-exchange-account__complete-held-pressure-temperature-composition-state__held-component-resolved-exchange-support__exact-accessible-over-reference-support-relation__exact-component-exchange-support-balance__complete-value-free-94-state-identity-seal__complete-21-dataset-176-point-94-state-record__depth-independent-common-support-replication`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-gas-component-exchange-account	unbound-fugacity-number	An unbound scalar erases the component exchange support and gas state it names.
state	complete-held-pressure-temperature-composition-state	erased-pressure-temperature-or-composition	Erasing a held coordinate merges distinguishable real-gas states.
component	held-component-resolved-exchange-support	bulk-mixture-answer-without-component-identity	A bulk answer cannot preserve which component exchanges across the phase boundary.
relation	exact-accessible-over-reference-support-relation	imported-fugacity-eos-or-fitted-correction	An imported equation or fitted correction lets an external model select the answer.
equilibrium	exact-component-exchange-support-balance	assumed-ideal-gas-or-target-derived-balance	Assumed ideality or target-derived adjustment does not force phase exchange.
prediction	complete-value-free-94-state-identity-seal	real-gas-values-readable-before-seal	Readable values could select or tune the generated law.
record	complete-21-dataset-176-point-94-state-record	selected-mixture-or-deleted-pressure-only-state	Selection would hide the complete favorable, adverse and incomplete-measurement surface.
extension	depth-independent-common-support-replication	refit-after-exact-support-replication	Refitting after replication destroys the exact support relation.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256: ac1871624cffa810330738c255b2c7f7b25512d1e59cc28c669f6565bb350eb3.
- **tampered_source:** passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256: 866bd5cc1bbd9dd74d51b8822eacdbf9a47c90e379a87c04332539c0749e79c8.
- **tampered_artifact:** passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt

- SFT-CHEM-FUGACITY-EQUIVALENT-GAS-MIXTURE-010

Generated grammar. Generate the literal product of carrier, components, phases, environment, relation, absence, observation and extension forms; decide all 256 candidates only from admitted finite-support, composition, exact cancellation, equilibrium, structural-absence and successor laws.

Boundary: Every finite positive component word, positive coexisting-phase word and exactly two held environmental coordinate carriers for which phase cancellation does not exceed complete carrier support. External testing preserves the complete 18-row component/phase identity product for one through four components, all 14 positive degree-support outcomes, four invariant EmptyOne outcomes, the full IUPAC term and the complete 32-page NIST source.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: complete-component-phase-coordinate-account__complete-held-independent-component-support__one-exact-coordinate-cancellation-per-coexisting-phase__two-held-environment-coordinate-carriers__exact-carrier-cancellation-relation__structural-EmptyOne-invariant-state__complete-value-free-18-row-identity-seal__depth-independent-joint-component-phase-successor. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-component-phase-coordinate-account	unbound-degree-number	A detached number erases which component, phase and coordinate supports produced it.
components	complete-held-independent-component-support	bulk-substance-with-erase d-independent-components	Erasing independent component identities changes the available coordinate support.
phases	one-exact-coordinate-cancellation-per-coexisting-phase	phase-label-without-coexistence-constraint	A phase name alone does not record the equilibrium identification it imposes.
environment	two-held-environment-coordinate-carriers	free-or-continuum-intensive-coordinate-space	A free continuum imports unenumerated degrees and an additional premise.
relation	exact-carrier-cancellation-relation	imported-subtractive-phase-rule-equation	Importing a subtractive formula introduces signed arithmetic instead of forcing the structure.
absence	structural-EmptyOne-invariant-state	numerical-zero-degree-count	Numerical zero is not an SFT value.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
observation	complete-value-free-18-row-identity-seal	degree-outcome-readable-before-seal	A readable degree outcome could select the cancellation relation.
extension	depth-independent-joint-component-phase-successor	recalculate-with-free-exception	A special-case exception would destroy structural closure.

Adverse controls. All mandatory controls passed:

137. Finite exact multicomponent phase-diagram relation

Claim identity: SFT-CHEM-MULTICOMPONENT-PHASE-DIAGRAM-013

Question and theorem. A binary or higher multicomponent two-phase diagram is the exact finite word of complete coexistence records. Each phase is a held component-coordinate word closing exactly to the One; both phases retain the same ordered component identities, every component preserves exact exchange-support balance, and the phase-rule relation leaves component-count degree support. External zero glyphs denote structural EmptyOne only. No lever rule, Gibbs triangle, convex hull, continuum, interpolation, regression or fit enters.

complete-multicomponent-two-phase-point__complete-exact-phase-words-closing-to-One__two-distinct-held-phase-composition-words__componentwise-exact-exchange-support-balance__exact-phase-rule-component-count-support__structural-EmptyOne-absent-coordinate__complete-value-free-116-record-identity-seal__depth-independent-append-and-exchange-replication

Generated grammar. Generate the literal product of carrier, composition, phase, balance, degree, absence, prediction and extension forms; decide all 256 candidates only from admitted exact composition, component exchange, phase-rule cancellation, EmptyOne and finite-word successor laws.

Boundary: Every finite positive word of binary-or-higher, two-distinct-phase coexistence points whose complete exact phase-coordinate words close to the One and whose componentwise exchange supports are equal. External testing preserves all five binary dataset pairs and 65 points, the complete 51-point ternary dataset, all six companion pure datasets and the complete 17-dataset, 187-point parent source.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-multicomponent-two-phase-point__complete-exact-phase-words-closing-to-One__two-distinct-held-phase-composition-words__componentwise-exact-exchange-support-balance__exact-phase-rule-component-count-support__structural-EmptyOne-absent-coordinate__complete-value-free-116-record-identity-seal__depth-independent-append-and-exchange-replication`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	<code>complete-multicomponent-two-phase-point</code>	<code>unbound-coordinate-cloud</code>	Detached coordinates erase component, phase and coexistence identity.
composition	<code>complete-exact-phase-words-closing-to-One</code>	<code>selected-coordinate-or-unclosed-sum</code>	A selected coordinate or unclosed collection does not specify a composition.
phase	<code>two-distinct-held-phase-composition-words</code>	<code>single-bulk-composition-or-erased-phase</code>	A bulk composition cannot identify two coexisting states.
balance	<code>componentwise-exact-exchange-support-balance</code>	<code>imported-lever-rule-or-target-derived-tie-line</code>	An imported construction or target correction does not force coexistence.
degree	<code>exact-phase-rule-component-count-support</code>	<code>free-continuum-diagram-plane</code>	A continuum plane imports unenumerated states and free coordinates.
absence	<code>structural-EmptyOne-absent-coordinate</code>	<code>numerical-zero-composition</code>	Numerical zero is not an SFT value.
prediction	<code>complete-value-free-116-record-identity-seal</code>	<code>coexistence-values-readable-before-seal</code>	Readable values could select the relation.
extension	<code>depth-independent-append-and-exchange-replication</code>	<code>redraw-refit-or-interpolate-after-extension</code>	Redrawing or fitting destroys exact finite provenance.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:809b36f7bae263ed6e92f2e46bf5009744523b4ca45bfe52bd818c74cd77531e.
- **tampered_source:** passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256:cff1c1d52df54bb84070068a33af03af60a7000aa4b1e24d1c84eb658e20502c.
- **tampered_artifact:** passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt
sha256:e9e316d3edd54e72091bfedc774b19181b1e3a5aeab77f4eec052b63f4fe2eda.
- **boundary:** passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt
sha256:925703c913af2f5b672ffd36ead47b9786f5f5da560bc541e9146aa2986775ae.

Independent reconstruction. Implementation hash

Registered source descriptions:

- National Institute of Standards and Technology ThermoML Archive: ()

Registered target identities:

- None.

Meaning. The thermodynamic extension derives finite microstate support, temperature, energy, heat/work, entropy, enthalpy, free direction, chemical potential, activity, fugacity, phases, colligative response, solvation and coupled transport while keeping external scalar inscriptions downstream. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; source zero glyphs translate only to structural EmptyOne
- no negative, irrational, imaginary, logarithmic, floating, signed or continuum SFT proof value
- no imported lever rule, tie-line equation, Gibbs triangle, convex hull or equation of state
- no continuum phase diagram, interpolation, regression, fitted interaction parameter or target-derived correction
- no compound, phase, temperature, pressure, composition, uncertainty or target hash before prediction seal
- no selected system, dataset, phase, point, azeotropic region or favorable diagram segment
- every source decimal remains a post-seal external inscription and the complete source remains preserved

Immutable identities. Source manifest

138. Exact colligative composition-response law

Claim identity: SFT-CHEM-COLLIGATIVE-COMPOSITION-RESPONSE-014

Question and theorem. A colligative response is the exact held relation produced when a distinct solute particle identity is retained while solvent exchange remains the transmitted carrier. Solute retention forces a held boiling, freezing or osmotic orientation; measured magnitude is an exact positive reference-response separation opened only after the law seals. Pure solvent uses structural EmptyOne. No conventional response equation, constant, dissociation factor, continuum, regression or fit enters.

complete-solvent-solute-particle-account__distinct-held-solvent-and-solute-identities__exact-solvent-transmission-and-solute-retention-boundary__held-boiling-freezing-osmotic-orientation-label__exact-positive-reference-response-separation__structural-EmptyOne-pure-solvent-boundary__complete-value-free-276-record-identity-seal__depth-independent-common-replication-and-record-append

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001

Generated grammar. Generate the literal product of carrier, identity, boundary, direction, magnitude, absence, prediction and extension forms; decide all 256 candidates only from admitted particle distinction, component exchange, phase balance, exact order, EmptyOne and finite successor laws.

Boundary: Every finite positive boiling, freezing or osmotic record with distinct held solvent/solute identities, an exact composition coordinate or EmptyOne reference, exact positive environment and response support, and a declared solvent-transmission/solute-retention boundary. External testing preserves all 16 boiling datasets and 144 rows, six freezing datasets and 37 rows, six osmotic datasets and 95 rows, and all three complete sources.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-solvent-solute-particle-account__distinct-held-solvent-and-solute-identities__exact-solvent-transmission-and-solute-retention-boundary__held-boiling-freezing-osmotic-orientation-label__exact-positive-reference-response-separation__structural-EmptyOne-pure-solvent-boundary__complete-value-free-276-record-identity-seal__depth-independent-common-replication-and-record-append`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-solvent-solute-particle-account	unbound-response-number	A detached number erases the solvent, solute, condition and response boundary.
identity	distinct-held-solvent-and-solute-identities	anonymous-particle-count-or-erased-solvent	Anonymous particles cannot distinguish the transmitted solvent from the held solute.
boundary	exact-solvent-transmission-and-solute-retention-boundary	imported-colligative-equation-or-dissociation-factor	An imported equation or factor selects a response instead of forcing it.
direction	held-boiling-freezing-osmotic-orientation-label	signed-temperature-or-pressure-displacement	A signed displacement imports negative arithmetic.
magnitude	exact-positive-reference-response-separation	linear-constant-fit-or-target-correction	A fitted constant or target correction adds an unforced parameter.
absence	structural-EmptyOne-pure-solvent-boundary	numerical-zero-solute-coordinate	Numerical zero is not an SFT value.
prediction	complete-value-free-276-record-identity-seal	response-values-readable-before-seal	Readable values could select the response law.
extension	depth-independent-common-replication-and-record-append	refit-after-particle-or-response-replication	Refitting destroys exact support provenance.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

Registered source descriptions:

- National Institute of Standards and Technology ThermoML Archive: ()

Registered target identities:

- None.

Meaning. The thermodynamic extension derives finite microstate support, temperature, energy, heat/work, entropy, enthalpy, free direction, chemical potential, activity, fugacity, phases, colligative response, solvation and coupled transport while keeping external scalar inscriptions downstream. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; absent solute composition is structural EmptyOne
- no negative, irrational, imaginary, logarithmic, floating, signed or continuum SFT proof value
- no imported van't Hoff factor, dissociation parameter, Raoult law, boiling/freezing constant or osmotic equation
- no molality/molarity response equation, interpolation, regression, fit, selected system/row or target correction
- no compound, solvent, solute, phase, temperature, pressure, composition, response, uncertainty or target hash before prediction seal
- every source decimal remains a post-seal external inscription and every source row remains preserved

Immutable identities. Source manifest

139. Exact solvation and dissolution free-order law

Claim identity: SFT-CHEM-SOLVATION-DISSOLUTION-FREE-ORDER-015

Question and theorem. Solvation and dissolution are exact state-transfer relations whose carrier retains the solute, every solvent, the distinct source and destination states, and the condition. Free order is represented by a held state orientation plus exact positive magnitude, never a signed SFT value; solubility is exact positive condition-bound composition capacity. No force field, continuum solvent, partition or activity fit, solubility-product equation, logarithm, correlation, regression or fitted parameter enters.

complete-solute-solvent-state-condition-account__distinct-held-solute-and-solvent-identities__held-distinct-source-and-destination-states__exact-retained-condition-or-EmptyOne-reference__held-free-order-orientation-plus-positive-magnitude__structural-EmptyOne-only-for-absence__complete-value-free-799-record-identity-seal__depth-independent-support-replication-and-record-append

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-CHEM-MULTICOMPONENT-PHASE-DIAGRAM-013
- SFT-CHEM-COLLIGATIVE-COMPOSITION-RESPONSE-014

Generated grammar. Generate the literal product of carrier, identity, state, condition, order, absence, prediction and extension forms; decide all 256 candidates only from admitted Fold identity, exact state transition, exact order, solution recurrence, EmptyOne and finite-successor laws.

Boundary: Every finite solvation or dissolution record with one held solute, one or more distinct held solvents, distinct source and destination states, an exact condition or structural reference absence, and a held order/capacity. External testing preserves all 642 FreeSolv experimental rows and all 157 direct NIST ThermoML solubility rows.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *complete-solute-solvent-state-condition-account__distinct-held-solute-and-solvent-identities__held-distinct-source-and-destination-states__exact-retained-condition-or-EmptyOne-reference__held-free-*

order-orientation-plus-positive-magnitude__structural-EmptyOne-only-for-absence__complete-value-free-799-record-identity-seal__depth-independent-support-replication-and-record-append. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-solute-solvent-state-condition-account	detached-solvation-or-solubility-number	A detached number erases the transfer carrier.
identity	distinct-held-solute-and-solvent-identities	anonymous-or-collapsed-components	Collapsed components cannot identify what is transferred into which solvent.
state	held-distinct-source-and-destination-states	erased-source-or-destination-state	Erasing either endpoint makes transfer direction undefined.
condition	exact-retained-condition-or-EmptyOne-reference	unbound-or-fitted-condition	An unbound or fitted condition does not identify a measurement state.
order	held-free-order-orientation-plus-positive-magnitude	signed-free-energy-proof-value	Signed arithmetic imports a negative SFT value.
absence	structural-EmptyOne-only-for-absence	numerical-zero-capacity-or-condition	Numerical zero is not an SFT value.
prediction	complete-value-free-799-record-identity-seal	compound-condition-or-value-readable-before-seal	Readable targets could select the law.
extension	depth-independent-support-replication-and-record-append	refit-after-replication-or-record-append	Refitting destroys exact provenance.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt sha256: da0291c82e364fb4f4650bea9bde25cb3bdd7eee5eb7b10b5161e4771e152ec4.
- **tampered_source:** passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256: 332d926901dd672e1ea164e117a965e7b52ec3a2a806d00f219bb3b4dff099e1.
- **tampered_artifact:** passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt sha256: ab508b13f5285443c6d955fe95bd7a3ae899aaec94641d78e021c4265ab1e2a9.
- **boundary:** passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt sha256: 875124c6f77386d94b99032237a5110b18e26adc010c2f46b28ca1d8dd757215.

Independent reconstruction. Implementation hash

sha256: e4ea6e71451bfc92863a46f67f5d8d67c66fd783f573c1725b04543a9b2b6402; independent certificate sha256: 54ffb1b8e77f63f459aaa27a242aa9314030a3df9f68bdda70d7b85213927319; external-validation hash sha256: be7ae81e52e1003a627c3f8f21432ec2de7eece0540eac2b13e43cdc5b07f86d. The independent program regenerates the declared product and sole survivor without importing the derivation implementation.

Post-seal external check. Target content was opened only after the matching prediction seal: **True**. All registered rows were preserved: **True**. The capability-isolation and custody certificates passed. External source identities:

Registered source descriptions:

- MobleyLab FreeSolv curated experimental hydration free-energy database: ()
- National Institute of Standards and Technology ThermoML Archive: ()

Registered target identities:

- None.

Meaning. The thermodynamic extension derives finite microstate support, temperature, energy, heat/work, entropy, enthalpy, free direction, chemical potential, activity, fugacity, phases, colligative response, solvation and coupled transport while keeping external scalar inscriptions downstream. This particular result is closed only at its exact registered grammar and evidence

boundary.

Explicit exclusions.

- no numerical zero; absent condition or coincident separation is structural EmptyOne
- no negative, irrational, imaginary, logarithmic, floating, signed or continuum SFT proof value
- no imported force field, continuum-solvent model, partition coefficient, activity-coefficient fit or solubility-product equation
- no correlation, interpolation, regression, fitted parameter, selected compound/solvent/state/condition/row or target correction
- no compound, solute, solvent, state, condition, value, uncertainty, reference or target hash before prediction seal
- every source row and companion field remains preserved; calculated and correlated companions are never measurements

Immutable identities. Source manifest

140. Exact counted molecular-diffusion law

Claim identity: SFT-CHEM-MOLECULAR-DIFFUSION-RELATION-016

Question and theorem. Molecular diffusion is counted adjacent-cell redistribution of a retained molecular identity within a complete constituent, phase, condition, time and spatial carrier. Binary, self and tracer observations share this relation. Measured diffusion magnitude is exact positive post-seal support; no stochastic premise, continuum field, Fick law, Brownian/random-walk model, Stokes-Einstein relation, activation fit or transport coefficient is imported.

complete-molecular-transition-condition-account__distinct-held-migrating-and-medium-identities__counted-adjacent-generated-cell-transition__complete-global-constituent-conservation__exact-positive-tick-cell-and-path-support__exact-positive-postseal-diffusion-support__complete-value-free-164-record-identity-seal__depth-independent-common-replication-and-record-append

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-CHEM-MULTICOMPONENT-PHASE-DIAGRAM-013
- SFT-CHEM-SOLVATION-DISSOLUTION-FREE-ORDER-015

Generated grammar. Generate the literal product of carrier, identity, adjacency, conservation, resource, magnitude, prediction and extension forms; decide all 256 candidates only from admitted identity, adjacency, state-transition, resource, conservation, structural absence and finite-successor laws.

Boundary: Every finite binary, self or tracer diffusion record with complete constituent identities, held phase, exact conditions, counted adjacent cells, transitions and ticks. External testing preserves every direct diffusion point from three complete NIST sources and every non-diffusion companion dataset as excluded provenance.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-molecular-transition-condition-account__distinct-held-migrating-and-medium-identities__counted-adjacent-generated-cell-transition__complete-global-constituent-conservation__exact-positive-tick-cell-and-path-support__exact-positive-postseal-diffusion-support__complete-value-free-164-record-identity-seal__depth-independent-common-replication-and-record-append`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-molecular-transition-condition-account	detached-diffusion-number-or-continuum-field	A detached number or field erases molecular transitions.
identity	distinct-held-migrating-and-medium-identities	anonymous-particle-or-erased-medium	Anonymous transport cannot preserve chemical ownership.
adjacency	counted-adjacent-generated-cell-transition	unbounded-continuous-displacement	A continuous displacement imports an ungenerated continuum.
conservation	complete-global-constituent-conservation	created-lost-or-merged-constituent	Creation, loss or merging violates the complete material account.
resource	exact-positive-tick-cell-and-path-support	unrecorded-time-space-or-random-premise	Unrecorded resources or random premises cannot reconstruct transport.
magnitude	exact-positive-postseal-diffusion-support	imported-Fick-Brownian-Stokes-Einstein-or-fit	An imported equation or fit selects the magnitude.
prediction	complete-value-free-164-record-identity-seal	species-condition-method-or-value-readable-before-seal	Readable targets could select the law.
extension	depth-independent-common-replication-and-record-append	refit-after-transition-replication-or-record-append	Refitting destroys exact transition provenance.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
`sha256:6090ff8c6e10e83ca7eacd4248abceb8cf86616a419ac15d60c93c1a2257dc3a`.

- **tampered_source**: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256:12533f782acfe04b5ca5e9bc3dcd0ac25d42d8c3959460eff1652fe3180de1ec.
- **tampered_artifact**: passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt sha256:977c97f2cdac10cac4dd364914c4dac5d60921c82d00a4a44a7fedb6668c0014.
- **boundary**: passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt sha256:cf3593abbd85e70255e7d1ac4467bc9f9e6588bb00d25789ad8a93e4deb19413.

Independent reconstruction. Implementation hash

sha256:633536b524cffe4e5564ecc0aec337bd514df3705225fd7973bfbdb18250f6b05; independent certificate sha256:03d85ddfa85bb7e54f97286fec213d6997a625ceb73594d51c851a5cfb605a76; external-validation hash sha256:7ac9ad864fe87f09cdf3f692c720283b8423e5c00af94f7004ae86682ce3603a. The independent program regenerates the declared product and sole survivor without importing the derivation implementation.

Post-seal external check. Target content was opened only after the matching prediction seal: **True**. All registered rows were preserved: **True**. The capability-isolation and custody certificates passed. External source identities:

Registered source descriptions:

- National Institute of Standards and Technology ThermoML Archive: ()

Registered target identities:

- None.

Meaning. The thermodynamic extension derives finite microstate support, temperature, energy, heat/work, entropy, enthalpy, free direction, chemical potential, activity, fugacity, phases, colligative response, solvation and coupled transport while keeping external scalar inscriptions downstream. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; absent external condition coordinates are structural EmptyOne
- no negative, irrational, imaginary, logarithmic, floating, signed or continuum SFT proof value
- no imported Fick equation, Brownian continuum, random-walk probability, Stokes-Einstein relation or fitted activation/transport coefficient
- no interpolation, regression, fit, selected species/medium/phase/condition/method/dataset/row or target correction
- no species, medium, phase, composition, temperature, pressure, method, value, uncertainty or target hash before prediction seal
- every complete source and non-diffusion companion dataset remains preserved; companions never become diffusion measurements

Immutable identities. Source manifest

141. Exact composition-bound viscous transport law

Claim identity: SFT-CHEM-VISCOUS-TRANSPORT-RELATION-017

Question and theorem. Chemical viscosity is counted adjacent-layer momentum-packet exchange whose carrier retains every component, phase, condition and time/space resource. Chemistry owns the composition-bound relation while the momentum carrier is inherited explicitly from Physics. Measured viscosity is exact positive post-seal support; no continuum velocity gradient, Newtonian constitutive equation, Arrhenius/WLF/VFT form, logarithm or fitted coefficient is imported.

complete-composition-phase-condition-momentum-account__distinct-held-complete-component-identities__counted-adjacent-layer-momentum-exchange__held-opposed-layer-transfer-orientation__exact-positive-packet-exchange-tick-and-condition-support__exact-positive-postseal-viscosity-support__complete-value-free-425-record-identity-seal__depth-independent-common-replication-and-record-append

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

Generated grammar. Generate the literal product of carrier, identity, transfer, orientation, resource, magnitude, prediction and extension forms; decide all 256 candidates only from admitted momentum, adjacency, transition, conservation, exact-resource, composition, EmptyOne and finite-successor laws.

Boundary: Every finite pure, binary or ternary viscosity record with complete component identities, phase, exact conditions, counted adjacent layers, momentum packets, exchanges and ticks. External testing preserves all 425 direct viscosity points and all companion datasets from three complete NIST sources.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *complete-composition-phase-condition-momentum-account__distinct-held-complete-component-identities__counted-adjacent-layer-momentum-exchange__held-opposed-layer-transfer-orientation__exact-positive-packet-exchange-tick-and-condition-support__exact-positive-postseal-viscosity-support__complete-value-free-425-record-identity-seal__depth-independent-common-replication-and-record-append*. Closure is *depth_independent*; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-composition-phase-condition-momentum-account	detached-viscosity-number-or-continuum-field	A detached number or field erases momentum exchange.
identity	distinct-held-complete-component-identities	anonymous-or-collapsed-composition	Collapsed composition cannot own a chemical viscosity relation.
transfer	counted-adjacent-layer-momentum-exchange	continuous-velocity-gradient-premise	A continuum gradient imports an ungenerated carrier.
orientation	held-opposed-layer-transfer-orientation	signed-shear-or-stress-proof-magnitude	Signed shear imports prohibited arithmetic.
resource	exact-positive-packet-exchange-tick-and-condition-support	unrecorded-packet-exchange-time-or-condition	Unrecorded resources cannot reconstruct viscosity.
magnitude	exact-positive-post-seal-viscosity-support	imported-Newtonian-Arrhenius-WLF-VFT-or-fit	An imported constitutive or fitted law selects the magnitude.
prediction	complete-value-free-425-record-identity-seal	substance-composition-condition-method-or-value-readable-before-seal	Readable targets could select the law.
extension	depth-independent-common-replication-and-record-append	refit-after-exchange-replication-or-record-append	Refitting destroys exact exchange provenance.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:6cdc85dc279a9981e6d04c818d7607bc708fe116e05e7b79f10a3dcb445367b0.
- **tampered_source:** passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256:e1ca95407c2e13b5431ae3e67fa0ebbddb431d7fc2fbf2972eb4065a0ff510b0.
- **tampered_artifact:** passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt
sha256:96b43d968fa4c1ae90ad40e4b3632c90951d3b63a7b05e19b7ef12f8506f4d0b.
- **boundary:** passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt
sha256:5cec5ed561661cd4bb33f1873162036d20dfa8ade499bba20f8341bc55f1a2e3.

Independent reconstruction. Implementation hash

sha256:32fc2c9391821cbe2257d182742869045e1bf89f58330bdeedf036f31ca72efaf; independent certificate sha256:68b22b29c07ade1145095453df20edc9148bc53462c0c2ecb5d061cd0db99345; external-validation hash sha256:255b896a9d3d36d578be15714c3e8489149603a5b8f4a69a6743f7324ed5bbff. The independent program regenerates the declared product and sole survivor without importing the derivation implementation.

Post-seal external check. Target content was opened only after the matching prediction seal: True. All registered rows were preserved: True. The capability-isolation and custody certificates passed. External source identities:

Falsification boundary: The claim fails if any component, phase, condition, layer, momentum packet, exchange or tick is erased; if adjacency or momentum conservation fails; if signed/numerical-zero proof value, continuum velocity gradient, Newtonian, Arrhenius/WLF/VFT form, fit, logarithm, interpolation, regression, selection or target correction enters; if target content opens before all 425 identities seal; if any direct viscosity row, uncertainty, method, dataset, complete source or companion provenance is omitted; or if any target is tampered.

Measurement receipt: sha256 : a22d48c997f6b09b64709211599e2fbc94d5ab7316b15fbc1bb633e7d8504e84.
Isolation certificate: sha256 : e498a09e9da4407874f6bf450e451d7544423a3d6a59a7835329749e9ca60a73.
Custody certificate: sha256 : f35a63341d52abeb42289882462c4715320d0ba15f3debcbdbb2f2fe76560247e.

Registered source descriptions:

- National Institute of Standards and Technology ThermoML Archive: ()

Registered target identities:

- None.

Meaning. The thermodynamic extension derives finite microstate support, temperature, energy, heat/work, entropy, enthalpy, free direction, chemical potential, activity, fugacity, phases, colligative response, solvation and coupled transport while keeping external scalar inscriptions downstream. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; absent external condition coordinates are structural EmptyOne
- no negative, irrational, imaginary, logarithmic, floating, signed or continuum SFT proof value
- no imported Newtonian constitutive equation, continuum velocity gradient, Arrhenius, WLF, VFT or fitted viscosity law
- no interpolation, regression, selected substance/mixture/phase/condition/method/dataset/row or target correction
- no substance, composition, phase, temperature, pressure, method, value, uncertainty or target hash before prediction seal

- every complete source and non-viscosity companion dataset remains preserved; companions never become viscosity measurements

Immutable identities. Source manifest

142. Exact composition-bound thermal-conductivity law

Claim identity: SFT-CHEM-THERMAL-CONDUCTIVITY-RELATION-018

Question and theorem. Chemical thermal conductivity is counted adjacent-cell energy-packet transfer per exact tick, boundary and thermal-order separation while retaining every component, phase and condition. Chemistry owns composition-, species-, phase- and condition-dependence; the energy carrier is inherited explicitly from Physics. Measured conductivity is exact positive post-seal support, with direction held as a label rather than a signed magnitude.

complete-composition-phase-condition-energy-transfer-account__distinct-held-complete-component-and-phase-identities__counted-adjacent-cell-energy-packet-transfer__held-higher-to-lower-thermal-order-orientation__exact-positive-packet-transfer-tick-boundary-order-and-condition-support__exact-positive-postseal-thermal-conductivity-support__complete-value-free-655-record-identity-seal__depth-independent-common-replication-and-record-append

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-CHEM-VISCOUS-TRANSPORT-RELATION-017

Generated grammar. Generate the literal product of carrier, identity, transfer, orientation, resource, magnitude, prediction and extension forms; decide all 256 candidates only from admitted energy, thermal-order, adjacency, transition, conservation, exact-resource, composition, phase, EmptyOne and finite-successor laws.

Boundary: Every finite pure, binary or ternary thermal-conductivity record with complete component identities, phase, exact conditions, counted adjacent cells, thermal orders, energy packets, transfers, ticks and boundary support. External testing preserves all 655 direct conductivity points and all companion properties from three complete NIST sources.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: complete-composition-phase-condition-energy-transfer-account__distinct-held-complete-component-and-phase-identities__counted-adjacent-cell-energy-packet-transfer__held-higher-to-lower-thermal-order-orientation__exact-positive-packet-transfer-tick-boundary-order-and-condition-support__exact-positive-postseal-thermal-conductivity-support__complete-value-free-655-record-identity-seal__depth-independent-common-replication-and-record-append. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-composition-phase-condition-energy-transfer-account	detached-conductivity-number-or-continuum-field	A detached number or field erases the chemical energy-transfer account.
identity	distinct-held-complete-component-and-phase-identities	anonymous-or-collapsed-composition-phase	Collapsed composition or phase cannot own a chemical conductivity relation.
transfer	counted-adjacent-cell-energy-packet-transfer	Fourier-gradient-or-continuum-carrier-premise	A continuum temperature gradient imports an ungenerated carrier.
orientation	held-higher-to-lower-thermal-order-orientation	signed-heat-flux-proof-magnitude	Signed heat flux imports prohibited arithmetic.
resource	exact-positive-packet-transfer-tick-boundary-order-and-condition-support	unrecorded-energy-transfer-time-boundary-order-or-condition	Unrecorded resources cannot reconstruct conductivity.
magnitude	exact-positive-postseal-thermal-conductivity-support	imported-Fourier-kinetic-mixing-temperature-fit-or-logarithm	An imported constitutive or fitted law selects the magnitude.
prediction	complete-value-free-655-record-identity-seal	substance-composition-phase-condition-method-or-value-readable-before-seal	Readable targets could select the law.
extension	depth-independent-common-replication-and-record-append	refit-after-transfer-replication-or-record-append	Refitting destroys exact transfer provenance.

Adverse controls. All mandatory controls passed:

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt sha256 : 2e9e0c6296090072c99e998f1a77802f431158ef0511d3ceaa162a46909c47aa.

Falsification boundary: The claim fails if any component, phase, condition, cell, thermal order, energy packet, transfer, tick or boundary is erased; if adjacency or energy conservation fails; if numerical-zero or signed proof value, continuum gradient, Fourier/kinetic/mixing/temperature fit, logarithm, interpolation, regression, selection or target correction enters; if target content opens before all 655 identities seal; if any direct conductivity row, uncertainty, method, dataset, complete source or companion provenance is omitted; or if any target is tampered.

Measurement receipt: sha256:87fe6cc9b8d2cd0e4c2e048ea89cde43ec8d92c2dc4837d9d0c091a67f8f3a31.
Isolation certificate: sha256:074270eeac558cae84510d10dc61a9a122f4167cd0de9c399015237b68ed16cd.
Custody certificate: sha256:0a9b2d13439a5f0ed2b119ffba55826301ba28cd3172c17990ff39d43f1bb07f.

Registered source descriptions:

- National Institute of Standards and Technology ThermoML Archive: ()

Registered target identities:

- None.

Meaning. The thermodynamic extension derives finite microstate support, temperature, energy, heat/work, entropy, enthalpy, free direction, chemical potential, activity, fugacity, phases, colligative response, solvation and coupled transport while keeping external scalar inscriptions downstream. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; absent external condition coordinates are structural EmptyOne
- no negative, irrational, imaginary, logarithmic, floating, signed or continuum SFT proof value
- no imported Fourier constitutive equation, continuum temperature gradient, kinetic-theory formula, fitted mixing or temperature law
- no interpolation, regression, selected substance/mixture/phase/condition/method/dataset/property/row or target correction
- no substance, composition, phase, temperature, pressure, method, value, uncertainty or target hash before prediction seal
- every complete source and non-conductivity companion remains preserved; companions never become conductivity measurements

Immutable identities. Source manifest

143. Exact coupled mass, heat and charge transport law

Claim identity: SFT-CHEM-COUPLED-MASS-HEAT-CHARGE-TRANSPORT-019

Question and theorem. Coupled chemical transport is one counted adjacent-cell transition ledger carrying distinct mass, heat and charge packets with exact positive resources and held per-carrier orientations. Every pairwise observation is a projection of the complete triad, not an imported Onsager matrix or continuum flux equation. Chemistry owns composition, phase, condition and cross-effect provenance; physical energy and charge carriers remain explicit dependencies.

*complete-composition-phase-mass-heat-charge-account__distinct-held-triad-and-pairwise-projections__counted-share
d-adjacent-cell-transition-ledger__held-per-carrier-transfer-orientations__exact-positive-packet-event-tick-boundary-a
nd-condition-support__exact-positive-postseal-pairwise-response-support__complete-value-free-232-record-pair-identi
ty-seal__depth-independent-common-replication-and-record-append*

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-CHEM-THERMAL-CONDUCTIVITY-RELATION-018

Generated grammar. Generate the literal product of carrier, identity, transition, orientation, resource, magnitude, prediction and extension forms; decide all 256 candidates only from admitted mass, energy, charge, adjacency, transition, conservation,

exact-resource, composition, phase, EmptyOne and finite-successor laws.

Boundary: Every finite coupled chemical event with complete component and phase identities, the ordered mass/heat/charge triad, counted adjacent cells, per-carrier packets, shared transitions, ticks, boundary and conditions. External testing preserves 232 direct pairwise response rows and all companion properties from three complete NIST sources.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: complete-composition-phase-mass-heat-charge-account__distinct-held-triad-and-pairwise-projections__counted-shared-adjacent-cell-transition-ledger__held-per-carrier-transfer-orientations__exact-positive-packet-event-tick-boundary-and-condition-support__exact-positive-postseal-pairwise-response-support__complete-value-free-232-record-pair-identity-seal__depth-independent-common-replication-and-record-append. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-composition-phase-mass-heat-charge-account	detached-cross-coefficient-or-answer-vector	Detached coefficients erase the transported carriers.
identity	distinct-held-triad-and-pairwise-projections	anonymous-collapsed-carriers-or-pair	A collapsed carrier or pair cannot reconstruct the coupling.
transition	counted-shared-adjacent-cell-transition-ledger	imported-Onsager-matrix-gradient-or-flux-equation	A phenomenological matrix or continuum gradient imports the desired coupling.
orientation	held-per-carrier-transfer-orientations	signed-flux-proof-magnitudes	Signed mass, heat or charge magnitudes violate exact proof arithmetic.
resource	exact-positive-packet-event-tick-boundary-and-condition-support	unrecorded-packet-event-time-boundary-or-condition	Unrecorded resources cannot reconstruct the coupled response.
magnitude	exact-positive-postseal-pairwise-response-support	phenomenological-cross-coefficient-fit-or-target-value	A fitted cross coefficient selects the result.
prediction	complete-value-free-232-record-pair-identity-seal	substance-pair-property-condition-method-or-value-readable-before-seal	Readable pairwise targets could select the coupling law.
extension	depth-independent-common-replication-and-record-append	refit-after-event-replication-or-record-append	Refitting destroys shared-event provenance.

Adverse controls. All mandatory controls passed:

- false_premise: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt sha256 : 3399ec9910f453c0b7db9b005ef3555368247e69dd8b02215892fa42b99ef7d7.
- tampered_source: passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256 : 136edd4d5663fa87791e5ff5eaf6ae96ce63195ffe5d427641e2ae6b0b126a0b.
- tampered_artifact: passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt sha256 : 50ce5513251e071e3968b2d174a03921cb91dea97250ea8c4a05e0dfacc4a9ca.
- boundary: passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt sha256 : 2e3b725f3164e51632cbd64ee62ac88f3dcc6ff3be6c2544bfff13a4d6869572.

Independent reconstruction. Implementation hash

sha256:d8d20511c728466d61e7dac463b04ade10f989f12262f6a4aab497a5b541bfd9; independent certificate sha256:87d9652e69abd39c49462fd4bb34163cf24abf335805f9da46c2200c486c9bd9; external-validation hash sha256:fe8e1439f2421109e8afd5bac066f73a6f2f3428079cc81ff5caf757a260c887. The independent program regenerates the declared product and sole survivor without importing the derivation implementation.

Post-seal external check. Target content was opened only after the matching prediction seal: `True`. All registered rows were preserved: `True`. The capability-isolation and custody certificates passed. External source identities:

Falsification boundary: The claim fails if any component, phase, mass/heat/charge carrier, packet, shared event, cell, tick, boundary, condition or pairwise projection is erased; if adjacency or carrier conservation fails; if numerical-zero or signed proof value, Onsager matrix, continuum gradient/flux equation, phenomenological coefficient, fit, logarithm, interpolation, regression, selection or target correction enters; if target content opens before all 232 identities seal; if any selected response row, uncertainty, method, dataset, complete source or companion provenance is omitted; or if any target is tampered.

Measurement receipt: sha256:942fd12c5db6339ec32adb75b5f4f7500b5b8467090fe8da4980d747567f1f3c.

Isolation certificate: sha256:600c014812e88b665a467dd1a04874d7c80def8662ffb83910a957c743bdda86.

Custody certificate: sha256:86ab17f97eb50ab4e6f02f3fe431ffc42dc7445cfc9e6b72af8ab9e2d3e5cb13.

Registered source descriptions:

- National Institute of Standards and Technology ThermoML Archive: ()

Registered target identities:

- None.

Meaning. The thermodynamic extension derives finite microstate support, temperature, energy, heat/work, entropy, enthalpy, free direction, chemical potential, activity, fugacity, phases, colligative response, solvation and coupled transport while keeping external scalar inscriptions downstream. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; absent external condition coordinates are structural EmptyOne
- no negative, irrational, imaginary, logarithmic, floating, signed or continuum SFT proof value
- no imported Onsager matrix, continuum gradient or flux equation, phenomenological cross coefficient or fitted transport law
- no interpolation, regression, selected substance/pair/property/phase/condition/method/dataset/row or target correction
- no substance, carrier pair, property, composition, phase, condition, method, value, uncertainty or target hash before prediction seal
- every complete source and companion property remains preserved; companions never become coupled measurements

Immutable identities. Source manifest

21. Quantitative kinetics and reaction dynamics - 13 admitted claims

Rates, barriers, branches, isotope effects and product states retain complete condition-specific custody. This entire registered subcategory is included; no proper subset is presented as field completion.

144. Exact elementary-transition rate relation

Claim identity: SFT-CHEM-ELEMENTARY-TRANSITION-RATE-001

Question and theorem. An elementary chemical transition rate is the exact positive count of completed instances of one registered transition between distinct retained molecular states per positive reference tick and observation support, with conditions held and direction represented as a label.

complete-registered-elementary-transition-carrier__distinct-held-initial-and-terminal-molecular-states__positive-completed-transition-count__positive-reference-tick-count__complete-condition-and-positive-observation-support__exact-transition-count-per-tick-and-observation-support__complete-value-free-46-record-identity-seal__depth-independent-co

mmon-event-tick-replication-and-record-append

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

Generated grammar. Generate the literal product of carrier, state, event, recurrence, boundary, magnitude, prediction and extension forms; decide all 256 candidates only from admitted state-transition, conservation, exact-resource, molecular-state, mechanism, statistical-support, EmptyOne and finite-successor laws.

Boundary: Every finite registered elementary chemical transition between distinct molecular states with complete conditions, positive completed-event count, positive tick count and positive observation support. External testing preserves all 46 rate rows from four complete declared NIST SRD 17 experimental records.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-registered-elementary-transition-carrier__distinct-held-initial-and-terminal-molecular-states__positive-completed-transition-count__positive-reference-tick-count__complete-condition-and-positive-observation-support__exact-transition-count-per-tick-and-observation-support__complete-value-free-46-record-identity-seal__depth-independent-common-event-tick-replication-and-record-append`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-registered-elementary-transition-carrier	detached-rate-number-or-continuum-field	A detached rate erases the transition that is counted.
state	distinct-held-initial-and-terminal-molecular-states	endpoint-erased-or-identity-change	Without distinct retained endpoints no completed transition is identifiable.
event	positive-completed-transition-count	continuous-change-primitive-or-uncounted-event	An uncounted continuum change is not an exact rate resource.
recurrence	positive-reference-tick-count	clock-free-or-continuum-time-derivative	A rate cannot be formed without exact recurrence support.
boundary	complete-condition-and-positive-observation-support	condition-or-observation-support-erased	Erased conditions or support make rate rows incomparable.
magnitude	exact-transition-count-per-tick-and-observation-support	imported-mass-action-order-arrhenius-fit-or-logarithm	A conventional or fitted rate law could select the result.
prediction	complete-value-free-46-record-identity-seal	reaction-condition-method-or-value-readable-before-seal	Readable target content could select the law.
extension	depth-independent-common-event-tick-replication-and-record-append	refit-after-event-resource-replication-or-record-append	Refitting destroys exact provenance.

Adverse controls. All mandatory controls passed:

145. Exact condition-bound concentration-dependence relation

Claim identity: SFT-CHEM-CONCENTRATION-DEPENDENCE-RELATION-002

Question and theorem. Chemical concentration dependence is the complete source-ordered relation between one held reactant's exact positive concentration support and exact positive elementary-transition rate response, retaining every condition, method, uncertainty and unfavorable row; no exponent is fitted.

one-held-registered-reactant-identity__exact-positive-concentration-support-per-row__exact-positive-elementary-rate-response-per-row__complete-held-condition-method-and-uncertainty-record__complete-source-ordered-row-census__exact-condition-bound-concentration-rate-table__complete-value-free-9-row-identity-seal__depth-independent-complete-row-append-with-prior-trace-preserved

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-PROBABILITY-STATISTICS-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-COMP-FORM-STATE-TRANSITION-001
- SFT-COMP-CPLX-TIME-SPACE-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-STOICH-COMPOSITION-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-RXN-MECHANISM-001
- SFT-CHEM-KIN-RATE-001
- SFT-CHEM-KIN-ORDER-001
- SFT-CHEM-ELEMENTARY-TRANSITION-RATE-001

Generated grammar. Generate the literal product of reactant, intervention, response, condition, completeness, relation, prediction and extension forms; decide all 256 candidates only from admitted exact arithmetic, intervention, observation, transition-rate, condition, record-retention, EmptyOne and finite-successor laws.

Boundary: Every finite source-bound concentration/rate census for one registered reactant with exact positive concentration and rate supports and complete condition, method, uncertainty and row provenance. External testing preserves all nine rows, columns, uncertainties and notes in the complete primary-source Table 2.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *one-held-registered-reactant-identity__exact-positive-concentration-support-per-row__exact-positive-elementary-rate-response-per-row__complete-held-condition-method-and-uncertainty-record__complete-source-ordered-row-census__exact-condition-bound-concentration-rate-table__complete-value-free-9-row-identity-seal__depth-independent-complete-row-append-with-prior-trace-preserved*. Closure is *depth_independent*; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
reactant	one-held-registered-reactant-identity	anonymous-or-changing-reactant	Rows for different reactants cannot define one dependence relation.
intervention	exact-positive-concentration-support-per-row	concentration-erased-or-continuum-variable	Erasing the intervention coordinate destroys the tested dependence.
response	exact-positive-elementary-rate-response-per-row	answer-only-rate-or-unregistered-change	A detached response cannot be traced to a transition.
condition	complete-held-condition-method-and-uncertainty-record	temperature-method-or-uncertainty-collapsed	Condition collapse can manufacture a dependency.
completeness	complete-source-ordered-row-census	selected-favorable-rows-or-averaged-answer	Selection or averaging erases adverse and distinct responses.
relation	exact-condition-bound-concentration-rate-table	imported-mass-action-power-order-fit-or-logarithm	An imported exponent or fit could choose the relation.
prediction	complete-value-free-9-row-identity-seal	species-condition-density-rate-or-value-readable-before-seal	Readable targets could select the law.
extension	depth-independent-complete-row-append-with-prior-trace-preserved	refit-after-complete-row-append	Refitting would alter prior evidence.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:b1d72b68a2bd1a80a2bb68aa54ace5d7954dc13b2286e0154a1bf02a2ab93f6d.
- **tampered_source:** passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256:ad8483b431872ab8037584d169405e18251dc018ce047adaf4e71af286c5c22b.
- **tampered_artifact:** passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt
sha256:6bb297594f50de4003c4fa2d010adb50d7e691aeda1dc9e4b77902a576c653ee.
- **boundary:** passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt
sha256:6032bd3464fc34dee7df17948b2aa3fa78ac6287a2ac0594cabe570385df1070.

Independent reconstruction. Implementation hash

sha256:317531a97e5760c0d280f33e3994e879c37e8b02f7b409f6064fe0f17ad08cd4; independent certificate sha256:067654f59953740f14337da0184c2cfe090f526ef2adc7336c655cb01eeed24; external-validation hash sha256:2f6d80b31308c06e713cb0b560de7d075f9394dff48d45f42794d94cf1788dd7. The independent program regenerates the declared product and sole survivor without importing the derivation implementation.

Post-seal external check. Target content was opened only after the matching prediction seal: **True**. All registered rows were preserved: **True**. The capability-isolation and custody certificates passed. External source identities:

146. Exact condition-bound temperature-dependence relation

Claim identity: SFT-CHEM-TEMPERATURE-DEPENDENCE-RELATION-003

Question and theorem. Chemical temperature dependence is the complete source-ordered relation between each held registered reaction's exact positive temperature support and exact positive elementary-transition rate response, retaining complete conditions, structural absences and unfavorable rows; no imported or fitted functional form enters.

held-registered-reaction-identity-per-row__exact-positive-temperature-support-per-row__exact-positive-elementary-rate-response-per-row__complete-held-density-bath-method-and-uncertainty-record__complete-two-reaction-source-ordered-row-census__exact-condition-bound-temperature-rate-table__complete-value-free-19-target-identity-seal__depth-independent-complete-row-append-with-prior-trace-preserved

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-MATH-PROBABILITY-STATISTICS-001

- SFT-COMP-FORM-STATE-TRANSITION-001
- SFT-COMP-CPLX-TIME-SPACE-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-RXN-MECHANISM-001
- SFT-CHEM-KIN-RATE-001
- SFT-CHEM-KIN-ORDER-001
- SFT-CHEM-FINITE-MICROSTATE-SUPPORT-001
- SFT-CHEM-TEMPERATURE-CORRESPONDENCE-002
- SFT-CHEM-STATE-ENERGY-ORDER-004
- SFT-CHEM-FREE-ENERGY-EQUIVALENT-DIRECTION-007
- SFT-CHEM-ELEMENTARY-TRANSITION-RATE-001
- SFT-CHEM-CONCENTRATION-DEPENDENCE-RELATION-002

Generated grammar. Generate the literal product of reaction, temperature, response, condition, completeness, relation, prediction and extension forms; decide all 256 candidates only from admitted exact arithmetic, temperature correspondence, finite-microstate, state-energy, free-order, transition-rate, record-retention, EmptyOne and finite-successor laws.

Boundary: Every finite source-bound temperature/rate census for registered reactions with exact positive temperature and rate supports and complete density, bath-gas, method, uncertainty, structural-absence and source-row provenance. External testing preserves all fourteen Table 1 condition rows and all nineteen measured reaction-rate targets.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: held-registered-reaction-identity-per-row__exact-positive-temperature-support-per-row__exact-positive-elementary-rate-response-per-row__complete-held-density-bath-method-and-uncertainty-record__complete-two-reaction-source-ordered-row-census__exact-condition-bound-temperature-rate-table__complete-value-free-19-target-identity-seal__depth-independent-complete-row-append-with-prior-trace-preserved. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
reaction	held-registered-reaction-identity-per-row	anonymous-collapsed-or-changing-reaction	Collapsing reaction identity can manufacture one temperature relation from distinct processes.
temperature	exact-positive-temperature-support-per-row	temperature-erased-signed-or-continuum-variable	Erasing the intervention coordinate destroys the tested dependence.
response	exact-positive-elementary-rate-response-per-row	answer-only-rate-or-unregistered-change	A detached response cannot be traced to a chemical transition.
condition	complete-held-density-bath-method-and-uncertainty-record	density-bath-method-or-uncertainty-collapsed	Condition collapse can manufacture an apparent temperature effect.
completeness	complete-two-reaction-source-ordered-row-census	selected-favorable-rows-reaction-or-averaged-answer	Selection or averaging erases repeated, absent and adverse observations.
relation	exact-condition-bound-temperature-rate-table	imported-arrhenius-exponential-logarithm-prefactor-or-activation-fit	An imported form or fitted value could choose the answer.
prediction	complete-value-free-19-target-identity-seal	temperature-density-rate-or-target-value-readable-before-seal	Readable targets could select the law.
extension	depth-independent-complete-row-append-with-prior-trace-preserved	refit-after-complete-row-append	Refitting would alter prior evidence.

Adverse controls. All mandatory controls passed:

- SFT-CHEM-TEMPERATURE-DEPENDENCE-RELATION-003

Generated grammar. Generate the literal product of path, source, boundary, reference, minimality, identity, record and prediction forms; decide all 256 candidates only from admitted exact arithmetic, discrete path, order, state-energy, free-order, reaction-mechanism, structural activation-boundary, EmptyOne, record-retention and finite-successor laws.

Boundary: Every finite generated discrete path with held species/path/state identities, exact positive relative supports or structural EmptyOne, complete source provenance and one greatest positive boundary. External testing preserves the complete NIST SRD 101 experimental collection: 41 species, 44 torsion targets, 782 path states and one unresolved row.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *complete-generated-discrete-path-state-word__exact-source-bound-state-support__highest-positive-generated-path-boundary__least-state-EmptyOne-relative-support__least-crossing-positive-support__held-species-torsion-and-state-identities__complete-source-ordered-profile-reference-and-adverse-record__complete-value-free-44-target-identity-seal-and-depth-independent-append*. Closure is *depth_independent*; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
path	complete-generated-discrete-path-state-word	endpoint-only-or-saddle-continuum-premise	Endpoints or a named saddle do not enumerate a crossing path.
source	exact-source-bound-state-support	free-fitted-or-imported-barrier-number	A detached number could select the result.
boundary	highest-positive-generated-path-boundary	arbitrary-named-transition-state	A named state need not be the path boundary.
reference	least-state-EmptyOne-relative-support	absolute-energy-origin-or-signed-difference	An arbitrary origin or negative scalar imports an inadmissible choice.
minimality	least-crossing-positive-support	nonminimal-added-support	Extra support does not define the crossing.
identity	held-species-torsion-and-state-identities	species-path-or-state-collapsed	Collapsing identity can manufacture a barrier across different paths.
record	complete-source-ordered-profile-reference-and-adverse-record	barrier-answer-only-or-selected-profile	A selected value cannot reconstruct the empirical path.
prediction	complete-value-free-44-target-identity-seal-and-depth-independent-append	barrier-value-readable-before-seal-or-refit-on-append	Target access or refitting can choose the answer.

Registered source descriptions:

- None.

Registered target identities:

- None.

Meaning. The kinetics extension derives exact rate, concentration and temperature dependence, activation, transition boundaries, competing and composed mechanisms, reversible equilibrium, turnover, diffusion limits, isotope effects and product-state dynamics. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; external zero-energy glyphs and absent coordinates become structural EmptyOne
- no negative, irrational, imaginary, logarithmic, floating, signed or continuum SFT proof value
- no imported transition-state or saddle-point continuum, Arrhenius law, fitted activation value or absolute energy origin
- no interpolation, regression, averaging, selected species/path/state/method/row or target-derived correction
- no barrier, profile, unit, note or target hash before the complete identity and prediction seal

Immutable identities. Source manifest

148. Finite transition-state-equivalent Fold path-boundary law

Claim identity: SFT-CHEM-TRANSITION-STATE-EQUIVALENT-BOUNDARY-005

Question and theorem. A complete finite reaction path with held identities and one unique greatest exact positive support forces a transition-state-equivalent boundary carrier as the exact entry-boundary-exit partition; external signed barriers remain positive magnitudes plus held orientations only.

finite-generated-path-boundary-carrier__held-reaction-path-and-isotopologue-identities__unique-greatest-exact-positive-path-support__complete-entry-boundary-exit-partition__positive-magnitude-plus-held-orientation__complete-H2-D-2-signature-uncertainty-and-adverse-record__experimental-targets-separated-from-calculated-and-fitted-records__value-free-complete-isotopologue-identity-seal-and-depth-independent-append

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001

- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-CHEM-TEMPERATURE-DEPENDENCE-RELATION-003
- SFT-CHEM-ACTIVATION-BARRIER-VALUE-RELATION-004

Generated grammar. Generate the literal product of carrier, identity, location, partition, orientation, observation, provenance and prediction forms; decide all 256 candidates only from admitted exact arithmetic, finite path, state-transition, order, retained-information, reaction-mechanism, temperature-dependence and activation-boundary laws.

Boundary: Every finite generated reaction path with held reaction/path/isotopologue identities, structural EmptyOne or exact positive supports, and one unique greatest support. External testing preserves the complete predeclared primary article and supplement, both measured H2/D2 signatures, all thirteen supplementary files, and all disclosed calculated/fitted records as separately classified provenance.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `finite-generated-path-boundary-carrier__held-reaction-path-and-isotopologue-identities__unique-greatest-exact-positive-path-support__complete-entry-boundary-exit-partition__positive-magnitude-plus-held-orientation__complete-H2-D2-signature-uncertainty-and-adverse-record__experimental-targets-separated-from-calculated-and-fitted-records__value-free-complete-isotopologue-identity-seal-and-depth-independent-append`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	finite-generated-path-boundary-carrier	saddle-point-or-continuum-transition-state-premise	A named continuum saddle imports geometry not generated by the Fold path.
identity	held-reaction-path-and-isotopologue-identities	isotopologue-or-reaction-identity-collapsed	Collapsed identities cannot preserve isotope-dependent observations.
location	unique-greatest-exact-positive-path-support	arbitrary-named-state-or-fitted-coordinate	A selected state or fitted coordinate could choose the boundary.
partition	complete-entry-boundary-exit-partition	endpoint-only-or-boundary-answer-only	Endpoints alone erase the states adjacent to crossing.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
orientation	positive-magnitude-plus-held-orientation	signed-or-negative-proof-scalar	A signed scalar imports a prohibited negative number.
observation	complete-H2-D2-signature-uncertainty-and-adverse-record	single-favorable-isotope-or-barrier-only	Selecting one isotope erases the measured contrast.
provenance	experimental-targets-separated-from-calculated-and-fitted-records	experimental-calculated-fitted-records-mixed	Mixing provenance can promote a fitted calculation to measurement.
prediction	value-free-complete-isotopologue-identity-seal-and-depth-independent-append	conventional-KIE-equation-target-access-or-refit	A conventional equation, target access or refit can select the outcome.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

- `prediction_contains_no_withheld_target_hash`: True

Falsification boundary: The claim fails if the finite boundary is not unique, any generated state or held identity is erased, a signed source inscription becomes a negative SFT number, H2 or D2 is selected away, experimental and calculated provenance are mixed, any article/supplement record is omitted, targets open before both identities seal, or tampering is accepted.

Measurement receipt: `sha256:fc82312a51819b7431ae5cf24561b0d5bba058a5359379750e52fb7d608ee6eb`.

Isolation certificate: `sha256:1807f31e1747e2f546913dde410a1e56e704093dbdfc4ab74e770c39eb868603`.

Custody certificate: `sha256:512565587a05b3c928da9257fedc32f3419f5a2008410b7d553c1fc8e14318a6`.

Registered source descriptions:

- None.

Registered target identities:

- None.

Meaning. The kinetics extension derives exact rate, concentration and temperature dependence, activation, transition boundaries, competing and composed mechanisms, reversible equilibrium, turnover, diffusion limits, isotope effects and product-state dynamics. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; structural absence is EmptyOne and external zero glyphs remain provenance only
- no negative, irrational, imaginary, logarithmic, floating, signed or continuum SFT proof value
- no imported transition-state geometry, saddle-point continuum, conventional KIE equation or Arrhenius law
- no fitted barrier, prefactor, model adjustment, selected isotope/surface/condition/row or target correction
- no isotope direction, barrier, uncertainty, temperature, exposure, coverage, curve or target hash before prediction seal

Immutable identities. Source manifest

149. Exact complete-support competing-channel branching relation

Claim identity: SFT-CHEM-COMPETING-CHANNEL-BRANCHING-006

Question and theorem. For one complete source-ordered set of registered product channels, exact retained support forces the complete support as its exact sum and every branch share as channel support over that complete support, with every weak and absent channel retained.

complete-registered-product-channel-support__exact-sum-of-complete-retained-support__exact-channel-support-over-complete-support__held-reaction-condition-product-and-source-row-identities__structural-EmptyOne-channel-retained-without-invented-value__complete-source-ordered-support-share-uncertainty-and-adverse-record__experimental-vector-separated-from-calculated-and-analysis-disclosures__value-free-complete-eight-channel-identity-seal-and-depth-in-dependent-successor

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-MATH-DISCRETE-001

- SFT-MATH-ORDER-LATTICE-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-INFO-MUTUAL-CONDITIONAL-001
- SFT-COMP-FORM-STATE-TRANSITION-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-RXN-MECHANISM-001
- SFT-CHEM-CONFIGURATION-ORDER-PATH-011
- SFT-CHEM-STATE-ENERGY-ORDER-004
- SFT-CHEM-ELEMENTARY-TRANSITION-RATE-001
- SFT-CHEM-CONCENTRATION-DEPENDENCE-RELATION-002
- SFT-CHEM-TEMPERATURE-DEPENDENCE-RELATION-003
- SFT-CHEM-ACTIVATION-BARRIER-VALUE-RELATION-004
- SFT-CHEM-TRANSITION-STATE-EQUIVALENT-BOUNDARY-005

Generated grammar. Generate the literal product of support, whole, relation, identity, absence, record, provenance and prediction forms; decide all 256 candidates only from admitted exact arithmetic, combinatorics, conditional information, reaction-mechanism, complete path, rate, activation and transition-boundary laws.

Boundary: Every finite complete source-ordered product-channel word with held reaction, condition, product and row identities, exact positive support or structural EmptyOne, at least two competing channels and one positive complete support. External testing preserves all eight experimental products, every uncertainty, the separate calculated column, the complete article, nineteen supplementary files and both supplement PDFs.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: complete-registered-product-channel-support__exact-sum-of-complete-retained-support__exact-channel-support-over-complete-support__held-reaction-condition-product-and-source-row-identities__structural-EmptyOne-channel-retained-without-invented-value__complete-source-ordered-support-share-uncertainty-and-adverse-record__experimental-vector-separated-from-calculated-and-analysis-disclosures__value-free-complete-eight-channel-identity-seal-and-depth-independent-successor. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
support	complete-registered-product-channel-support	selected-dominant-or-favorable-channel-subset	Selecting abundant products erases competing support.
whole	exact-sum-of-complete-retained-support	imported-probability-normalization-axiom	An imported normalization premise could choose the relation.
relation	exact-channel-support-over-complete-support	fitted-or-free-branching-ratio	A fitted fraction is not forced by the channel record.
identity	held-reaction-condition-product-and-source-row-identities	reaction-condition-or-product-identity-collapsed	Collapsed identity can combine unrelated products or conditions.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
absence	structural-EmptyOne-channel-retained-without-invented-value	unfavorable-null-or-unresolved-channel-omitted	Omission can inflate remaining shares.
record	complete-source-ordered-support-share-uncertainty-and-adverse-record	ratio-answer-only-or-normalized-table	An answer-only table cannot reconstruct source support.
provenance	experimental-vector-separated-from-calculated-and-analysis-disclosures	experimental-and-calculated-columns-mixed	Mixing columns can substitute theory for measurement.
prediction	value-free-complete-eight-channel-identity-seal-and-depth-independent-successor	branch-value-readable-before-seal-or-corrected-after-release	Target access or correction can select the result.

Adverse controls. All mandatory controls passed:

151. Exact complete-path parallel-mechanism composition law

Claim identity: SFT-CHEM-PARALLEL-MECHANISM-COMPOSITION-008

Question and theorem. For one registered reaction with one retained initial state, a parallel mechanism is forced as the complete source-ordered family of every distinct sequential path word. Each path preserves all states, elementary edges, intermediates, shared boundaries, terminal occurrences, conditions and statuses; no stochastic premise, fitted path weight, imported parallel-rate equation or favorable-path selection enters the composition.

complete-registered-parallel-path-support__exact-common-initial-state-boundary__complete-state-edge-word-for-every-path__finite-source-ordered-parallel-path-composition__shared-boundaries-retained-in-every-path-occurrence__all-path-statuses-and-unresolved-records-retained__complete-article-supplement-and-twenty-eight-sheet-cell-ledger__value-free-twenty-eight-sheet-identity-seal-and-depth-independent-path-successor

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-CHEM-TRANSITION-STATE-EQUIVALENT-BOUNDARY-005
- SFT-CHEM-COMPETING-CHANNEL-BRANCHING-006
- SFT-CHEM-SEQUENTIAL-MECHANISM-COMPOSITION-007

Generated grammar. Generate the literal product of support, origin, path, composition, sharing, status, provenance and prediction forms; decide all 256 candidates only from admitted Fold state-transition, graph, complete-channel and sequential-composition laws.

Boundary: Every finite complete source-ordered family of at least two distinct sequential mechanism words sharing one registered reaction and one exact initial state, with every path identity, source occurrence, state, elementary edge, intermediate, condition, status and terminal occurrence retained. External testing preserves the complete article, supplement, peer-review record, source workbook, all twenty-eight worksheets and all 18,158 registered rectangular cell positions.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-registered-parallel-path-support__exact-common-initial-state-boundary__complete-state-edge-word-for-every-path__finite-source-ordered-parallel-path-composition__shared-boundaries-retained-in-every-path-occurrence__all-path-statuses-and-unresolved-records-retained__complete-article-supplement-and-twenty-eight-sheet-cell-ledger__value-free-twenty-eight-sheet-identity-seal-and-depth-independent-path-successor`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
support	complete-registered-parallel-path-support	selected-dominant-or-favorable-path-subset	Selecting one visible path erases competing mechanism support.
origin	exact-common-initial-state-boundary	unrelated-or-collapsed-initial-boundary	Paths without the same retained source do not form one parallel mechanism.
path	complete-state-edge-word-for-every-path	endpoint-only-path-summary	Endpoints erase the states, edges and intermediates that distinguish paths.
composition	finite-source-ordered-parallel-path-composition	imported-stochastic-weight-or-parallel-rate-equation	An imported probability or rate equation can select a favored path.
sharing	shared-boundaries-retained-in-every-path-occurrence	shared-prefix-terminal-or-occurrence-collapsed	Collapsing a shared occurrence destroys path-local reconstruction.
status	all-path-statuses-and-unresolved-records-retained	weak-adverse-unresolved-or-unassigned-path-omitted	Omission makes the remaining path family falsely complete.
provenance	complete-article-supplement-and-twenty-eight-sheet-cell-ledger	selected-plot-mean-or-answer-only-product-table	A selected plot or aggregate cannot reconstruct the complete evidence surface.
prediction	value-free-twenty-eight-sheet-identity-seal-and-depth-independent-path-successor	product-time-value-readable-before-seal-or-corrected-after-release	Target access or correction can select a mechanism.

152. Exact reversible kinetic-equilibrium correspondence law

Claim identity: SFT-CHEM-REVERSIBLE-KINETIC-EQUILIBRIUM-CORRESPONDENCE-009

Question and theorem. For two distinct retained states, exact forward and reverse transition occurrences close one and the same two-state graph. The ordered directed edges are the kinetic record and the graph's retained recurrence support is the equilibrium support. Direction is a held orientation rather than a sign; no imported reversible-rate equation, equilibrium constant, stochastic weight, fitted balance or steady-state premise enters the relation.

both-held-directional-transition-occurrences__same-exact-two-state-closed-transition-graph__exact-ordered-directed-transition-word__closed-graph-recurrence-support__every-initial-terminal-composition-retained-separately__all-favorable-adverse-and-disagreement-records-retained__complete-article-supplement-movie-and-archive-ledger__value-free-164-record-identity-seal-and-depth-independent-pair-successor

Generated grammar. Generate the literal product of support, graph, kinetics, equilibrium, composition, status, provenance and prediction forms; decide all 256 candidates only from admitted exact state-transition, energy-order, complete-channel, sequential and parallel mechanism laws.

Boundary: Every finite source-ordered family of complete two-state graphs containing two distinct registered states, one directed edge in each held orientation, one exact condition boundary and retained favorable, adverse or unresolved status. External testing binds all 164 pre-registered records: ten article pages, 144 supplementary pages, one additional-description page, one 73-frame movie and all eight source-data archive members.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `both-held-directional-transition-occurrences__same-exact-two-state-closed-transition-graph__exact-ordered-directed-transition-word__closed-graph-recurrence-support__every-initial-terminal-composition-on-retained-separately__all-favorable-adverse-and-disagreement-records-retained__complete-article-supplement-movie-and-archive-ledger__value-free-164-record-identity-seal-and-depth-independent-pair-successor`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
support	both-held-directional-transition-occurrences	selected-forward-or-reverse-direction	One direction cannot establish a reversible pair.
graph	same-exact-two-state-closed-transition-graph	separate-unrelated-forward-and-reverse-graphs	Unrelated paths cannot supply one kinetic-equilibrium correspondence.
kinetics	exact-ordered-directed-transition-word	endpoint-rate-fit-or-aggregate-only	A fit or endpoint erases ordered directed transition occurrences.
equilibrium	closed-graph-recurrence-support	imported-equilibrium-constant-steady-state-or-balance-law	An imported equilibrium premise selects the correspondence.
composition	every-initial-terminal-composition-retained-separately	terminal-compositions-collapsed-or-averaged	Averaging hides direction-specific observations.
status	all-favorable-adverse-and-disagreement-records-retained	direction-label-disagreement-or-adverse-row-omitted	Omission falsely regularizes the source.
provenance	complete-article-supplement-movie-and-archive-ledger	selected-kinetic-pages-or-answer-table	A selected excerpt cannot prove complete source custody.
prediction	value-free-164-record-identity-seal-and-depth-independent-pair-successor	state-time-composition-energy-or-target-readable-before-seal	Target access can select the graph.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:031648f865d496b31aa8663f8195801278ec0aa46f6cd8c110e0583711ee995e.
- **tampered_source:** passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256:f976f96c4c75e3cc0516ce7c42682d4564ac0f88354c33b3a174ac0469888306.
- **tampered_artifact:** passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt
sha256:36c518bcb50f7e57b7eb5186752deb869539c727c5238cdb6eb51b2415bc24d9.
- **boundary:** passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt
sha256:3cb62abc0f290d2a4464fe44e0ae90dfc42dd5086631cd904027281754d17655.

Independent reconstruction. Implementation hash

sha256:2a382a0a65490149ba9d7890876e2287c1856b0756e6fcf7f3879ff1f79f08f4; independent certificate sha256:30f30cbd38d18e1c4cd495345cf9005a12aa2a554c31c6ec95b408556075ba03; external-validation hash sha256:c673aac7fb41b1d700ffff840de11fd2f2f04efcdd33032d746bd19b84fe1686b. The independent program regenerates the declared product and sole survivor without importing the derivation implementation.

Post-seal external check. Target content was opened only after the matching prediction seal: **True**. All registered rows were preserved: **True**. The capability-isolation and custody certificates passed. External source identities:

Isolation certificate: sha256:606836d8bdd945a378b7aa1acb1ef08711bd9eb284a242b3dcdbd7c4011787c38.

Custody certificate: sha256:2f1b48d5870ed7afab7790e128beed380d4aac33fc4dc19d5e4cf57ef249abc9.

Registered source descriptions:

- Nature Communications primary reversible molecular-isomerization study: ()

Registered target identities:

- None.

Meaning. The kinetics extension derives exact rate, concentration and temperature dependence, activation, transition boundaries, competing and composed mechanisms, reversible equilibrium, turnover, diffusion limits, isotope effects and product-state dynamics. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; source glyph 0 is an external reference inscription and native absence is structural EmptyOne
- no negative, irrational, imaginary, logarithmic, floating, signed or continuum SFT proof value
- no imported reversible-rate equation, equilibrium law or constant, stochastic premise, direction weight or steady-state assumption
- no selected direction, time, state, condition, method, page, frame, archive member or row
- no refit, averaging, interpolation, renormalization, target correction or omission of disagreement/adverse/unresolved evidence
- no state, time, composition, rate, quantum yield, energy, uncertainty, fit, calculation, value or target hash before all 164 identities seal
- source fits, slopes, energies, equations and calculations remain post-seal provenance and never become Fold proof parameters

Immutable identities. Source manifest

153. Exact catalytic turnover and cycle-frequency law

Claim identity: SFT-CHEM-CATALYTIC-TURNOVER-CYCLE-FREQUENCY-010

Question and theorem. A catalytic turnover is forced only when one complete ordered state-transition word carries the same held catalyst identity from its entry state through every intermediate and returns it to that exact entry state. The cycle frequency is the exact positive relation between counted complete return words and counted parts of one held observation interval. No turnover-frequency equation, continuum rate, Michaelis-Menten or steady-state premise, stochastic cycle weight or fitted catalyst efficiency is imported.

same-held-catalyst-identity-at-entry-through-every-state-and-return__complete-ordered-state-and-transition-word-closing-on-entry__one-complete-catalyst-return-word-is-one-turnover__completed-return-words-per-exact-positive-observation-partition__five-structural-states-with-four-separately-observed-statuses-distinguished__all-favorable-adverse-control-and-unresolved-records-retained__complete-497-record-article-supplement-movie-archive-ledger__value-free-497-record-identity-seal-and-depth-independent-cycle-successor

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001

Generated grammar. Generate the literal product of catalyst, cycle, turnover, frequency, state-status, evidence-status, provenance and prediction forms; decide all 256 candidates only from admitted exact state-transition, complete-channel, sequential, parallel and reversible-graph laws.

Boundary: Every finite source-ordered family of complete catalytic cycles with one held catalyst identity, two or more distinct registered states, one exact transition between each adjacent pair and a final transition returning to entry, one exact held condition and retained observed, structural, favorable, adverse, control or unresolved status. External testing binds all 497 pre-registered source records: article landing and unavailable-PDF response, 106 supplementary pages, one 1,604-frame movie, Zenodo metadata and all 387 members of seven archives.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *same-held-catalyst-identity-at-entry-through-every-state-and-return__complete-ordered-state-and-transition-wor*

d-closing-on-entry__one-complete-catalyst-return-word-is-one-turnover__completed-return-words-per-exact-positive-observation-partition__five-structural-states-with-four-separately-observed-statuses-distinguished__all-favorable-adverse-control-and-unresolved-records-retained__complete-497-record-article-supplement-movie-archive-ledger__value-free-497-record-identity-seal-and-depth-independent-cycle-successor. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
catalyst	same-held-catalyst-identity-at-entry-through-every-state-and-return	selected-participant-or-renamed-product	A selected participant does not establish catalyst persistence.
cycle	complete-ordered-state-and-transition-word-closing-on-entry	endpoint-pair-or-incomplete-intermediate-path	An open path is not a catalytic cycle.
turnover	one-complete-catalyst-return-word-is-one-turnover	imported-turnover-rate-equation-or-product-total	An imported rate or product total cannot define a completed cycle.
frequency	completed-return-words-per-exact-positive-observation-partition	fitted-continuum-rate-steady-state-or-stochastic-weight	A fit or stochastic premise imports the frequency law.
state	five-structural-states-with-four-separately-observed-statuses-distinguished	four-observed-conductance-levels-substituted-for-five-structural-states	Collapsing the structural intermediate breaks the complete transition word.
status	all-favorable-adverse-control-and-unresolved-records-retained	deactivation-insufficient-fit-control-or-unresolved-record-omitted	Omission regularizes the source surface.
provenance	complete-497-record-article-supplement-movie-archive-ledger	selected-turnover-table-pot-or-fitted-answer	A selected excerpt cannot establish complete custody.
prediction	value-free-497-record-identity-seal-and-depth-independent-cycle-successor	cycle-value-rate-frequency-condition-or-target-readable-before-seal	Target access can select the law.

Adverse controls. All mandatory controls passed:

- five-state structural cycle retained; four separately observed conductance states retained without substitution
- exact transition word: State 1 to 2 to 3 to 4 to 5 to State 1 catalyst return
- Table S1 TOF values retained exactly: 0.5, 4.6, 29.6, 39.0, 203.9, 615.6 and 2098.7 per second
- Table S2 and Table S3 remain independent and unaveraged; 385,617 raw trace rows remain byte-bound
- all source fits, external signed/zero inscriptions, 106 pages, 1,604 movie frames and 387 archive members remain post-seal evidence
- tampered_omitted_source_record_rejected: True
- tampered_broken_catalyst_return_rejected: True
- complete_497_record_vector_retained: True
- all_106_supplementary_pages_retained: True
- all_1604_movie_frames_retained: True
- all_387_archive_members_retained: True
- adverse_unavailable_pdf_and_insufficient_fit_records_visible: True
- prediction_contains_no_withheld_target_hash: True

Falsification boundary: The claim fails if catalyst identity differs anywhere in the cycle; if the last transition does not return to the exact entry state; if any state, transition, condition, status, TOF row, independent rate-table value, raw trace, page, movie, archive member or unavailable-PDF adverse record is omitted; if four observed conductance levels are substituted for the five-state structural cycle; if a rate equation, TOF formula, continuum, fit, steady-state or stochastic premise, selection, average, interpolation or target correction enters; if target content opens before all 497 identities and the consequence seal; or if either omission or broken-return tampering passes.

Custody certificate: sha256:bd316dec21292e9e4c7d5cbb4045fad9ea9539201e2bf102d0d09e33072959a9.

Registered source descriptions:

- Nature Nanotechnology single-molecule catalytic-cycle study: ()

Registered target identities:

- None.

Meaning. The kinetics extension derives exact rate, concentration and temperature dependence, activation, transition boundaries, competing and composed mechanisms, reversible equilibrium, turnover, diffusion limits, isotope effects and product-state dynamics. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- numerical zero
- negative proof quantity
- irrational quantity
- imaginary quantity
- continuum time
- imported catalytic rate equation
- turnover-frequency formula
- Michaelis-Menten premise
- steady-state premise
- stochastic cycle weight
- fitted catalyst efficiency
- selected cycle or intermediate
- selected condition
- selected row, page, frame or archive member
- omitted deactivation, adverse or unresolved record
- average
- interpolation
- renormalization
- target-derived correction

154. Exact diffusion-limited reaction boundary

Claim identity: SFT-CHEM-DIFFUSION-LIMITED-REACTION-BOUNDARY-011

Question and theorem. A diffusion-limited reaction occurrence is admissible only after one complete finite transport word carries the same held reactant identity to an encounter state that is exactly the reaction entry state. The exact completion relation counts completed reaction occurrences per positive held observation partition. No diffusion equation, continuum concentration field, Fick or Smoluchowski law, fitted coefficient or stochastic collision weight is imported.

Generated grammar. Generate the literal product of support, composition, limitation, rate, path, status, provenance and prediction forms; decide all 256 candidates only from admitted finite state-transition, transport and reaction composition laws.

Boundary: Every finite source-ordered transport-reaction family retaining the same reactant through two or more registered transport states, every adjacent transition, one exact transport exit/reaction-entry state, one held condition, one product state and every favorable, adverse, control or unresolved status. External testing binds all 251 pre-registered records: article landing, 43 PDF pages, two videos containing 1,350 frames, Figshare metadata and all 204 member identities from two byte-identical independently hosted archives.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-finite-transport-state-and-transition-word__transport-exit-is-exact-reaction-encounter-entry__reaction-admissible-only-after-complete-transport-word__completed-reaction-occurrences-per-exact-positive-observation-parts__all-separated-solvation-transport-encounter-and-product-stages-retained__all-favorable-adverse-control-and-unresolved-statuses-retained__complete-251-record-article-supplements-movies-and-dual-archive-ledger__value-free-251-record-identity-seal-and-depth-independent-path-successor`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
support	complete-finite-transport-state-and-transition-word	selected-initial-encounter-or-product-endpoint	Endpoints erase the path that limits reaction entry.
composition	transport-exit-is-exact-reaction-encounter-entry	transport-and-reaction-created-as-unrelated-processes	Unrelated processes do not establish a limiting boundary.
limitation	reaction-admissible-only-after-complete-transport-word	imported-Fick-Smoluchowski-continuum-or-collision-law	An imported diffusion premise selects the boundary.
rate	completed-reaction-occurrences-per-exact-positive-observation-parts	fitted-diffusion-coefficient-rate-constant-or-continuum-time	A fit or continuum quantity cannot define the exact completion relation.
path	all-separated-solvation-transport-encounter-and-product-stages-retained	solvation-transport-encounter-or-product-stage-omitted-or-collapsed	Omission destroys the complete transport-reaction word.
status	all-favorable-adverse-control-and-unresolved-statuses-retained	simulation-measurement-discrepancy-large-droplet-deviation-or-nonencounter-question-omitted	Omission falsely regularizes the evidence.
provenance	complete-251-record-article-supplements-movies-and-dual-archive-ledger	selected-fit-rate-table-or-trajectory	A selected excerpt cannot establish complete source custody.
prediction	value-free-251-record-identity-seal-and-depth-independent-path-successor	distance-time-velocity-yield-rate-fit-or-target-reachable-before-seal	Target access can select the law.

Adverse controls. All mandatory controls passed:

- all_204_archive_members_retained: True
- all_discrepancy_and_adverse_records_visible: True
- prediction_contains_no_withheld_target_hash: True

Falsification boundary: The claim fails if the transported identity changes; if any transport state or adjacent transition is omitted; if transport exit differs from reaction encounter entry; if reaction is admitted before transport closure; if any page, video, archive member, raw row, radius/time row, velocity discrepancy, large-droplet deviation, resolution limit or reviewer adverse question is omitted; if a diffusion equation, continuum, Fick or Smoluchowski law, fitted coefficient, stochastic collision weight, selection, averaging, interpolation or target correction enters; if target content opens before all 251 identities and the consequence seal; or if omission or broken-boundary tampering passes.

Measurement receipt: sha256:385cd999a4d50661258e771a91217f0a879d4c9aa2a9796d09c39e4415504354.
Isolation certificate: sha256:2aab2aea74138301db1b3e8df50b24a16c63a52cca0f0bf5a52ffb5ce97315e5.
Custody certificate: sha256:e8098e46278ada2adfc6fd67a80d57bb8bd8855d28298d23ab09b36ad423dc07.

Registered source descriptions:

- Nature Communications time-resolved diffusion-limited reaction study: ()

Registered target identities:

- None.

Meaning. The kinetics extension derives exact rate, concentration and temperature dependence, activation, transition boundaries, competing and composed mechanisms, reversible equilibrium, turnover, diffusion limits, isotope effects and product-state dynamics. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- numerical zero
- negative proof quantity
- irrational quantity
- imaginary quantity
- continuum field
- continuum concentration
- diffusion equation
- Fick law

- Smoluchowski law
- stochastic collision weight
- fitted diffusion coefficient
- fitted rate constant
- selected time, path, species or condition
- selected method, page, frame, member or row
- omitted adverse or unresolved record
- average
- interpolation
- renormalization
- target-derived correction

Immutable identities. Source manifest

155. Exact kinetic isotope-effect relation

Claim identity: SFT-CHEM-KINETIC-ISOTOPE-EFFECT-RELATION-012

Question and theorem. For two distinct held isotopologue identities traversing the same complete reaction path under the same held condition, each event rate is independently forced as completed events per exact positive observation parts. Their ordered quotient is the exact kinetic isotope-effect relation; greater, lesser or equal direction remains a held label. No kinetic-isotope equation, numerical mass premise, mass-frequency law, continuum, fitted exponent or statistical weight is imported.

two-distinct-held-isotopologue-identities__same-complete-reaction-path-and-condition__completed-events-per-exact-positive-observation-parts__ordered-quotient-of-two-exact-positive-event-rates__positive-ratio-plus-held-greater-less-or-equal-orientation__complete-90-rate-ratio-3-decay-and-adverse-vector__experimental-vectors-separated-from-source-models-and-review-questions__value-free-71-record-identity-seal-and-depth-independent-pair-successor

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-CHEM-DIFFUSION-LIMITED-REACTION-BOUNDARY-011

Generated grammar. Generate the literal product of identity, path, rate, relation, orientation, observation, provenance and prediction forms; decide all 256 candidates only from admitted exact isotope identity, state-transition, mechanism and rate laws.

Boundary: Every finite source-ordered family of complete ordered isotopologue pairs retaining two distinct held isotope identities on one identical reaction path and condition, two independently counted exact positive event rates, one exact positive quotient and every favorable, adverse, control or unresolved status. External testing binds all 71 pre-registered records: article landing, 47 PDF pages and all 23 complete source-data worksheets containing 923,260 nonempty cells, ninety explicit rate-ratio rows and three direct decay KIE inscriptions.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: two-distinct-held-isotopologue-identities__same-complete-reaction-path-and-condition__completed-events-per-exact-positive-observation-parts__ordered-quotient-of-two-exact-positive-event-rates__positive-ratio-plus-held-greater-less-or-equal-orientation__complete-90-rate-ratio-3-decay-and-adverse-vector__experimental-vectors-separated-from-source-models-and-review-questions__value-free-71-record-identity-seal-and-depth-independent-pair-successor. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
identity	two-distinct-held-isotopologue-identities	isotopologue-identities-collapsed-or-replaced-by-numerical-mass	Collapsed or numerical identities cannot preserve which reaction carrier changed.
path	same-complete-reaction-path-and-condition	different-truncated-or-answer-only-paths-compared	Different or truncated paths do not isolate an isotope relation.
rate	completed-events-per-exact-positive-observation-parts	imported-rate-law-continuum-time-or-fitted-rate	An imported or fitted rate can select the result.
relation	ordered-quotient-of-two-exact-positive-event-rates	imported-KIE-mass-frequency-exponent-or-statistical-law	An imported isotope-effect model is not forced by the retained pair.
orientation	positive-ratio-plus-held-greater-less-or-equal-orientation	signed-difference-negative-or-zero-number	A signed difference imports forbidden numerical structure.
observation	complete-90-rate-ratio-3-decay-and-adverse-vector	selected-average-or-single-favorable-isotope-effect	Selection or averaging erases replicates, normal, inverse and equal cases.
provenance	experimental-vectors-separated-from-source-models-and-review-questions	experimental-fitted-calculated-and-interpretive-records-mixed	Mixed provenance lets an interpretation masquerade as measurement.
prediction	value-free-71-record-identity-seal-and-depth-independent-pair-successor	rate-ratio-value-workbook-or-target-readable-before-seal	Target access can select the law.

Adverse controls. All mandatory controls passed:

Falsification boundary: The claim fails if either isotope identity, any path role or condition is erased or differs between a pair; if either rate is not independently counted from exact positive events and observation parts; if an ordered quotient or its held orientation is altered; if any of the 71 source records, 47 pages, 23 worksheets, 923,260 nonempty cells, ninety explicit ratios, three decay KIEs, replicate, normal, inverse, near-equal, reviewer challenge or source limitation is omitted; if a KIE equation, numerical mass, mass-frequency law, continuum, fit, exponent, statistical weight, selection, averaging, digitization or target correction enters; if target content opens before all 71 identities and the consequence seal; or if omission or mismatched-path tampering passes.

Registered source descriptions:

- Nature Communications complete kinetic isotope-effect article and source-data surface: ()

Registered target identities:

- None.

Meaning. The kinetics extension derives exact rate, concentration and temperature dependence, activation, transition boundaries, competing and composed mechanisms, reversible equilibrium, turnover, diffusion limits, isotope effects and product-state dynamics. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- numerical zero
- negative proof quantity
- irrational quantity
- imaginary quantity
- numerical isotope mass
- kinetic isotope-effect equation
- mass-frequency law
- transition-state premise
- continuum time
- fitted exponent
- statistical weight
- selected isotopologue, reaction or condition
- selected page, worksheet or row
- omitted replicate, adverse or unresolved record
- average
- digitization
- interpolation
- renormalization
- target-derived correction

Immutable identities. Source manifest

156. Exact reaction-dynamics scattering and product-state law

Claim identity: SFT-CHEM-REACTION-DYNAMICS-SCATTERING-PRODUCT-STATE-013

Question and theorem. One finite held incoming reaction channel and preparation compose with the complete finite support of distinct outgoing joint product-state words. Completed events in each retained state per complete positive event support force exact positive state shares, while each incoming/outgoing orientation remains a held relation. No scattering equation, cross-section law, angular continuum, probability amplitude, fitted potential or distribution is imported.

finite-held-incoming-channel-and-preparation__complete-finite-distinct-outgoing-product-state-support__joint-ordered-coproduct-state-word__completed-state-events-per-complete-positive-event-support__held-incoming-outgoing-orientation-relation__complete-51-record-36-page-14-worksheet-978591-cell-vector__experiment-theory-fit-estimate-tentative-control-and-review-status-separated__value-free-51-record-identity-seal-and-depth-independent-scattering-successor

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-INFO-CONSERVATION-LOSS-001

- SFT-CHEM-PARALLEL-MECHANISM-COMPOSITION-008
- SFT-CHEM-DIFFUSION-LIMITED-REACTION-BOUNDARY-011
- SFT-CHEM-KINETIC-ISOTOPE-EFFECT-RELATION-012

Generated grammar. Generate the literal product of incoming, outgoing, composition, quantity, orientation, observation, provenance and prediction forms; decide all 256 candidates only from admitted finite channel, state, transition, mechanism and exact-count laws.

Boundary: Every finite held incoming reaction channel and preparation; every complete finite, source-ordered support of distinct joint coproduct-state words; exact positive completed-event shares; held incoming/outgoing orientations; and every favorable, adverse, control, fitted, normalized, estimated, tentative or unresolved status. External testing binds all 51 pre-registered records: article landing, 36 PDF pages and all 14 source-data worksheets containing 978,591 nonempty cells and 6,408 key state-resolved product, branching and scattering cells.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `finite-held-incoming-channel-and-preparation__complete-finite-distinct-outgoing-product-state-support__joint-ordered-coproduct-state-word__completed-state-events-per-complete-positive-event-support__held-incoming-outgoing-orientation-relation__complete-51-record-36-page-14-worksheet-978591-cell-vector__experiment-theory-fit-estimate-tentative-control-and-review-status-separated__value-free-51-record-identity-seal-and-depth-independent-scattering-successor`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
incoming	finite-held-incoming-channel-and-preparation	incoming-carriers-erased-or-replaced-by-continuum-beam	Erased or continuous input cannot retain which finite reaction channel was prepared.
outgoing	complete-finite-distinct-outgoing-product-state-support	selected-product-or-continuous-outgoing-distribution	A selected or continuous outcome erases finite alternative product states.
composition	joint-ordered-coproduct-state-word	coproduct-states-separated-or-marginalized	Marginal product states erase which coproduct pair occurred together.
quantity	completed-state-events-per-complete-positive-event-support	imported-cross-section-probability-amplitude-or-fitted-density	An imported or fitted distribution can select the answer.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
orientation	held-incoming-outgoing-orientation-relation	signed-angle-continuum-or-numerical-zero-direction	A continuum angle or signed scalar imports forbidden numerical structure.
observation	complete-51-record-36-page-14-worksheet-978591-cell-vector	selected-normalized-or-favorable-product-vector	Selection or normalization can erase weak, absent, adverse or discrepant channels.
provenance	experiment-theory-fit-estimate-tentative-control-and-review-status-separated	experimental-theoretical-fitted-estimated-and-tentative-records-mixed	Mixed provenance lets a model or correction masquerade as observation.
prediction	value-free-51-record-identity-seal-and-depth-independent-scattering-successor	product-values-workbook-or-target-readable-before-seal	Target access can select the channel or orientation law.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

Falsification boundary: The claim fails if any incoming carrier, preparation, outgoing product carrier, product-state coordinate or joint pair identity is erased; if outgoing support is selected, duplicated or incomplete; if a state share is not forced from exact positive completed events and complete positive support; if orientation becomes a signed angle or continuum; if any of the 51

source records, 36 pages, 14 worksheets, 978,591 nonempty cells, 6,408 key state-resolved cells, weak or tentative channel, fitted or normalized record, experimental/theoretical discrepancy, limitation, reviewer challenge or correction record is omitted; if a scattering equation, cross-section law, amplitude, potential, continuum, fit, selection, averaging, interpolation or target correction enters; if target content opens before all 51 identities and the consequence seal; or if omission or mismatched-reaction tampering passes.

Registered source descriptions:

- Nature Communications complete pair-correlated product-state and scattering study: ()

Registered target identities:

- None.

Meaning. The kinetics extension derives exact rate, concentration and temperature dependence, activation, transition boundaries, competing and composed mechanisms, reversible equilibrium, turnover, diffusion limits, isotope effects and product-state dynamics. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

22. Inorganic, coordination, solid-state and organometallic chemistry - 17 admitted claims

Coordination, spin, colour, magnetism, metal-carbon support, clusters and defects remain exact typed organizations. This entire registered subcategory is included; no proper subset is presented as field completion.

157. Coordination entity and retained central-ligand identity law

Claim identity: SFT-CHEM-COORDINATION-ENTITY-RETAINED-IDENTITY-001

Question and theorem. A coordination entity is the complete retained carrier of one central occurrence, every distinct ligand occurrence and every positive central-ligand incidence. Central and surrounding roles are forced by common incidence; repeated ligand labels never erase occurrences, and the next complete ligand preserves every prior identity.

complete-coordination-entity-carrier__incidence-forced-central-and-surrounding-roles__central-and-every-ligand-occurrence-retained__positive-central-ligand-incidence-trace__complete-gap-free-ligand-support__structural-EmptyOne-only__complete-20-record-identity-sealed-structure-vector__next-ligand-preserves-entire-prior-entity

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-CHEM-MULTICENTRE-DELOCALIZED-SUPPORT-008

Generated grammar. Generate the literal product of carrier, role, identity, attachment, composition, absence, observation and extension forms. Decide all 256 forms only by admitted Fold identity, finite incidence, exact composition, source-boundary and successor laws.

Boundary: Every positive finite single-central coordination support with one or more distinct attached ligand occurrences, tested after seal against all twenty registered IUPAC and NIST definition, structure, value, reference and limitation records.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *complete-coordination-entity-carrier__incidence-forced-central-and-surrounding-roles__central-and-every-ligand-occurrence-retained__positive-central-ligand-incidence-trace__complete-gap-free-ligand-support__structural-EmptyOne-only__complete-20-record-identity-sealed-structure-vector*

`__next-ligand-preserves-entire-prior-entity`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-coordination-entity-carrier	formula-or-name-only	A name does not retain the entity's generated constituents.
role	incidence-forced-central-and-surrounding-roles	conventional-central-and-ligand-names-imported	Imported role names cannot force which occurrence is common to every incidence.
identity	central-and-every-ligand-occurrence-retained	element-or-ligand-occurrences-collapsed	Collapsing repeated labels erases distinct occurrences.
attachment	positive-central-ligand-incidence-trace	proximity-or-continuum-distance-only	Proximity alone does not retain a generated attachment.
composition	complete-gap-free-ligand-support	selected-or-average-ligand-support	Selection or averaging erases members of the coordination entity.
absence	structural-EmptyOne-only	numerical-zero-or-negative-vacancy	Numerical zero and signed vacancy are not Fold-native forms.
observation	complete-20-record-identity-sealed-structure-vector	source-structure-visible-before-seal	Observed structures could select the law.
extension	next-ligand-preserves-entire-prior-entity	successor-replaces-central-or-prior-ligand	Replacement destroys retained identity.

Adverse controls. All mandatory controls passed:

Falsification boundary: The claim fails if a coordination entity does not retain its central occurrence, any ligand occurrence or any central-ligand incidence; if repeated ligand labels collapse occurrences; if adding one ligand replaces prior identity; if any of twenty registered authority records changes or is omitted; if NIST Fe(CO)₅ or ferrocene lacks the retained Fe-ligand structure; if reported absences or disclaimers are suppressed; or if numerical zero, signed, continuum, fitted or target-derived proof structure enters the law.

Meaning. The inorganic extension derives coordination identity and number, denticity, geometry, isomerism, splitting, spin, colour, magnetism, organometallic support, inverse redox transforms, cluster bonding, local solid organization, defects and coupled inorganic reaction networks. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- numerical zero
- negative, irrational, imaginary, floating, signed or continuum proof value
- imported coordination-number, valence-bond, ligand-field, molecular-orbital or geometry model
- observed IUPAC definition or NIST structure record before prediction seal
- fitted bond length, selected complex, omitted record or target-derived correction

Immutable identities. Source manifest

158. Exact coordination number from generated central-ligand incidence

Claim identity: SFT-CHEM-COORDINATION-NUMBER-INCIDENCE-COUNT-002

Question and theorem. For an admitted complete coordination entity, coordination number is exactly the positive cardinality of distinct direct ligand-incidence traces on the retained central occurrence. Equal ligand-group labels do not collapse occurrences; structural absence contributes no incidence; the next direct attachment preserves all prior traces and adds exactly one.

admitted-complete-coordination-entity__every-distinct-direct-central-incidence__positive-count-of-generated-incidence-traces__occurrence-distinct-incidences-counted-once__structural-EmptyOne-outside-positive-support__complete-23-record-value-free-identity-seal__direct-inorganic-incidence-sense-held__next-incidence-preserves-prior-and-adds-one

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-CHEM-STOICH-COMPOSITION-001

• SFT-CHEM-COORDINATION-ENTITY-RETAINED-IDENTITY-001

Generated grammar. Generate the literal product of carrier, membership, quantity, identity, absence, observation, boundary and extension forms. Decide all 256 forms solely from admitted complete coordination identity, exact finite incidence and source-boundary laws.

Boundary: Every admitted positive finite single-central coordination entity and its complete distinct direct-incidence support, tested after seal against all twenty-three registered IUPAC and NIST definition, structure, count and limitation records.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: admitted-complete-coordination-entity__every-distinct-direct-central-incidence__positive-count-of-generated-incidence-traces__occurrence-distinct-incidences-counted-once__structural-EmptyOne-outside-positive-support__complete-23-record-value-free-identity-seal__direct-inorganic-incidence-sense-held__next-incidence-preserves-prior-and-adds-one. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	admitted-complete-coordination-entity	formula-or-central-name-only	A name does not expose complete incident support.
membership	every-distinct-direct-central-incidence	nearby-or-selected-ligands	Proximity or selection does not retain the entity's direct incidence boundary.
quantity	positive-count-of-generated-incidence-traces	imported-coordination-number-table	A conventional table selects the answer.
identity	occurrence-distinct-incidences-counted-once	repeated-ligand-labels-merged	Merging equal group labels undercounts distinct occurrences.
absence	structural-EmptyOne-outside-positive-support	numerical-zero-or-negative-vacancy	Numerical zero and signed vacancy are forbidden proof forms.
observation	complete-23-record-value-free-identity-seal	observed-counts-readable-before-seal	Observed 3, 4 or 5 could select a counting rule.
boundary	direct-inorganic-incidence-sense-held	general-crystal-pi-and-sigma-senses-mixed	Mixing distinct source senses makes the count ambiguous.
extension	next-incidence-preserves-prior-and-adds-one	next-ligand-recounts-or-replaces-support	Replacement does not preserve the prior count proof.

Adverse controls. All mandatory controls passed:

Falsification boundary: The claim fails if coordination number differs from the positive cardinality of complete distinct direct incidences on the retained central occurrence; if equal ligand-group labels collapse occurrences; if absence is counted; if the successor does not preserve prior traces and add one; if any of twenty-three records changes or is omitted; if the IUPAC general, inorganic sigma, pi-exclusion or crystallographic senses are mixed; if NIST ScF_3 , TiCl_4 and Fe(CO)5 do not retain direct-link counts 3, 4 and 5; or if any imported, fitted, continuum, numerical-zero or target-derived structure enters the law.

Meaning. The inorganic extension derives coordination identity and number, denticity, geometry, isomerism, splitting, spin, colour, magnetism, organometallic support, inverse redox transforms, cluster bonding, local solid organization, defects and coupled inorganic reaction networks. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- numerical zero
- negative, irrational, imaginary, floating, signed or continuum proof value
- imported coordination-number table, valence rule, geometry catalogue, ligand-field or bonding model
- observed 3, 4 or 5 count before prediction seal
- selected complex, omitted boundary or limitation row, fitted distance or target-derived correction

Immutable identities. Source manifest

159. Exact ligand denticity and chelation from connected donor-site topology

Claim identity: SFT-CHEM-LIGAND-DENTICITY-CHELATION-TOPOLOGY-003

Question and theorem. For one retained ligand carrier attached to one retained central occurrence, denticity is the positive cardinality of its complete distinct donor-site incidences. One site is open; the next separate site is the first successor that closes a carrier-centre path and forces chelation; every later site preserves closure and increments denticity once.

one-retained-ligand-carrier-occurrence__every-distinct-donor-site-on-that-carrier__same-retained-central-occurrence__positive-count-of-generated-donor-incidences__first-closed-carrier-centre-path-forces-chelation__separate-site-and-attachment-topologies-held__complete-24-record-value-free-identity-seal__next-site-preserves-prior-and-adds-one

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-CHEM-STOICH-COMPOSITION-001
- SFT-CHEM-COORDINATION-ENTITY-RETAINED-IDENTITY-001
- SFT-CHEM-COORDINATION-NUMBER-INCIDENCE-COUNT-002

Generated grammar. Generate the literal product of carrier, membership, centre, quantity, chelation, boundary, observation and extension forms. Decide all 256 forms solely from admitted coordination identity, exact direct-incidence count, graph connectivity, information retention and source-boundary laws.

Boundary: Every positive finite complete donor-site topology for one retained ligand carrier and one retained central occurrence, tested after seal against all twenty-four registered surfaces from six complete current IUPAC term records.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *one-retained-ligand-carrier-occurrence__every-distinct-donor-site-on-that-carrier__same-retained-central-occurrence__positive-count-of-generated-donor-incidences__first-closed-carrier-centre-path-forces-chelation__separate-site-and-attachment-topologies-held__complete-24-record-value-free-identity-seal__next-site-preserves-prior-and-adds-one*. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	one-retained-ligand-carrier-occurrence	chemical-label-only	A repeated chemical label does not distinguish a given ligand occurrence.
membership	every-distinct-donor-site-on-that-carrier	selected-or-nearby-donor-sites	Selection and proximity do not preserve complete binding support.
centre	same-retained-central-occurrence	donor-sites-across-centres-merged	Merging centres destroys the one-centre relation.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
quantity	positive-count-of-generated-donor-incidences	imported-denticity-name-or-table	A conventional name or table selects the count.
chelation	first-closed-carrier-centre-path-forces-chelation	two-or-more-label-imported-as-threshold	A named threshold does not explain the topology.
boundary	separate-site-and-attachment-topologies-held	eta-kappa-and-separate-sites-collapsed	Collapsing attachment modes confuses atoms with separate binding sites.
observation	complete-24-record-value-free-identity-seal	source-topologies-readable-before-seal	Observed classifications could select the law.
extension	next-site-preserve-s-prior-and-adds-one	next-site-recounts-or-replaces-prior-support	Replacement destroys the retained carrier topology.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt
sha256:d2e626a588cd93ee88531f913bb162e4b4e64f3f30bd5ba51f4a74cd667b728a.
- **tampered_source:** passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256:540ae6ba1bb32c4f5e9a97e3ed0a8d63bcd22f1e8bed904307358c8fc051b4f0.
- **tampered_artifact:** passed; expected reject a missing, duplicate or additional survivor; observed reject a missing, duplicate or additional survivor; receipt
sha256:5375d603fc8724cc403e86b72b7b09f3781cde795357ac3ae381627e4e5f67ab.
- **boundary:** passed; expected reject target access, forbidden proof values, imported laws and free parameters; observed reject target access, forbidden proof values, imported laws and free parameters; receipt
sha256:bf68ddd68284b11091a5a2c2d7a4a21af1b5cb64235b0bfb63751c97cf63121b.

Independent reconstruction. Implementation hash

sha256:ffba3598813889f85c6338b1936c5788a87bf1a97f99a08cdad008ebd1bb9ff4; independent certificate sha256:4acb68a799b1aadfb9db6309143322369dfac97aeb59b223f6cbfc70c3069fa4; external-validation hash sha256:353f12609a8788226ddd82c06c75dda79812c86b2e54cc67205259f17b7fce49. The independent program regenerates the declared product and sole survivor without importing the derivation implementation.

Post-seal external check. Target content was opened only after the matching prediction seal: **True**. All registered rows were preserved: **True**. The capability-isolation and custody certificates passed. External source identities:

A molecular entity in which there is chelation (and the corresponding chemical species) is called a 'chelate'. The terms bidentate (or didentate), tridentate, tetradentate, ... multidentate are used to indicate the number of potential binding sites of the ligand, at least two of which must be used by the ligand in forming a 'chelate'. For example, the bidentate ethylenediamine forms a chelate with CuI in which both nitrogen atoms of ethylenediamine are bonded to copper. (The use of the term is often restricted to metallic central atoms.) The phrase 'separate binding sites' is intended to exclude cases such as $[\text{PtCl}_3(\text{CH}_2=\text{CH}_2)]^-$, ferrocene and (benzene)tricarbonylchromium in which ethene, the cyclopentadienyl group and benzene, respectively, are considered to present single binding sites to the respective metal atom, and which are not normally thought of as chelates."}; target=sha256:3594b2f1b36bfdb8bfa8b36c5087d7997e1e36e90596c15fc41e15024eec35e0

Meaning. The inorganic extension derives coordination identity and number, denticity, geometry, isomerism, splitting, spin, colour, magnetism, organometallic support, inverse redox transforms, cluster bonding, local solid organization, defects and coupled inorganic reaction networks. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- numerical zero
- negative, irrational, imaginary, floating, signed or continuum proof value
- imported denticity table, chelate taxonomy, coordination-number rule, geometry catalogue or bonding model
- observed IUPAC definition, example or exclusion before prediction seal
- selected term, omitted boundary, fitted topology or target-derived correction

Immutable identities. Source manifest

160. Exact coordination geometry from complete held orientation and adjacency

Claim identity: SFT-CHEM-COORDINATION-GEOMETRY-HELD-ORIENTATION-004

Question and theorem. For one retained central occurrence, coordination geometry is the complete exact signature of every directly attached ligand occurrence, its three-generated-axis held orientation word and every generated boundary adjacency. Count is retained but cannot alone select geometry; space rank three and boundary rank two are forced.

one-retained-centre-and-every-direct-ligand-occurrence__complete-direct-incidence-support__three-generated-axis-held-orientation-word__complete-generated-boundary-adjacency-trace__exact-complete-position-adjacency-signature__forced-generator-three-and-boundary-rank-two__sealed-complete-authority-surfaces-including-adverse-identity-rows__next-position-preserves-prior-and-adds-its-complete-relations

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-CHEM-LIGAND-DENTICITY-CHELATION-TOPOLOGY-003

Generated grammar. Generate the literal product of carrier, incidence, orientation, adjacency, identity, rank, observation and extension forms; decide all 256 forms solely from admitted retained-occurrence, exact incidence, generator-three, boundary-rank-two, graph, information-retention and measured-value-boundary laws.

Boundary: Every positive finite complete coordination entity with one retained centre, every directly attached ligand occurrence, one exact three-axis Fold orientation word per ligand, every generated boundary adjacency, all fifty-three value-free registered authority surfaces, all four preserved adverse identity rows and all reported or absent NIST coordinate surfaces.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *one-retained-centre-and-every-direct-ligand-occurrence__complete-direct-incidence-support__three-generated-axis-held-orientation-word__complete-generated-boundary-adjacency-trace__exact-complete-position-adjacency-signature__forced-generator-three-and-boundary-rank-two__sealed-complete-authority-surfaces-including-adverse-identity-rows__next-position-preserves-prior-and-adds-its-complete-relations*. Closure is *depth_independent*; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	one-retained-centre-and-every-direct-ligand-occurrence	chemical-formula-only	A formula does not retain the central or ligand occurrences.
incidence	complete-direct-in-cidence-support	coordination-number-alone-selects-shape	Equal counts can carry different orientations and adjacency; count alone cannot select geometry.
orientation	three-generated-axis-held-orientation-word	imported-shape-name-or-continuum-coordinate	A conventional name or continuum coordinate imports the result.
adjacency	complete-generated-boundary-adjacency-trace	selected-or-inferred-neighbour-pairs	Selecting neighbours omits part of the boundary relation.
identity	exact-complete-position-adjacency-signature	orientation-or-occurrence-collapse	Collapsing an occurrence or orientation destroys a distinguishable geometry.
rank	forced-generator-three-and-boundary-rank-two	free-dimensional-or-polyhedral-rank	A free rank imports geometric structure.
observation	sealed-complete-authority-surfaces-including-adverse-identity-rows	selected-favourable-geometry-rows	Selected rows cannot test the full source boundary.
extension	next-position-preserved-prior-and-adds-its-complete-relations	new-position-replaces-or-recounts-prior-geometry	Replacement erases the prior geometry.

Adverse controls. All mandatory controls passed:

161. Exact coordination-form equivalence and native isomer distinction classes

Claim identity: SFT-CHEM-COORDINATION-ISOMERISM-EQUIVALENCE-005

Question and theorem. Exact coordination-form equivalence is the exhaustive occurrence-bijection preservation of complete composition, attachment, adjacency and three-axis two-fibre words. The first failed invariant forces attachment, mirror-complement or remaining orientation-adjacency distinction without importing an isomer catalogue.

two-complete-retained-coordination-forms__same-complete-composition-multiset__enumerate-every-occurrence-bijection__complete-attachment-and-adjacency-preservation__complete-three-axis-two-fibre-relation__first-failed-invariant-

forces-native-class__complete-17-surface-sealed-vector-with-linkage-addendum__successor-preserves-prior-signatures-and-adds-relations

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-CHEM-STEREO-ENANTIOMER-001
- SFT-CHEM-STEREO-DIASTEREOMER-001
- SFT-CHEM-COORDINATION-GEOMETRY-HELD-ORIENTATION-004

Generated grammar. Generate the literal product of carrier, composition, bijection, graph, orientation, native-class, observation and successor forms; decide all 256 candidates solely from admitted finite-form, exact-combinatorial, graph, information-retention, stereochemical and INORG-004 geometry dependencies.

Boundary: Every pair of positive finite complete coordination forms with the same complete composition multiset, every occurrence permutation, every retained attachment and adjacency, every three-axis word using only fibre-one, fibre-two or structural EmptyOne, the generated global fibre complement, all seventeen sealed IUPAC surfaces, both preserved Gold Book identity redirects and the explicitly absent literal linkage term.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *two-complete-retained-coordination-forms__same-complete-composition-multiset__enumerate-every-occurrence-bijection__complete-attachment-and-adjacency-preservation__complete-three-axis-two-fibre-relation__first-failed-invariant-forces-native-class__complete-17-surface-sealed-vector-with-linkage-addendum__successor-preserves-prior-signatures-and-adds-relations*. Closure is *depth_independent*; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	two-complete-retained-coordination-forms	names-or-formulae-only	Names do not retain complete forms.
composition	same-complete-composition-multiset	different-compositions-called-isomers	Isomer comparison requires the same complete composition.
bijection	enumerate-every-occurrence-bijection	selected-correspondence-between-occurrences	A selected mapping can manufacture equivalence.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
graph	complete-attachment-and-adjacency-preservation	partial-or-named-connectivity	Partial connectivity omits attachment distinctions.
orientation	complete-three-axis-two-fibre-relation	shape-name-point-group-or-continuum-transform	Imported transformations select the result.
class	first-failed-invariant-forces-native-class	imported-isomer-catalogue	A catalogue does not force the first failed invariant.
observation	complete-17-surface-sealed-vector-with-linkage-addendum	selected-favourable-term	Selected definitions cannot test all classes.
extension	successor-preserve-prior-signatures-and-adds-relations	new-occurrence-reclassifies-prior-subform	Rewriting loses the prior class trace.

- None.

Meaning. The inorganic extension derives coordination identity and number, denticity, geometry, isomerism, splitting, spin, colour, magnetism, organometallic support, inverse redox transforms, cluster bonding, local solid organization, defects and coupled inorganic reaction networks. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- numerical zero; external glyph 0 is only an inscription and native absence is EmptyOne
- negative, irrational, imaginary, floating, signed or continuum proof values
- imported orbital, crystal-field, ligand-field, point-group, geometry or spectrochemical tables
- free field strength, fitted splitting parameter, dimensional wavelength anchor, selected peak, smoothing threshold or target-derived tolerance
- deleted ancillary, adverse, absent, unresolved or boundary evidence

Immutable identities. Source manifest

163. Exact complex spin-state extrema, order and crossover

Claim identity: SFT-CHEM-COMPLEX-SPIN-STATE-ORDER-007

Question and theorem. The forced three-plus-two split support has ten complete six-electron occupancy signatures and unique low- and high-spin extrema. Exact pair-closure plus split-crossing path counts force high-before-low, coincidence and low-before-high under diluted, first-retained and second-retained interaction recurrence.

one-complex-electron-support__forced-three-plus-two-support__complete-pair-single-occupancy-census__least-crossing-then-least-unmatched-extremum__greatest-unmatched-then-least-crossing-extremum__counted-pair-closure-plus-split-crossing-paths__complete-weak-boundary-strong-trichotomy__monotone-dilution-with-no-extra-rule

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-ORDER-LATTICE-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-PHYS-FIELD-INVERSE-SQUARE-001
- SFT-CHEM-ELECTRONIC-STATE-IDENTITY-001
- SFT-CHEM-ELECTRON-COUNT-SPIN-002

- SFT-CHEM-STATE-ENERGY-ORDER-004
- SFT-CHEM-STATE-SYMMETRY-DEGENERACY-005
- SFT-CHEM-COORDINATION-GEOMETRY-HELD-ORIENTATION-004
- SFT-CHEM-LIGAND-STATE-SPLITTING-006

Generated grammar. Generate the literal product of carrier, split, enumeration, low extremum, high extremum, cost, order and extension choices; decide all 256 candidates only from admitted support, occupancy, state-order, INORG-006 split and geometric-dilution dependencies.

Boundary: Every symmetry-distinct pair/single occupancy of six electron occurrences across the forced three-plus-two support; the two complete extrema; every structural EmptyOne or positive interaction recurrence; all three frozen INORG-007 external source identities and their favorable, conventional and transport-mismatch surfaces.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *one-complex-electron-support__forced-three-plus-two-support__complete-pair-single-occupancy-census__least-crossing-then-least-unmatched-extremum__greatest-unmatched-then-least-crossing-extremum__counted-pair-closure-plus-split-crossing-paths__complete-weak-boundary-strong-trichotomy__monotone-dilution-with-no-extra-rule*. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	one-complex-electron-support	cross-complex-state-mixture	States from different carriers do not share one exact order.
split	forced-three-plus-two-support	imported-orbital-or-field-table	A conventional table would select the state grammar.
enumeration	complete-pair-single-occupancy-censuses	selected-configurations	Selected configurations cannot establish an extremum.
low	least-crossing-the-n-least-unmatched-extremum	named-low-spin-assumption	A name does not force an occupancy.
high	greatest-unmatched-then-least-crossing-extremum	named-high-spin-assumption	A name does not force an occupancy.
cost	counted-pair-closure-plus-split-crossing-paths	fitted-pairing-or-field-energy	A fitted energy imports a free parameter and target choice.
order	complete-weak-boundary-strong-trichotomy	asserted-ground-state-label	An asserted label does not compare both generated extrema.
extension	monotone-dilution-with-no-extra-rule	species-temperature-or-distance-fit	A species fit can manufacture a crossover.

Adverse controls. All mandatory controls passed:

- SFT-CHEM-COORDINATION-GEOMETRY-HELD-ORIENTATION-004
- SFT-CHEM-LIGAND-STATE-SPLITTING-006
- SFT-CHEM-COMPLEX-SPIN-STATE-ORDER-007

Generated grammar. Generate the literal product of carrier, endpoints, state, direction, gap, absorption, colour and extension choices; decide all 256 candidates only from admitted distinction, order, transition, selection-rule and INORG-004/006/007 dependencies.

Boundary: Every ordered ligand/metal carrier pair in one retained coordination entity; every positive exact state successor; every positive proper absorbed subset of a finite complete incident observation support; four frozen definitions and four immutable complete NIST spectra with original custody classes preserved.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *one-retained-coordination-entity__complete-ligand-metal-carrier-pair__two-retained-state-identities__held-source-target-direction__positive-state-order-separation__proper-absorbed-distinction-class__retained-complement-observation-class__complete-spectra-with-no-extra-rule*. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	one-retained-coordination-entity	anonymous-complex-transition	An anonymous transition erases which retained complex carries it.
endpoints	complete-ligand-metal-carrier-pair	imported-orbital-symbol-pair	Conventional orbital names would select the endpoint grammar.
state	two-retained-state-identities	energy-only-endpoints	Energy-only endpoints lose electronic-state identity.
direction	held-source-target-direction	signed-charge-displacement	A signed scalar imports negative quantity and erases endpoint direction.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
gap	positive-state-order-separation	floating-or-dimensional-energy-gap	A dimensional or floating gap imports an unforced scale.
absorption	proper-absorbed-distinction-class	selected-colour-name	A named colour cannot establish what distinction was absorbed.
colour	retained-complement-observation-classes	conventional-colour-wheel	A colour wheel imports a continuum convention into forcing.
extension	complete-spectra-with-no-extra-rule	species-peak-or-threshold-exception	A selected peak or smoothing threshold can manufacture agreement.

Adverse controls. All mandatory controls passed:

- SFT-CHEM-COORDINATION-ENTITY-RETAINED-IDENTITY-001
- SFT-CHEM-LIGAND-STATE-SPLITTING-006
- SFT-CHEM-COMPLEX-SPIN-STATE-ORDER-007

Generated grammar. Generate the literal product of carrier, support, balance, moment, width, direction, classification and extension choices; decide all 256 candidates solely from admitted exact spin, exclusion, occupancy, magnetic-response and INORG-006/007 dependencies.

Boundary: Every finite complete unpaired electron occurrence support on one retained coordination entity; structural EmptyOne or positive cardinality; both held field relations; all three frozen IUPAC definitions and all 174 shared sealed NIST magnetic-response cells.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `one-retained-complex-carrier__complete-unpaired-occurrence-support__pairwise-closure-to-EmptyOne__exact-unpaired-support-count__unpaired-successor-spin-width__held-drawn-or-repelled-field-relation__EmptyOne-diamagnetic-positive-paramagnetic__unpaired-successor-with-no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	one-retained-complex-carrier	free-magnetic-number	A free magnetic number is detached from the inorganic state.
support	complete-unpaired-occurrence-support	selected-or-averaged-spin	A selected or averaged spin loses electron occurrences.
balance	pairwise-closure-to-EmptyOne	numerical-zero-paired-state	Numerical zero is not a native state or proof magnitude.
moment	exact-unpaired-support-count	square-root-spin-only-formula	A square-root formula imports irrational continuum magnitude.
width	unpaired-successor-spin-width	asserted-multiplicity	An asserted multiplicity can contradict complete support.
direction	held-drawn-or-repelled-field-relation	signed-susceptibility-proof	A signed scalar imports negative proof quantity.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
classification	EmptyOne-diamagnetic-positive-paramagnetic	species-magnetic-lookup	A species lookup lets observed class select the rule.
extension	unpaired-successor-with-no-extra-rule	fitted-g-factor-or-complex-exception	A fitted factor or species exception destroys zero-parameter closure.

Adverse controls. All mandatory controls passed:

166. Exact direct metal-carbon organometallic bond law

Claim identity: SFT-CHEM-ORGANOMETALLIC-METAL-CARBON-BOND-010

Question and theorem. Positive complete direct admitted-centre/carbon incidence support with held bond electrons uniquely forces organometallic bond topology and its exact cardinality; absent direct support remains structural EmptyOne.

one-retained-chemical-entity__retained-admitted-centre-occurrence__retained-carbon-occurrence__direct-centre-carbon-incidence__complete-held-bond-electron-support__complete-positive-direct-incidence-support__positive-support-or-organometallic-EmptyOne-otherwise__direct-incidence-successor-no-extra-rule

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001

- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-INFO-SYMBOL-DISTINCTION-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-CHEM-MEAS-CHEMICAL-ENTITY-001
- SFT-CHEM-ELEM-ELEMENT-001
- SFT-CHEM-BOND-CHEMICAL-BOND-001
- SFT-CHEM-BOND-COVALENT-001
- SFT-CHEM-BOND-ORDER-001
- SFT-CHEM-STOICH-COMPOSITION-001

- SFT-CHEM-ORBITAL-SUPPORT-OCCUPANCY-003
- SFT-CHEM-COORDINATION-ENTITY-RETAINED-IDENTITY-001
- SFT-CHEM-COORDINATION-GEOMETRY-HELD-ORIENTATION-004

Generated grammar. Generate the literal product of carrier, centre, carbon, topology, electron, multiplicity, classification and extension choices; decide all 256 candidates solely from admitted chemical-entity, element, bond, composition, electron-support and coordination dependencies.

Boundary: Every finite one-entity support of distinct direct admitted-centre/carbon incidences with positive held electron support; structural EmptyOne absence; all twelve frozen IUPAC criterion, scope, example, context and exclusion surfaces.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `one-retained-chemical-entity__retained-admitted-centre-occurrence__retained-carbon-occurrence__direct-centre-carbon-incidence__complete-held-bond-electron-support__complete-positive-direct-incidence-support__positive-support-organometallic-EmptyOne-otherwise__direct-incidence-success-or-no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	one-retained-chemical-entity	free-compound-name	A name does not retain the bonded entity.
centre	retained-admitted-centre-occurrence	imported-conventional-metal-list	A conventional list imports the classification boundary.
carbon	retained-carbon-occurrence	selected-formula-fragment	A selected formula fragment need not be a bonded carbon occurrence.
topology	direct-centre-carbon-incidence	proximity-or-name-association	Proximity or naming does not force a bond.
electrons	complete-held-bond-electron-support	assumed-valence-number	An assumed valence number loses the bond support.
multiplicity	complete-positive-direct-incidence-support	single-selected-bond	Selecting one bond loses additional incidences.
classification	positive-support-organometallic-EmptyOne-otherwise	species-or-name-lookup	A lookup lets the observed label choose the law.
extension	direct-incidence-successor-no-extra-rule	fitted-species-exception	A species exception destroys zero-parameter closure.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

169. Exact insertion, migratory-insertion and elimination adjacency-trace law

Claim identity: SFT-CHEM-INSERTION-ELIMINATION-PATHWAY-013

Question and theorem. Insertion, exact extrusion, migratory insertion and elimination are complete carrier-preserving before/after adjacency traces with exact removed/added support.

complete-retained-carrier-support__complete-before-after-adjacency-difference__xz-plus-y-to-x-y-z-adjacency-law__migration-plus-insertion-composition__extrusion-exact-insertion-inverse__complete-two-eliminand-centre-trace__held-unsaturation-ring-or-carbene-boundary__adjacency-trace-composition-no-extra-rule

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-MEASURED-VALUE-BOUNDARY-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-INFO-CONSERVATION-LOSS-001

- SFT-COMP-FORM-STATE-TRANSITION-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-BOND-CHEMICAL-BOND-001
- SFT-CHEM-RXN-IDENTITY-001
- SFT-CHEM-RXN-MECHANISM-001
- SFT-CHEM-ORGANOMETALLIC-METAL-CARBON-BOND-010
- SFT-CHEM-OXIDATIVE-ADDITION-REDUCTIVE-ELIMINATION-012

Generated grammar. Generate the literal product of carrier, trace, insertion, migration, reverse, elimination, product and extension choices; decide all 256 candidates only from admitted graph, transition, conservation, mechanism and INORG-010/012 dependencies.

Boundary: Every finite complete adjacency transformation for insertion, exact extrusion, migratory insertion and distinct- or single-centre elimination; all ten frozen IUPAC definition, composition, scope, absent-example and product-boundary surfaces.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-retained-carrier-support__complete-before-after-adjacency-difference__xz-plus-y-to-x-y-z-adjacency-law__migration-plus-insertion-composition__extrusion-exact-insertion-inverse__complete-two-eliminand-centre-trace__held-unsaturation-ring-or-carbene-boundary__adjacency-trace-composition-no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-retained-carrier-support	anonymous-products	Anonymous products lose occurrence identity.
trace	complete-before-after-adjacency-difference	endpoint-only-reaction	Endpoints alone do not certify the transformation.
insertion	xz-plus-y-to-x-y-z-adjacency-law	imported-product-formula	A product formula can hide adjacency.
migration	migration-plus-insertion-composition	named-migratory-step	A name does not force composition.
reverse	extrusion-exact-insertion-inverse	insertion-elimination-conflation	Conflating reverse classes loses the exact boundary.
elimination	complete-two-eliminand-centre-trace	selected-leaving-group	Selection loses one eliminand or centre.
product	held-unsaturation-ring-or-carbene-boundary	imported-unsaturation-name	A conventional name is not a generated adjacency.
extension	adjacency-trace-composition-no-extra-rule	mechanism-specific-exception	An exception destroys closure.

Adverse controls. All mandatory controls passed:

- `false_premise`: passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt `sha256:8f6271ac7a4981344298f6c4f45e6a81f596ce88254956b9340f4afd7f77d5b2`.

- SFT-CHEM-COORDINATION-GEOMETRY-HELD-ORIENTATION-004
- SFT-CHEM-ORGANOMETALLIC-METAL-CARBON-BOND-010

Generated grammar. Generate the literal product of carrier, centres, connectivity, direct, bridge, grouping, count and extension alternatives; decide all 256 forms from admitted graph, bond, composition and coordination dependencies.

Boundary: Every finite connected graph of at least two metal centres with direct, bridging or held grouping relations and explicit bridge occurrences; all ten frozen cluster and iron-sulfur-cluster topology, example and charge-inscription surfaces.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *one-retained-cluster-entity__complete-finite-multicentre-support__complete-connected-cluster-relation-graph__explicit-direct-metal-bond-subgraph__complete-bridging-ligand-path-support__held-grouping-relation-without-bond-necessity__positive-count-or-EmptyOne-per-relation-class__connected-centre-successor-no-extra-rule*. Closure is *depth_independent*; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	one-retained-cluster-entity	free-cluster-name	A name loses centre support.
centres	complete-finite-multicentre-support	selected-metal-pair	A selected pair loses remaining centres.
connectivity	complete-connected-cluster-relation-graph	proximity-only-list	A list does not prove connected support.
direct	explicit-direct-metal-bond-subgraph	assumed-metal-metal-bond	Assumption confuses grouping with bonding.
bridge	complete-bridging-ligand-path-support	implicit-ligand-bridge	An implicit bridge loses ligand occurrences.
grouping	held-grouping-relation-without-bond-necessity	bond-required-cluster-definition	Requiring a bond rejects lawful held grouping.
counts	positive-count-or-EmptyOne-per-relation-class	numerical-zero-missing-mode	Numerical zero is not structural absence.
extension	connected-centre-successor-no-extra-rule	catalogue-specific-exception	A catalogue destroys closure.

- SFT-CHEM-COORDINATION-ENTITY-RETAINED-IDENTITY-001
- SFT-CHEM-COORDINATION-GEOMETRY-HELD-ORIENTATION-004
- SFT-CHEM-METAL-CLUSTER-BONDING-014

Generated grammar. Generate the literal product of carrier, composition, formula, bonds, network, constituent, ownership and extension alternatives; decide all 256 forms from the admitted exact-arithmetic, graph, generator-three, stoichiometry, bond, coordination and cluster dependencies.

Boundary: Every positive finite complete local occurrence motif with exact local adjacency, primitive positive formula, generated repeat rank one, two or three, and explicit Chemistry-to-Materials handoff; all ten frozen coordination-network and returned mixed-crystal surfaces.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `one-finite-local-chemical-motif__complete-species-occurrence-multiset__exact-primitive-positive-count-ratio__complete-local-bond-adjacency-support__generated-repeat-axis-rank-one-two-or-three__positive-second-constituent-support-or-EmptyOne__chemistry-local-materials-bulk-handoff__local-occurrence-successor-no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	one-finite-local-chemical-motif	bulk-material-response	Bulk response is outside Chemistry ownership.
composition	complete-species-occurrence-multiset	nominal-formula-label	A label can omit occurrences.
formula	exact-primitive-positive-count-ratio	unreduced-or-fitted-stoichiometry	Unreduced or fitted coefficients are not unique.
bonds	complete-local-bond-adjacency-support	averaged-coordination-number	An average loses local adjacency.
network	generated-repeat-axis-rank-one-two-or-three	continuum-infinite-lattice	A continuum lattice imports infinity.
constituent	positive-second-constituent-support-or-EmptyOne	real-valued-solid-solution-fraction	A real fraction imports continuum fitting.
ownership	chemistry-local-materials-bulk-handoff	chemistry-claims-bulk-response	Bulk response belongs to Materials.
extension	local-occurrence-successor-no-extra-rule	crystal-family-exception	A catalogue exception destroys closure.

Adverse controls. All mandatory controls passed:

172. Exact defect chemistry and non-stoichiometry law

Claim identity: SFT-CHEM-DEFECT-NONSTOICHIOMETRY-016

Question and theorem. A defect is an exact reference/observed local-motif interruption; vacancies are EmptyOne occupancies and non-stoichiometry is separate positive missing and added support.

finite-complete-reference-and-observed-motif__complete-reference-site-and-species-support__reference-site-with-structural-EmptyOne__separate-positive-missing-and-added-supports__complete-vacancy-substitution-interstitial-classes__exact-reference-observed-primitive-formulas__reference-membership-forces-origin-class__site-occurrence-successor-no-extra-rule

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-INFO-CONSERVATION-LOSS-001
- SFT-CHEM-STOICH-COMPOSITION-001
- SFT-CHEM-STOICH-CONSERVATION-001
- SFT-CHEM-MEAS-FORMULA-001
- SFT-CHEM-SOLID-STATE-LOCAL-COORDINATION-015

Generated grammar. Generate the literal product of carrier, reference, vacancy, difference, class, composition, origin and extension alternatives; decide all 256 forms from admitted exact arithmetic, discrete support, stoichiometry and local-solid coordination.

Boundary: Every finite complete reference-site and observed local motif with explicit vacancy, substitution and interstitial supports, exact positive reconciliation and primitive formulas; all fifteen frozen solid-solution, lattice-defect, noncrystal-scope, extrinsic and intrinsic-defect surfaces including two definition-note surfaces.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `finite-complete-reference-and-observed-motif__complete-reference-site-and-species-support__reference-site-with-structural-EmptyOne__separate-positive-missing-and-added-supports__complete-vacancy-substitution-interstitial-classes__exact-reference-observed-primitive-formulas__reference-membership-forces-origin-class__site-occurrence-successor-no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	finite-complete-reference-and-observed-motif	continuum-defect-density	A continuum density loses the exact local defect occurrences.
reference	complete-reference-site-and-species-support	nominal-formula-only	A nominal formula does not identify the occupied sites.
vacancy	reference-site-with-structural-EmptyOne	numerical-zero-occupancy	Numerical zero is not a Fold form.
difference	separate-positive-missing-and-added-supports	signed-stoichiometric-subtraction	Signed subtraction imports negative values.
class	complete-vacancy-substitution-interstitial-classes	selected-defect-name	A selected name omits alternative interruptions.
composition	exact-reference-observed-primitive-formulas	fitted-nonstoichiometric-variable	A fitted variable is neither exact nor unique.
origin	reference-membership-forces-origin-class	assumed-intrinsic-or-extrinsic-label	An assumed label does not follow from composition.
extension	site-occurrence-successor-no-extra-rule	catalogue-specific-defect-exception	A catalogue exception destroys closure.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt

23. Organic structure, stereochemistry and reaction mechanisms - 16 admitted claims

Conjugation, aromatic recurrence, conformers and every registered reaction family are completely enumerated. This entire registered subcategory is included; no proper subset is presented as field completion.

174. Exact connected alternating conjugated-support law

Claim identity: SFT-CHEM-CONJUGATED-SUPPORT-001

Question and theorem. A conjugated Fold support is one finite connected molecular subcarrier in which every adjacent incidence retains one of the two forced Fold fibres, every successive incidence carries the opposed fibre through a shared atom occurrence, and every atom and incidence is retained. A fresh occurrence has one unique opposed-fibre successor.

one-retained-molecular-subcarrier__complete-connected-adjacency-path__two-forced-held-support-fibres__exact-opposed-adjacent-fibre-recurrence__complete-atom-and-incidence-support__shared-centre-support-propagation__structure-sealed-before-external-observation__opposed-fibre-successor-no-extra-rule

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001

- SFT-CHEM-STOICH-COMPOSITION-001
- SFT-CHEM-ORGANIC-FUNCTIONAL-GROUP-001
- SFT-CHEM-ORGANIC-REACTION-FAMILY-001

Generated grammar. Generate the literal product of carrier, connectivity, fibres, alternation, coverage, propagation, observation and extension alternatives; decide all 256 forms from admitted form enforcement, exact graph, distinction, conservation, molecular, bond-order and organic-carrier dependencies.

Boundary: Every finite complete molecular path of at least three distinct atom occurrences and its complete adjacent incidence support; all ten frozen terminology, experimental structure, separated-support control, vibrational and UV-visible surfaces.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *one-retained-molecular-subcarrier__complete-connected-adjacency-path__two-forced-held-support-fibres__exact-opposed-adjacent-fibre-recurrence__complete-atom-and-incidence-support__shared-centre-support-propagation__structure-sealed-before-external-observation__opposed-fibre-successor-no-extra-rule*. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	one-retained-molecular-subcarrier	selected-unbound-bond-marks	Selected marks do not define one molecular subcarrier.
connectivity	complete-connected-adjacency-path	disconnected-support-fragments	Disconnected fragments cannot propagate one support distinction.
fibres	two-forced-held-support-fibres	bond-support-label-erased	Erasure merges the two required support distinctions.
alternation	exact-opposed-adjacent-fibre-recurrence	arbitrary-adjacent-fibre-repetition	Repeated adjacent fibres close the alternating path.
coverage	complete-atom-and-incidence-support	favourable-subpath-only	A selected subpath can hide a failing incidence.
propagation	shared-centre-support-propagation	independent-bond-pairs	Independent pairs do not share a propagation centre.
observation	structure-sealed-before-external-observation	spectrum-or-name-selects-structure	An external name or spectrum cannot select the Fold law.
extension	opposed-fibre-successor-no-extra-rule	named-conjugation-exception	A named exception introduces an unforced rule.

Adverse controls. All mandatory controls passed:

175. Exact one-carrier multiple-representation equivalence law

Claim identity: SFT-CHEM-RESONANCE-EQUIVALENT-REPRESENTATION-002

Question and theorem. A Fold representation-equivalence class retains exactly one molecular carrier, every atom occurrence and every adjacency while retaining at least two distinct encoding identities. In the minimal generated pair, every support incidence in the second encoding is the exact opposed Fold-fibre complement of the first; this relation creates neither a second species nor an equilibrium process.

one-retained-molecular-carrier__complete-equal-atom-occurrence-support__complete-equal-adjacency-support__multiple-distinct-encoding-identities__complete-opposed-fibre-complement__one-carrier-many-representations__representation-relation-only__shared-complement-successor-no-extra-rule

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-MATH-DISCRETE-001
- SFT-MATH-COMBINATORICS-001
- SFT-MATH-GRAPH-NETWORK-001
- SFT-INFO-SYMBOL-DISTINCTION-001

- SFT-CHEM-MOL-ISOMER-001
- SFT-CHEM-BOND-ORDER-001
- SFT-CHEM-ELECTRONIC-STATE-IDENTITY-001
- SFT-CHEM-CONJUGATED-SUPPORT-001

Generated grammar. Generate the literal product of carrier, atom-support, adjacency, encoding-number, fibre-relation, identity, process and extension alternatives; decide all 256 forms from admitted form enforcement, exact graph, distinction, conservation, molecular identity, bond-order, electronic-state and conjugated-support dependencies.

Boundary: Every finite complete connected alternating molecular representation pair related by global Fold-fibre complement. Larger finite representation classes are generated by composition of exact local pair relations while retaining the same carrier, atoms and adjacency. The empirical boundary is the four complete preregistered IUPAC records.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: *one-retained-molecular-carrier__complete-equal-atom-occurrence-support__complete-equal-adjacency-support__multiple-distinct-encoding-identities__complete-opposed-fibre-complement__one-carrier-many-representations__representation-relation-only__shared-complement-successor-no-extra-rule*. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	one-retained-molecular-carrier	different-molecular-carriers	Different carriers are different molecular identities.
atoms	complete-equal-atom-occurrence-support	atom-occurrence-change	Adding, deleting or replacing an occurrence changes the carrier description.
adjacency	complete-equal-adjacency-support	connectivity-change	Changed adjacency is a distinct constitution, not an encoding alternative.
encodings	multiple-distinct-encoding-identities	one-encoding-only	One inscription supplies no representation equivalence class.
fibres	complete-opposed-fibre-complement	partial-or-arbitrary-label-change	An arbitrary partial change does not preserve the generated Fold relation.
identity	one-carrier-many-representations	representations-counted-as-species	Formal encodings do not create new chemical carriers.
process	representation-relation-only	equilibrium-or-transition-imported	A representation relation does not imply a physical interconversion process.
extension	shared-complement-successor-no-extra-rule	named-resonance-exception	A named exception adds an unforced classification rule.

Adverse controls. All mandatory controls passed:

176. Exact aromatic recurrence, support sequence and positive stability law

Claim identity: SFT-CHEM-AROMATIC-RECURRENCE-STABILITY-003

Question and theorem. An aromatic Fold carrier is one complete generated molecular cycle retaining both Fold boundary fibres and at least one complete layer of their four ordered pair cells. The primitive support count is six; every lawful successor adds the same four-cell layer, forcing ten, fourteen and every later positive successor. Opening the complete recurrence requires one retained positive transfer, so the closed recurrence precedes its opened localized reference without an imported electron-count or measured-energy rule.

one-complete-molecular-carrier__complete-generated-cycle__complete-two-fibre-boundary__complete-four-ordered-pair-cell-layer__explicit-complete-first-return-trace__positive-recurrence-opening-gap__value-free-seal-and-complete-blind-vector__complete-four-cell-successor-no-extra-rule

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-FOLD-001
- SFT-FOUNDATION-FOLD-ASSEMBLY-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-COMBINATORICS-001

- SFT-CHEM-STATE-ENERGY-ORDER-004
- SFT-CHEM-MOLECULAR-FORMATION-ENERGY-013
- SFT-CHEM-CONJUGATED-SUPPORT-001
- SFT-CHEM-RESONANCE-EQUIVALENT-REPRESENTATION-002

Generated grammar. Generate the literal product of carrier, cycle, Fold boundary, pair-cell layer, return trace, stability order, observation custody and extension alternatives; decide all 256 forms solely from admitted Fold assembly, exact graph, finite dynamics, generator three, multicentre support, energy order, formation-energy accounting, conjugation and representation-equivalence dependencies.

Boundary: Every positive finite complete molecular cycle; both Fold boundary fibres; every positive number of complete four-ordered-pair-cell layers; explicit first-return traces; and the complete nine-target authority surface containing six development-observed correspondence records and three separately outcome-unopened blind NIST CCCBDB experimental-data pages.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: one-complete-molecular-carrier__complete-generated-cycle__complete-two-fibre-boundary__complete-four-ordered-pair-cell-layer__explicit-complete-first-return-trace__positive-recurrence-opening-gap__value-free-seal-and-complete-blind-vector__complete-four-cell-successor-no-extra-rule. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	one-complete-molecular-carrier	aromatic-name-or-answer-only	A name does not retain the molecular support that is claimed to recur.
cycle	complete-generated-cycle	open-path-or-selected-ring	An open path or selected example does not establish cyclic first return.
boundary	complete-two-fibre-boundary	one-fibre-or-duplicated-boundary	An incomplete or duplicated boundary erases one forced Fold distinction.
layer	complete-four-ordered-pair-cell-layer	selected-transition-cell-subset	A selected subset can be tuned to a familiar count and is not closed under pair-cell perturbation.
return	explicit-complete-first-return-trace	period-label-without-trace	A named cycle length cannot prove return or preserve its path.
stability	positive-recurrence-opening-gap	measured-energy-or-name-selected-order	A measured energy or conventional aromatic label cannot select the structural order.
observation	value-free-seal-and-complete-blind-vector	selected-or-preopened-value-row	A selected or preopened value vector can feed the desired order back into the law.
extension	complete-four-cell-successor-no-extra-rule	imported-electron-count-or-species-rule	An imported count formula or species exception is an added selector.

177. Exact aromatic, antiaromatic and nonaromatic distinction law

Claim identity: SFT-CHEM-ANTIAROMATIC-NONAROMATIC-DISTINCTION-004

Question and theorem. For one retained molecular cycle, the generated Fold recurrence has exactly three structural classes: complete planar closure, a planar complete support with frustrated return, or a structurally broken plane/conjugation with EmptyOne recurrence. Their primitive supports are six, four and EmptyOne respectively; the complete classes append all four ordered pair cells at each successor, and two positive distinction transfers force the closed, broken, frustrated stability order without an imported electron-count or measured-energy rule.

one-retained-same-cycle-carrier__complete-three-class-census__held-planar-or-broken-geometry__held-complete-or-broken-conjugation__closed-frustrated-or-EmptyOne-return__positive-two-step-stability-order__value-free-complete-comparative-seal__complete-four-cell-successors-no-extra-rule

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-FOLD-001
- SFT-MATH-EXACT-ARITHMETIC-001
- SFT-MATH-COMBINATORICS-001

- SFT-CHEM-STATE-ENERGY-ORDER-004
- SFT-CHEM-CONJUGATED-SUPPORT-001
- SFT-CHEM-AROMATIC-RECURRENCE-STABILITY-003

Generated grammar. Generate the literal product of carrier, class census, geometry, support, recurrence boundary, stability order, observation custody and extension alternatives; decide all 256 forms solely from the admitted Fold assembly, exact arithmetic, graph, order, dynamics, multicentre support, state-energy, conjugation and aromatic-recurrence dependencies.

Boundary: Every positive finite complete molecular cycle on one retained carrier; both held geometry states; both held conjugation states; complete two-fibre closure, complete four-cell frustrated return and structural EmptyOne after an explicit break; all three same-cycle classes; every positive complete four-cell successor; and the complete five-target authority surface.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: one-retained-same-cycle-carrier__complete-three-class-census__held-planar-or-broken-geometry__held-complete-or-broken-conjugation__closed-frustrated-or-EmptyOne-return__positive-two-step-stability-order__value-free-complete-comparative-seal__complete-four-cell-successors-no-extra-rule. Closure is depth_independent; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	one-retained-same-cycle-carrier	different-or-name-only-carriers	Different carriers cannot establish alternatives of the same cycle.
census	complete-three-class-census	selected-favourable-category	Selecting a familiar label omits lawful same-cycle alternatives.
geometry	held-planar-or-broken-geometry	planarity-assumed-or-erased	Erasing geometry merges a frustrated planar recurrence with a recurrence avoided by an out-of-plane break.
support	held-complete-or-broken-conjugation	conjugation-name-only	A name does not distinguish complete support from a broken recurrence path.
boundary	closed-frustrated-or-EmptyOne-return	electron-count-label-imported	An imported count label does not derive return, frustration or structural absence.
order	positive-two-step-stability-order	measured-energy-selected-order	Measured values cannot choose which structural alternative is stable.
observation	value-free-complete-comparative-seal	selected-or-preopened-comparison	A selected outcome can conceal an adverse same-cycle alternative.
extension	complete-four-cell-successors-no-extra-rule	named-ring-or-extra-count-rule	A species exception or imported count recurrence adds a free selector.

Adverse controls. All mandatory controls passed:

Custody certificate: sha256:05d85ad88760978a9609e820a08e409f4914d0fac30e942f47b5ecd56d4fa186.

Registered source descriptions:

- None.

Registered target identities:

- None.

Meaning. The organic extension derives conjugation, resonance, aromatic recurrence and its measured stability excess, antiaromatic/nonaromatic distinction, conformer classes and populations, substitution, addition, elimination and composition-retaining rearrangement with complete adverse evidence. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no numerical zero; structural absence is EmptyOne
- no negative irrational imaginary continuum fitted free or imported native parameter
- no Hückel $4n+2$ or $4n$ premise electron-count lookup molecular-name selector or measured energy in survivor selection
- no omission of the aromatic antiaromatic or nonaromatic same-cycle alternative
- no relabelling a broken plane or conjugation as complete frustrated recurrence
- three inspected records remain development-observed correspondence and are not called blind
- two NIST CCCBDB outcomes remain inaccessible until after the law and value-free prediction seal
- external signed decimal zero and absent inscriptions remain downstream records and never native proof arithmetic

178. Exact finite conformer generation and equivalence law

Claim identity: SFT-CHEM-CONFORMER-GENERATION-EQUIVALENCE-005

Question and theorem. For any positive finite connected molecular graph with a complete ordered rotor census and finite held torsion alphabets, every conformer assignment is generated exactly once by the Cartesian state product. Exact equivalence is the orbit relation of every exhaustively generated atom-type and bond-preserving graph automorphism; the disjoint orbit quotient is the complete conformer census, without coordinate tolerance, measured-energy selection or species rule.

complete-finite-molecular-graph__complete-ordered-rotor-census__complete-cartesian-state-generation__exhaustive-graph-automorphism-action__exact-automorphism-orbit-equivalence__complete-disjoint-orbit-quotient__value-free-operational-census-seal__finite-product-successor-no-extra-rule

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

- SFT-FOUNDATION-FORM-ENFORCEMENT-001
- SFT-FOUNDATION-FOLD-001
- SFT-MATH-EXACT-ARITHMETIC-001

- SFT-CHEM-CONFIGURATION-ORDER-PATH-011
- SFT-CHEM-DIHEDRAL-TORSIONAL-STATE-004

Generated grammar. Generate the literal product of carrier, rotor, state generation, symmetry, equivalence, quotient, observation and extension alternatives; decide all 256 forms solely from admitted exact finite graph, combinatoric, order, process, molecular, isomeric and torsional-state dependencies.

Boundary: Every positive finite connected atom-labelled graph; every complete ordered four-site rotor; each positive finite held state alphabet with exact reversal involution; all Cartesian assignments; every atom-type and bond-preserving position bijection; all induced rotor actions; the complete disjoint orbit quotient; and the four frozen development-observed authority records.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-finite-molecular-graph__complete-ordered-rotor-census__complete-cartesian-state-generation__exhaustive-graph-automorphism-action__exact-automorphism-orbit-equivalence__complete-disjoint-orbit-quotient__value-free-operational-census-seal__finite-product-successor-no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-finite-molecular-graph	name-or-coordinate-list	A name or selected coordinates omit molecular identity and adjacency.
rotor	complete-ordered-rotor-census	selected-single-angle	One selected angle omits other rotors and held states.
generation	complete-cartesian-state-generation	energy-picked-conformer	Measured energy cannot choose which assignments are generated.
symmetry	exhaustive-graph-automorphism-action	named-symmetry-assumption	A named symmetry can omit or add an equivalence action.
equivalence	exact-automorphism-orbit-equivalence	coordinate-tolerance-clustering	A tolerance or continuum metric introduces a fitted boundary.
quotient	complete-disjoint-orbit-quotient	selected-representative-list	A selected list can duplicate or omit lawful conformers.
observation	value-free-operational-census-seal	source-readable-generator	External conformer names or energies could select the quotient.
extension	finite-product-successor-no-extra-rule	species-exception-or-extra-rule	A species exception cannot establish a general finite algorithm.

Adverse controls. All mandatory controls passed:

Falsification boundary: The claim fails if any ORG-005 conformer class, observation, condition, timescale or source response is omitted; if a probability is fitted, randomized, imported or detached from its exact positive finite boundary; if native numerical zero or signed energy subtraction is used; if the 256-form census has other than one survivor; if the blind 298.5 K population vector, 22-spectrum condition surface, printed energy vector, all 224 ACS measurement rows, failed provider routes or the isotropic 201/200 rounded-display adverse row is erased or altered.

Measurement receipt: sha256:3db3549bf6bd34d53d6973f63a5463283badb8b3bb47a085c390917865414ea7.
 Isolation certificate: sha256:f0c9bdf42921f15d2d9741919bc0030b82bef7d468ff1e5556583e456b12f00c.
 Custody certificate: sha256:e0293fd8a351e782c7942da0f764079817474e6956bb7df33b050350589eae8f.

Registered source descriptions:

- None.

Registered target identities:

- None.

Meaning. The organic extension derives conjugation, resonance, aromatic recurrence and its measured stability excess, antiaromatic/nonaromatic distinction, conformer classes and populations, substitution, addition, elimination and composition-retaining rearrangement with complete adverse evidence. This particular result is closed only at its exact registered grammar and evidence boundary.

Explicit exclusions.

- no native numerical zero; structural absence and the least-state reference are EmptyOne
- no negative irrational imaginary continuum fitted free random or imported native parameter
- no Boltzmann exponential measured temperature species label energy or population used to generate the law
- all external signed zero negative decimal uncertainty and rounded inscriptions remain downstream evidence
- no condition observation-timescale source response failed capture adverse row or rounding discrepancy omitted
- no external result opened before its applicable value-free source and prediction seal

Immutable identities. Source manifest

180. Exact entering/leaving carrier substitution family law

Claim identity: SFT-CHEM-NUCLEOPHILIC-SUBSTITUTION-FAMILY-007

Question and theorem. For every complete finite registered exchange carrier, one incoming held pair forms the unique centre-entering bond while the two occurrences of the displaced centre-leaving bond remain held on the leaving carrier. Every atom and electron occurrence is conserved. The complete generated path family consists of a one-transition exchange and cleavage followed by formation; formation before cleavage violates the unique exchange slot.

*complete-source-ordered-reaction-carrier__complete-source-bonds-and-free-entering-pair__every-held-pair-occurrenc
 e-conserved__one-bond-cleaved-and-one-bond-formed__complete-one-transition-and-cleavage-first-path-family__ever
 y-state-edge-status-and-source-record-retained__value-free-structure-and-mechanism-target-seal__fresh-retained-subs
 trate-successor-no-extra-rule*

Rooted dependency chain. The registration names the single premise-free root theorem and accepts only these already admitted dependencies:

Generated grammar. Generate the literal product of carrier, source, support, change, path, record, observation and extension alternatives; decide all 256 forms only from admitted exact graph, conservation, bond and transition laws.

Boundary: Every positive finite complete exchange carrier with distinct centre, retained, entering and leaving occurrences; all source bonds and free pairs; every atom and held electron occurrence; the single exchange slot; both generated path orders; every source record and the complete nine-target external surface.

The engine regenerated 256 candidates and 256 one-for-one decisions. Exactly one survived: `complete-source-ordered-reaction-carrier__complete-source-bonds-and-free-entering-pair__every-held-pair-occurrence-conserved__one-bond-cleaved-and-one-bond-formed__complete-one-transition-and-cleavage-first-path-family__every-state-edge-status-and-source-record-retained__value-free-structure-and-mechanism-target-seal__fresh-retained-substrate-successor-no-extra-rule`. Closure is `depth_independent`; minimality and named-shape uniqueness are recorded in the closure certificate.

Coordinate-by-coordinate uniqueness. Each row compares the survivor with every otherwise-surviving alternative on that coordinate.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
carrier	complete-source-ordered-reaction-carrier	selected-product-label-or-disconnected-fragments	A named answer cannot reconstruct one complete reaction carrier.
source	complete-source-bonds-and-free-entering-pair	reactant-or-bond-support-omitted	Omission prevents exact reconstruction of what changes.
support	every-held-pair-occurrence-conserved	electrons-created-destroyed-or-collapsed-to-charge-number	A scalar charge or incomplete pair loses the transferred occurrences.
change	one-bond-cleaved-and-one-bond-formed	endpoint-only-product-or-extra-bond-change	An endpoint or extra edit does not prove the minimal substitution map.
path	complete-one-transition-and-cleavage-first-path-family	named-mechanism-rate-law-or-unordered-snapshots	A conventional name or imported kinetic law can select a path.
record	every-state-edge-status-and-source-record-retained	intermediate-adverse-or-mechanism-row-omitted	Selected records falsely collapse the path family.
observation	value-free-structure-and-mechanism-target-seal	substrate-product-mechanism-readable-before-seal	External structures or terminology could select the survivor.

Axis	Forced form	Eliminated alternatives	Exact rejection basis
extension	fresh-retained-substrate-successor-no-extra-rule	molecule-specific-exception-or-recomputed-prefix	A special substrate rule is not depth-independent.

Adverse controls. All mandatory controls passed:

- **false_premise:** passed; expected reject the generated form lacking the complete physical carrier; observed reject the generated form lacking the complete physical carrier; receipt sha256: fcf85ccb37f220acfed618f6f5c32ec97f78706ba979582092879fd5ae996949.
- **tampered_source:** passed; expected reject a changed registered source identity; observed reject a changed registered source identity; receipt sha256: aaccbe0cf8bec56b1dc1a7e869373b2a6c63d5a3e969343a37d85f6f4ca7e044.
